Insure Your Future Now! SAVE $100.00 GET IN THE AUTO BUSINESS

Which Will You Be at 40?

BOOKKEEPER $25 A WEEK - NO FUTURE

FARM HAND $60 A MONTH

Regular tuition price $200 — Now Cut To $100

Remember this offer is good SEPTEMBER ONLY. Because of our two big schools our operating expense is less. You get the advantage of this—a present of $100—if you ACT NOW. After October 1st it will be too late.

Our method of teaching is practical. You learn in the best equipped schools in the country under the personal instruction of experts by actual work on all the various types of engines. You get a thorough knowledge of all parts of all motor cars, tractors, and stationary engines.

This year we actually expect to turn men away from October to March. Pack your grip. Come to school right now or write today before it is too late. Let us show you how you can save $100.

Fill out and mail the coupon today. START NOW on your way to a better job with a better income; a more comfortable home, with more pleasure in years to come.

MAIL COUPON TODAY—Let us show you how you can save $100 and get this valuable training in 8 short weeks.

The $12 a week mechanic who became a millionaire!

TWENTY-THREE years ago, John C. Wahl was working as a mechanic in Peoria, Illinois, at $12 a week.

To-day, he is a millionaire—having an income that runs into six figures—nationally and internationally known as the inventor of the Wahl Adding Machine, the Wahl Fountain Pen, and president of The Wahl Company, manufacturers of the famous Eversharp pencil.

It is interesting to note that the change for the better in the life of John C. Wahl came the day he saw an advertisement that hit him straight between the eyes. As he puts it, "it told how the International Correspondence Schools could make a draftsman of a fellow without interfering with his daily work." That day, John C. Wahl enrolled and started to build for the future. His present success is proof that he built well.

"Pick the line of work you like best," he said the other day, "and stick to it. Study hard and success will take care of itself. Nothing is impossible when a man really makes up his mind that he's going to get ahead."

John C. Wahl is just one of thousands of I. C. S. students who have made good in a big way. The lives of such men should be an inspiration and a guide to every man who wants a better job and a bigger salary.

If the I. C. S. can smooth the way to success for other men, it can help you. If it can help other men to go forward to better jobs and bigger salaries, or to success in businesses of their own, it can help you, too.

At least find out how by marking and mailing this coupon. It doesn't obligate you in any way to do this, but it may be the means of changing your entire life.

MAIL THE COUPON TO-DAY!

Does Cypress "The Wood Eternal" Last?! Study These Photographs of an "Ingrowing Fence"

WITHOUT A NAIL OR A PEG IN IT.

Below is a glimpse down a country highway ("de big road," as Uncle Remus called it) near Monroe, Louisiana. That fence has no posts. It was built by forcing split Cypress boards between saplings. This occurred so many years ago that nobody knows when it was, nor who was the labor-saving genius who did it. Then the trees grew, and grew, and grew.

NOW, PLEASE, study the larger photograph and see in detail how the fence looks today. Note the size of the tree, and how deeply are embedded the ends of those old Cypress rails—no one can tell how deep they extend in. Note, also, how weathered they are, yet they ring as true and sound under a hammer as though just here. Were these old Cypress boards somebody's money's worth? Why should not YOU do as well with your lumber money—whether you are building a beautiful home or just patching up the old place (OUR CYPRESS).

"THE PROOF OF THE FENCING IS IN THE LASTING."

"Build of Cypress Lumber and You Build but Once."

St. Louis Man Discovers a New Kind of Heat!

Mr. B. M. Oliver of St. Louis has invented an amazing device which ends forever the days of women's slavery to dirty, mussy coal and wood fires. It sets into the firebox of any kind of heating stove, cook stove or furnace without changes and just turning a valve it gives any degree of heat from a tiny flame to a roaring inferno—3 times the heat of coal if it is needed.

Mr. Oliver calls his invention the Oliver Oil-Gas Burner because it makes its own gas from 95% air and 5% coal off (kerosene) the cheapest fuel there is. The wonderful story of a woman's freedom from building fires, carrying heavy scuttles, emptying ashes has spread so rapidly that already over 150,000 burners are being used by American housewives. Mr. Oliver wants every woman to have the use of his invention. If you will write to him at 204S-V Oliver Bldg., St. Louis, Mo., you will receive an attractive booklet FREE that tells all about it. Mr. Oliver is now making a Special Low Price Offer. He is also looking for good, live distributors and will tell you how to earn $50 a month in full or spare time if you are interested and request his sales plans.

How "Modest Jim" Won the $50 Prize

By WILLIAM LAWRENCE
Author of "The Awakening"

"YES—I remember why they call the Big Boss 'Modest Jim,'" said the Old Timer. "It started way back twenty years ago.

"I was in my third apprentice year when Jim Hadley came to work here—a quiet, bashful boy. His father had died and he was forced to leave grammar school and go to work.

"He was never among the groups of boys dodging the boss or watching the clock nor mixed up in anything that wasn't strictly business. And he never fooled away his time with the bunch after hours, so we left him pretty much to himself. We called him 'Modest Jim.'

"One day Old Man Adams, who owned this outfit in those days, came out into the shop and tacked up a sign over the foreman's desk.

"It seemed that the Old Man and his designer had run into a stone wall or what was Greek to most of us kids those days, and was offering a prize of fifty dollars to anyone who solved the problem. He must have been up against it or he never would have asked our bunch for help.

"About two weeks later, after the rest of us had forgotten all about it, the Old Man rushed out to Jim and fairly pushed five crisp ten dollar bills into his hand. He had solved the problem.

"When the foreman asked him how he did it, he replied, 'Oh, it wasn't anything great. Only a fresh brain on a stale subject.' That's all he ever said about it. But do you know what that boy had been doing? He'd been studying with the International Correspondence Schools in his spare time. No wonder he got ahead!

"And he went right up, and up and up, until today he is the Big Boss. And the rest of us are just about where we started. He's still 'Modest Jim,' but he's earning five times as much as I am.

"Take my advice, lad, and follow along in Jim's footsteps. Don't wait until it's too late to get the special training that is so essential to success,"

Employers everywhere are looking for men like "Modest Jim"—men who want to get ahead—who are willing to devote a part of their spare time to training for advancement.

How much longer are you going to wait before taking the step that is bound to bring you a better job and more money?

Isn't it better to make your start now than to wait a year or five years and then wish you had? It certainly is!

No matter where you live, the I. C. S. will come to you. No matter what your handicaps or how small your means, we have a plan to meet your circumstances. No matter how limited your previous education, the simply-written, wonderfully-illustrated I. C. S. lessons make it easy to learn. No matter what career you may choose, some one of the 300 I. C. S. courses will surely suit your needs.

This is all we ask: Without cost, without obligating yourself in any way, put it up to us to prove how we can help you. Just mark and mail this coupon.

Quick Success in Aviation
Fascinating—Daring—Big Paying

To young men of daring, no other field of work offers such a fascination, such high pay, nor such opportunities for quick success as the field of Aviation. As yet, aviation is practically in its infancy. NOW is the time to get in.

Amazing Opportunities in Airplane Industries

In the automobile industry and in the moving picture business hundreds of men got rich by getting in at the start. They made their success before others woke up. Today, these lines offer no greater opportunities than a hundred and one others. BUT AVIATION IS NEW. Get in while the opportunity and pay are big. All over the country there is a clamor for trained men. It is not a question of pay but of getting capable men.

Here are real positions, $50 to $150 per week

AMERICAN SCHOOL OF AVIATION
3601 Michigan Ave., Dept. 1197, Chicago, III.
Without any obligation, send me your Free Book, "Opportunities in the Airplane Industry," also information about your Course in Practical Aeronautics.

Name.................................................. 
Street.................................................. 
City.................................................. State.

A Sure and Easy Way to Learn Aviation—at Home

The study of aviation is almost as fascinating as the actual work. Every lesson is full of interest. That is why it is easy to learn aviation. You do not have to make yourself study—it is like reading an interesting book that tells you things you always wanted to know. Only one hour each evening will give you the basic training in a surprisingly short time. You need only a common school education.

One of my students, James Powers, Pa., says, "I am indeed surprised that such a valuable course can be had from such practical men for so little cost."

Personal Instruction by Experienced Men

Men who have had actual experience give you personal attention. They select the lessons, lectures, blueprints and bulletins. They tell you things that are essential in everyday practice. Each lesson is easy to read and understand.

Big Book of Opportunities FREE

Send coupon at left for New Book, just out, "Opportunities in the Airplane Industry." It is interesting and instructive. It will show you many things you never knew about aviation. Due to shortage of paper we could get only a limited supply of these books—send the coupon before they are all gone.

AMERICAN SCHOOL OF AVIATION
3601 Michigan Ave., Dept. 1197 Chicago, III.
Look Here!

Are you ambitious—are you looking for the way to Success?

LEARN Modern Barbering
NEW EASY WAY
Earn $50 to $150 EACH WEEK

No matter what you are now doing, no matter how much you earn, our amazing new system of training for the barbershop profession enables you to step into this clean, pleasant, profitable business in a few short weeks. Start right in earning $50 to $150 a week.

J. E. McGregor, of New Orleans, writes: "I have never been out of a job since you sent me to one from the Post Graduate department a year ago. I have saved a nice bank account. I am glad I learned Modern Barbering with you."

F. Erbist, of Chicago, writes: "I own my own home! I have my own automobile! I am independent! Have made it all since graduating from your school five years ago."

What Moler System Means to You
Our national advertising educates the public to the safety, comfort and economy of Moler post graduate work. It makes you the sought-after barber in your locality. It keeps your chairs filled and turns profits into your pocket. You as graduate are a part of a national institution which assures steady, profitable business. Through no other method can you get this.

We Train You to be an Expert IN A FEW WEEKS
You want to get ahead — you want to make more money—big money. Our short, practical course gives you a complete training in modern barbering, including the electric hair cutter, the mechanical massage and scientific treatments. It also affords a study, if one desires, on hair and skin — it makes you an expert and expert barbers are always in demand.

Easy Work Always Busy BIG PAY
A trade that enables you to travel and see the world — one that pays in tips and commissions in addition to salaries. Moler System graduates are in great demand and have no trouble in securing good jobs.

Write for Free Book
Our catalog that we mail free tells how we enable you to earn while learning, how we put you into the best city jobs, how we equip your shop on easy payments. In fact, how we take you just as you are, make your life's work easier, better paying and more independent. We have 33 branch schools in leading cities. We have one near you.

Write anyone of the following addresses for our booklet B. Do it today.

EARLE E. LIEDERMAN, as he is today
Pills Never Made Muscles Wishing Never Brought Strength

No one can paste muscles onto your arms and shoulders. If you wish a strong, healthy body, you must work for it. And if you don't have one, you are doomed to a life of misery.

Modern science has taught us that we must keep our bodies physically fit or our mental powers will soon exhaust themselves. That is why the successful business man resorts to golf and other active pastimes.

Examine Yourself

Do you have the strong, robust body which keeps you fit at all times to tackle the daily tasks confronting you—always looking for bigger things to do? Do you jump out of bed in the morning full of pep; with a keen appetite and a longing to enter the day's activities? Do you finish your daily tasks still thrilling with pep and vitality? Or do you arise only half awake and go through a languid day?

PEP UP!

Don't let it get you, fellows. Come on out of that shell and make a real he man of yourself. Build out those skinny arms and that flat chest. Let me put some real pep in your old backbone and put an armor plate of muscle on you that will make you actually thrill with ambition. I can do it. I guarantee to do it. I will put one full inch on your arm in just 30 days and from then on, just watch 'em grow. This is no idle boast. It's the real works. A genuine guarantee. Come on now. Get on the job and make me prove it.

Send For My New 64 Page Book—

Muscular Development

It Is Free

This will show you some of my remarkable achievements. Sixty-four pages with dozens and dozens of full page photographs of myself and a number of my pupils. Read what they say about my system. Don't take my word for it. This book will be an impetus, an inspiration to every red-blooded man. All I ask is the price of wrapping and postage—10 cents. Remember this does not obligate you in any way; so don't delay one minute. This may be the turning point in your life. Tear off the coupon and mail at once—now, while it is on your mind.

EARLE E. LIEDERMAN
Dept. 2010, 305 Broadway, New York City

Dear Sir:—I enclose herewith 10 cents for which you are to send me, without any obligation on my part whatever, a copy of your latest book, "Muscular Development." (Please write or print plainly.)

Copy this Sketch

Get Draftsmen’s Pocket Rule Free

and Get This Rule FREE

and I also will tell you how you can get a $90 Drafting Course FREE

Make a copy of the sketch above. Send it to me at once and I will mail you free and prepaid the Draftsmen’s Ivorine Pocket Rule. I will also send you an offer I am making whereby you may have an opportunity of getting without any expense to you a $90 Drafting Course. The only condition of this offer is that you must be at least 16 years old. I am making this offer to find young men interested in drafting. Now is the time to learn drafting as thousands of draftsmen are in demand at big salaries. I will train you to become a draftsman and designer in a short time by my own personal method of giving regular, practical drafting-room work. You remain right at home.

Salaries up to $250 and $300 a Month

I don’t give you just a “course in drafting” and then let you shift for yourself. I guarantee to train you until you are placed in a position paying you a salary of at least $250 a month. I can make this guarantee because I limit and select my students. I know that the men I take as students if they will follow my practical instruction, are certain to land a big money-earning job. So, write to me today. Whether you copy the sketch or not send for my free book anyway.

Write Today!

The coupon shown below or on a postcard or letter will bring my book telling you all about the career of a draftsman and all about other very exceptional offers I am making, such as, for instance, a fine folding drafting table which I am giving now to all my students. Write at once. Use this coupon, or send postcard or letter.

Chief Draftsman Engineer’s Equipment Co.
1951 Lawrence Ave. DIV. 13-37 CHICAGO, ILL.

Without any obligation whatsoever, please mail your book, “Successful Draftsmanship”, and full particulars of your liberal “Personal Instruction” offer to few students.

FREE This Draftsman’s Working Outfit

These are regular working instruments—the kind I use myself. I give them free to you if you enroll at once. Don’t delay. Send coupon, postcard or letter for my free book.
If You Want Bigger Pay Make This FREE TEST

There's a sure way to increase your earning power. And here is such an opportunity. Look into it—you may recognize it as your one chance to earn the biggest money of your life.

ARE you ready for a shock? Then, let me tell you that if you have average intelligence and can read and write, there is a quick and easy way for you to earn enough money to satisfy any average ambition. And after reading this offer, if you do not quickly make more money, you have no one to blame but yourself.

Don't take my word for it. By a simple test—you can make in the privacy of your home—you will know that every word I say is true—or otherwise. The test does not obligate you or cost you one penny. But make it! Then judge for yourself. It has proved to be THE opportunity for thousands. They have found the way to bigger pay—and now earning from five to twenty times as much as formerly. And the beauty of it is they enjoy every minute in the day's work. They are their own bosses.

The thousands who have made this test before you, and who are now making the money you would like to make, are now salesmen. Ninety-five per cent once thought they were not "cut out for selling" that salesmen were "born" and not made. They found it was a fallacy that had kept them in the rut. They discovered that anyone with proper training can sell, and they are making from $5,000 to $10,000 a year, because they had the vision to recognize opportunity.

Thousands Have Proved It!

For instance, Ellis Summer Cook, 20 E. Jackson Blvd., Chicago, left a $25 a week job and last year made $3,000! H. D. Miller, another Chicago boy, was making $100 a month as a stenographer in July 1922. In September, 3 months later, he was making $100 a week as a salesman. W. P. Clemney of Kansas City, Mo., stepped from a $150 a month clerkship into a selling job at $500 a month. He is making $850 a month now. M. V. Stephens of Albany, Ky., was making $25 a week. He took up this training and now makes 5 times that much. J. H. Cash of Atlanta, Ga., exchanged his $75 a month job for one which pays him $500 a month. O. H. Malfroot of Boston, Mass., stepped into a $10,000 position as a SALES MANAGER—so thorough is this training. All these successes are due to this easy, fascinating and rapid way to master certain invincible secrets of selling.

Simple as A B C

Sounds remarkable doesn't it? Yet there is nothing remarkable about it. There are certain ways to approach different types of prospects to get their undivided attention—certain ways to stimulate keen interest—certain ways to overcome objections, batter down prejudices, outwit competition and make the prospect act. If you will learn these principles there is awaiting you a brilliant success and more money than you ever thought of earning.

As you will see by the affidavit to the left thousands of reputable selling organizations in America turn to this Association for their Salesmen. We can never take care of all the demands made on us for this better type of trained salesman.

Make This Free Test at Once

Don't turn this page until you have clipped the coupon, filled it out, and sent it on its way. The test is contained in a free book, "Modern Salesmanship" which will enable you to test your ability at home, and full information about the N. S. T. A. System of Salesmanship Training and Employment Service.

DRAW CARTOONS
Cartoonists Trained by W. L. EVANS
MAKE MONEY

Some of the cleverest cartoonists in America today are former students. They studied during their spare time and are now making good money. Cartoonist Evans’ system of teaching is so simple, easy and practical that it is hard to learn to draw originals. The school has a long established reputation and is recommended by well-known cartoonists because they know the students are handled right.

If you like to draw, send us a sample of your work, either a copy or an original. You may have more ability than you think. We will send you a portfolio of cartoons and full details about the school.

PM Oct. 23.
Stop Wondering How I Teach Piano; I’ll Show You, FREE!

Year after year you’ve seen my advertisement in all the leading publications, offering to teach you piano in quarter the usual time. Year after year my school has grown and grown until now I have far more students than were ever before taught by one man. In 1922 over two thousand students graduated from my Piano or Organ course and received their diplomas.

Yet when I first started giving piano and organ lessons by mail in 1891 my method was laughed at. Could my conservatory have grown as it has, obtained students in every State of the Union, and in fact, practically every civilized country of the world, unless it produced very unusual and satisfying RESULTS for its students? See for yourself what it is that has brought my method so rapidly to the front. Write for free booklet and sample lessons.

Now, for the first time, you can obtain sample lessons without charge. In the past, I have always been opposed to sending out free lessons, even to persons who were seriously interested in my course. But my friends have insisted that I give everybody a chance to see for themselves just how simple, interesting and DIFFERENT my lessons are, and I have consented to try the experiment for a short time. Simply mail the coupon below or write a postcard, and the 64-page booklet and sample lessons will go to you at once absolutely free and without obligation.

Within four lessons you will play an interesting piece on the piano, or organ, not only in the original key, but in all other keys as well.

Most students practice months before they acquire this ability. It is made possible by my patented invention, the Colorotone. Another invention, obtainable only from me, is my hand-operated moving picture device, Quinn-dex. By means of Quinn-dex you actually see my fingers in motion on the piano, and can learn just how to train your own fingers.

When I say that I can teach you piano in quarter the usual time, do not think that this is too good to be true. Modern inventions and improved methods have accomplished just as great wonders in other branches of education. You at least owe it to yourself to investigate. Send coupon or postcard at once, before the offer of free sample lessons is withdrawn.

QUINN CONSERVATORY STUDIO
PM70. 588 Columbus Road
BOSTON, 25, MASS.
FREE TRL LESSON

Send the coupon and get this lesson in Drafting. It will show you how well qualified you are to take up this great profession. Also shows the Chicago Tech. method of instruction by mail. Find out about all this before you enroll or pay a penny. Mail the coupon now.

DRAFTING

Train in Spare Time—Double Your Income

Put yourself in the big pay class. Get expert training in Drafting under the Chicago Tech. experts. Be master of a profession in which there are not enough highly skilled men to fill the paying jobs that are open. The Chicago Tech. method of training men by mail gives you a finished, practical education in Drafting—in your own home in spare time. Just a few hours a week and you get a thorough training under the personal direction of experts.

Get Your Instruction Under Practical Men

Enrolled at Chicago Tech. you are instructed by practical engineers—not by mere theorists. These men have been "through the mill." They know just what problems you will have to solve in actual practice and show you how to master them. No time wasted on unnecessary studies. You graduate early and can stand beside men of long experience. You get this training at a low cost and on easy terms.

The Big Job Will Be Ready When You Are

Everywhere there is a call for capable Draftsmen—men who can take hold of important work and see it through. Men of this kind are always in demand at high salaries by railroads, manufacturers, architects, contractors, electrical works and other big industries. Chicago Tech. training which you can get by mail or in day or evening classes at the College in Chicago will make you the man wanted for the big positions that are open to highly trained men.

Chicago Tech. Men Succeed

Every year Chicago Tech. graduates step into the ranks of successful men. You find them everywhere employed at high salaries or in business for themselves— independent and prosperous because they have the practical knowledge that enables them to handle the kind of jobs which command big pay.
New Easy Way to DRAW

Wonderful new method makes it possible for anyone to learn Illustrating, Commercial Designing and Cartooning. Many of our students never touched a drawing pencil before starting our course. The simplicity of this method is astounding. You will be amazed at your rapid progress. It’s fun learning to draw this way—at home in spare time, yet all your work receives the individual criticism of one of America’s most successful artists.

$50 to over $300 a week—that is what good commercial artists earn. Tremendous demand now for trained artists. Learn to draw and earn big money as an artist.

Send for FREE Book

Just printed—new, handsomely illustrated book which describes wonderful opportunities in Commercial Art, and explains this amazing new, easy method. What Are You Going To Do About It?

You want more money. A doubled pay check would do a lot of things for you and yours! Then why don't you quit dreaming about it, get into the electrical game where there is BIG MONEY and BIG OPPORTUNITY and make your dreams come true!

$75 to $200 a Week

You can earn from $75.00 a week up to $200.00 a week. That's how the pay runs in this new, fast expanding and tremendously fascinating field of electricity. Seventeen different branches and ten times as many jobs as there are men to fill them! Do you realize what that means to you? It means that in a few months you can slip from your present job right into one of these regular he-man big-pay positions and never lose a day.

No College Education Needed

Not with the training we offer you! This is the only course that gives you the combined theoretical and practical training you must have before you can be a successful practical electrician—you cannot fail.

This practical electrical training is prepared by not one man with a narrow one-man's viewpoint, but by 22 of the brainiest, most successful electrical experts ever drawn from Technical and Practical Sources.

We give you complete mastery of electricity—we qualify you as electrical expert to boss big jobs—fit you right into the kind of a job you want—and do it in the shortest time—at lowest cost—with the most binding guarantee of results ever offered.

Find Out All About It!

Investigate! Find out about the thousands who have taken this course in preference to all others and made good! Find out about the Free Electrical Library—alone worth $25.00—the Free Drafting Course worth another $30.00—the wonderful Free Outfit including high grade electric motor, Wheatstone Bridge, etc.—the most scientific and complete outfit ever furnished any electrical student. Let us lay all the cards right on the table. Then you can decide as you wish.

Send the More Money Coupon Now

Brings full details, enables you to decide once and for all whether you want to become an electrical expert at a big salary or stay where you are. Don't put off prosperity. Act Now.

International Body Works, 914 W., Ohio Street, Evanston, Ill.
SHAKING hands all round with the fellows that had made life pleasant for him during training, Paul A. Sperry of 1863 Stanwood Ave., Cleveland, Ohio, said, "I travelled 4000 miles to get National Automotive training! I was thinking of going to another school, but when I heard about National, I knew it was the place for me." He was筱ching over with enthusiasm and full of ambition when he left N. A. S. for he knew that he possessed the knowledge and training that would enable him to get a high-paying job as automotive expert. He had insured his future success by National training.

Only One in a Hundred

Paul Sperry is just one of hundreds of men who come to Los Angeles to get a better and more thorough course of automotive training at National. Men with auto schools at their very door make this wonderful trip to California because of the special advantages offered by National, and because of the great opportunities for quick success that await them in this fast-growing Western state. Life is at its best in California. Automotive training conditions are at their best at National.

Many Take National Training For Post-graduate Course

You could ask for no better evidence to prove the value of National training. Every year men come to National for a post-graduate course. They want the thorough training in every branch of automotive engineering, the special, advanced electrical and ignition work for which National is famous.

Even Better Training Facilities Now

The new National Automotive building erected at a cost of more than $300,000 offers you many special training advantages. It is situated right across the street from 139-acre Exposition Park, yet only 20 minutes trolley ride from the heart of the city. All the advantages of the park are FREE to you—ball grounds, swimming pool, gymnasium, etc. And in N. A. S. building many entertainment features have been provided—roof garden, gymnasium, basketball and handball courts, reading rooms, etc.

Sun-Lighted Training Shops

Every training shop in National Automotive is fitted with great big windows, through which come plenty of California sunshine and fresh air. Training conditions are ideal at National—work and play go hand in hand. You are kept interested and happy so that you can accomplish more than you ever dreamed you could in a few short months.

New, Up-to-Date Equipment

More than $800,000 has been expended in equipment alone. Chassis, motors, electrical equipment, machine shops, modern garage equipment, vulcanizing machinery, and all sanitary facilities are of the highest quality.

Personal Instruction by Experts

Because National Automotive does not attempt to turn out graduates by the thousands, but rather to limit attendance, you are assured of special attention while training. Expert automotive engineer instructors show you how; explain every detail; help you every step of the way.

Send for FREE Auto Book

Read the many interesting stories of how men just like you have gained success, money and happiness through National training. This free book explains everything. How you can earn your room and board while learning. How National places hundreds of men in big-pay auto jobs. Mail the coupon today for this big, free, illustrated book.

"Don't tell me you never had a chance!"

"Four years ago you and I worked at the same bench. I realized that to get ahead I needed special training, and decided to let the International Correspondence Schools help me. I wanted you to do the same, but you said, 'Aw, forget it!' You had the same chance I had, but you turned it down. No, Jim, you can't expect more money until you've trained yourself to handle big work."

There are lots of "Jims" in the world—in stores, factories, offices, everywhere. Are you one of them? Wake up! Every time you see an I. C. S. coupon your chance is staring you in the face. Don't turn it down. Right now more than 180,000 men and women are preparing themselves for bigger jobs and better pay through I. C. S. courses. You can join them and get in line for promotion. Mark and mail this coupon, and find out how.

Get The Pay of the Man Higher Up!

You are not the kind of man who is always going to take orders from others. What you want is to give—not take orders. You want the bigger pay that goes with that kind of work; and here in this great Library of Practical Books for Self-training, you are offered the sure way of getting what you want.

In these books you will find a wealth of the very information you need to GET MORE MONEY in the trade you are following. There are thirteen sets, each set devoted to one particular line of work. Each set is written by a group of highly trained practical experts who cover the entire subject from a technical standpoint yet do it so clearly and illustrate every thing so plainly with diagrams and blue prints that you can't fail to understand every word.

Thousands of men who have read and studied these books have gained by it. If you were to get only one idea that helped you prove an UNUSUAL knowledge of your work, that one idea would be worth what a dozen sets would cost you. Every book is simply packed with such ideas and helpful information.

Reference Books That Make Happy Days of Pay Days

Free Consulting Membership

A resident consulting staff of from 15 to 20 practical experts is waiting to solve for you any difficulty that you may have. A letter or a wire to American Technical Society will bring you an immediate answer and the solution to your problem. This advisory service of practical men and reference library will enable you to handle successfully any job in your line. These men know all the latest methods and the newest and best ways of doing things. Let this pay-taking consulting staff be YOUR ALLIANT PARTNER. Use this service daily if necessary.

This free consulting membership offer is good for a limited time only and can be withdrawn without notice.

Use Books FREE For One Week—Send No Money

—just fill out the coupon. After you receive the full set of books, express collect, read them over and test them out for seven days. If you don’t want them, send them back at our expense. If you decide to keep them, you will do for you what they have done for more than 200,000 others, pay $2.80 within one week and $3.00 each month thereafter until the special price is paid. This amounts to only ten cents a day. Mail coupon NOW if you want a bigger, better job at higher wages.

Here’s your opportunity, if you want to EARN MORE MONEY. Remember, we are taking all the chances—you pay NOTHING unless you are absolutely satisfied after seeing the books. Isn’t this the fairest proposition that was ever put up to you?

American Technical Society, Dept. X-719
Chicago, U.S.A.

@A.T.S. 1923
WANTED

RAILWAY POSTAL CLERKS
STEADY POSITIONS

These are steady positions. Strikes, poor business conditions, lockouts or politics will not affect them. Railway Postal Clerks get their pay for twelve full months every year. There is no such thing as "HARD TIMES" in the U. S. Government Service.

$1,600 TO $2,300 A YEAR

These Railway Postal Clerks will get $1,600 the first year, being paid on the first and fifteenth of each month. ($66.67 each pay day.) Their pay will be increased to a maximum of $2,300 a year. ($95.84 each pay day.)

PAID VACATION

Railway Postal Clerks are given a yearly vacation of 15 working days (about 18 days). Also they usually work a week and have a week off duty or in the same proportions. During this off duty and vacation, their pay continues just as though they were working. When they grow old they are retired with a pension.

TRAVEL ON PASS

They have a railroad pass for traveling while on business. They have an excellent chance to see the country.

COMPARE

Compare these conditions with your present or your prospective condition, perhaps changing positions frequently, kicking around from post to pillar, no chance in sight for PERMANENT increase or advancement; frequently "laid off" and the yearly average salary very low. DO YOU EARN $1,600 EVERY YEAR? HAVE YOU ANY ASSURANCE THAT A FEW YEARS FROM NOW YOU WILL GET $2,300 A YEAR?

POSITION IS EASY TO GET

These positions are not hard to get. Country residents and city residents stand equal chance. Good common sense education is all that is needed. Experience is unnecessary, and political influence is not used.

GET FREE LIST OF POSITIONS

Fill out the following coupon. Tear it off and mail it today—now. At once. We will immediately send you a free list of U. S. Government positions now obtainable, also free copy of our illustrated book, "How to Get a Government Position," we will also explain to you our proposition of FREE COACHING for these coming examinations—DO IT NOW—This investment of two cents for a postage stamp may change your entire future life.

Free Railroad Fare

WE PAY YOUR RAILROAD FARE TO CHICAGO—the Electrical Center of the World—from any place in the United States. Grasp this opportunity to see the country at our expense. Don't stick in one spot—travel—get experience. Come to Coyne—the largest electrical school in the country specializing in electrical instruction only. Learn electricity in 3 months. Fit yourself for a big paying job. Get a complete training so you can make big money as Power Plant Operator, Superintendent, Telephone man, Construction worker, auto, truck or tractor electrician, battery man, radio expert, or you can go into business for yourself as electrical contractor, dealer, auto ignition or battery expert and make from $5,000 to $20,000 a year. Hundreds of our graduates today are making big money and you can do the same if you grasp this opportunity—act now.

Fit Yourself for a Big Paying Job

No books or useless theory. You are trained on $200,000 worth of electrical equipment. Everywhere from door bells to power plants. You work on motors, generators, wiring, autos, batteries, radio, switch-boards, power plants—everything to make you an expert ready to step right into a position paying from $45 to $100 a week.

No Previous Experience Necessary

You don't need to know anything at all about electricity to enter Coyne. Nor do you need to have any considerable schooling. We have no classes, use no books. We teach by the most practical methods. Our instructors, all electrical experts, work with you in the actual doing of the thing to be learned. They tell you what to do, how to do it, and why. You pass along from the simplest task on signal bells to the finishing work on the monster dynamos, just as fast as you can learn. (And you can spend as much time over 3 months as you wish, without extra cost.) Here you work with your hands just as you will when you get on the job after graduation. The Coyne method of teaching practical Electrical Engineering is not only the most efficient, but the simplest and quickest known.

Radio Course FREE

We give you free a course in Radio—the marvel of the age. Constructing, installing and operating. You can build your own receiving set. The complete electrical course gives you practical training in Circuits, House Wiring, D. C., A. C., Armature and Stator Winding, Drafting, Auto, Truck and Tractor Electricity, Battery Building and Repairing and Radio. In addition you receive Free, a Life Membership which enables you to stay as long as you want or come back for further training at any time without charge.

Earn While You Learn We help students to secure jobs to earn a good part of their expenses while studying.

Send Coupon Today!

ELECTRICITY
Lifts Men Out of Small Pay Jobs

Are You Satisfied With Your Job?
Have You Got all the Money You Want?
If Not Send for MY BIG NEW FREE BOOK and Learn How to

Earn $3,500 to $10,000 a Year
As an Electrical Expert

Trained "Electrical Experts" are in great demand at the highest salaries, and the opportunities for advancement and a big success in this line are the greatest ever known.

"Electrical Experts" earn $70 to $200 a week. Fit yourself for one of these big paying positions. Big jobs everywhere are waiting for trained men to fill them.

Learn at Home to Earn $12.00 to $30.00 a Day

Today even the ordinary Electrician—the "screw driver" kind—is making money—big money. But it's the trained man—the man who knows the whys and wherefores of Electricity—the "Electrical Expert"—who's picked out to "boss" ordinary Electricians—to boss Big Jobs—the jobs that pay. You, too, can learn to fill one of these jobs—spare time only is needed. Be an "Electrical Expert"—Earn $70 to $200 a week.

I Give You a Real Training

As Chief Engineer of the Chicago Engineering Works, I know exactly the kind of training a man needs to get the best positions at the highest salaries. Hundreds of my students are now earning $3,500 to $10,000 a year. Many are successful ELECTRICAL CONTRACTORS. Every branch of Electricity is open to you when you have finished my course. My experience as a practical engineer and my most unusual course makes this possible. I even have special lessons for those who want to go into business for themselves.

FREE—Electrical Working Outfit—FREE

I give each student Outfit of Electrical Tools, Materials and Measuring Instruments absolutely FREE. I also furnish them with all supplies, including examination paper, and many other things that other schools don't furnish. You do PRACTICAL work—AT HOME with this Outfit. You start right in after the first few lessons to WORK AT YOUR PROFESSION in a practical way.

Age or Lack of Experience No Drawback

You don't have to be a College Man; you don't have to be a High School graduate. If you can read and write English, my course will make you a big success. It is the most simple, thorough, and successful Electrical Course in existence, and offers every man, regardless of age, education, or previous experience, the chance to become, in a very short time, an "Electrical Expert," able to make from $70 to $200 a week.

Your Satisfaction Guaranteed

So sure am I that you can learn Electricity—so sure am I that after studying with me you, too, can get into the "big money" class in electrical work, that I will guarantee under bond to return every single penny paid me in tuition if, when you have finished my course, you are not satisfied it was the best investment you ever made.

Get Started Now—Mail Coupon

I want to send you the "Vital Facts" of the Electrical Industry, including my Electrical Book, Proof Lessons, and a sample of my guarantee bond all FREE. These cost you nothing and you'll enjoy them. Make the start today for a bright future in Electricity. Send in the coupon—NOW.

CAMERAS AND PHOTO SUPPLIES

EARLY Money With Your Kodak. You don't know what you are missing if you use it to its full capacity? Are you making it pay you a dividend? If so, How? How many people ask you for negatives? Answer: None. Why? Because you are not satisfying the gray-scale and white prints representing what you visualize when your negatives are shuttered. The inventive, the emotional urge of color, the perfection of the camera is the result of photographers and others have learned that color is easily added to a print as tints are to a grey-and-white Greeting card. Please, self-affiliation, Japanese Transparent Waters, Color photography, anything is possible in color prints. Ask your dealer for them, or send us $1.00 for a Complete Set. 15 color, with full instructions. Free—with the above offer we will send you one of our own prints, up to 5x7, absolutely free, showing the charm and beauty of a well-known Kodak Scene, as a matted photograph. Add stamps for return of your print. Please do not send unsolicited manuscripts, they are not standard everywhere for more than two decades. Address, Kodak Color Co., Peerless Building, Rochester, N. Y. U. S. A.

UNPATENTED Ideas can be sold. I tell you how and help you make the sale. Pay me 15% of the proceeds. Jennifer Building, Washington, D. C.

SEND sketch for search report. Get my latest rates. Frank Fuller, Washington, D. C.

INVENTORS desiring patents, read the free treatise: "Reducing Inventions to Propriety." Hapgood, Garrett, 426 F. Street, Washington, D. C.

BOOK on inventions, patents, trade marks, copyrights, patents, etc.: excellent references. Twenty-three years experience. Bobb, Bobb & Company, 418 Blaine Building, Cleveland, Ohio, 811 McCallum Bldg., Washington, D.C.

FOR INVENTORS

INVENTORS. If you have an invention which you wish to patent you can write quickly and economically, for mailing in regard to the best way of obtaining protection. Please send sketches or a model of your invention and a description of the service, explaining its operation. All communications are strictly confidential, and very fast practice, extending over a period of many years. Write or call on us for advice in regard to patentability without obligation. Our service is on a fee basis. Our Book on Patents is sent free on request. This explains our methods, terms, etc., in regard to Patents, Trade Marks, Foreign Patents, etc. "Scientific American" contains Patent Office issues from time to time of general interest to inventors and particulars of recent patents in all classes: Mann, & Co., Solicitors of Patents, 423 Wooburn Blvd., New York, N. Y.; 818 W. Walnut St., Washington, D.C.; 801A Tower Bldg., Chicago, Ill.; Holubard Bldg., San Francisco, Calif. INVENTORS: Have you FULLY experienced on patent matter, better learn one who is free from those usual patent values. Assistance. A. D. Frazier, 26 South St., Woonsocket, R. I.

COMPLETE instructions for getting Patents, applications blank, sample drawing, all for free; W. R. Watt, 280 South Pasaden, Calif.

APPLICATIONS free on request: gives valuable information and advice for all inventor's, manufacturers, engineers, etc. Frank Lehmann, Registered Attorneys and Engineers, 13-P Park Row, New York.

INVENTORS, my fees in installments. Advice free. Frank Fuller, Washington, D. C.

INVENTORS, models and experimental work. Kenyon, 51 Mercer St., New York.

PATENTS. Send in. Book the inventor keeps free. See LABEL. See LABEL.

WANTED to buy good patent. Simon, 1259 International Life Building, St. Louis, Mo.

INVENTORS—Send your ideas for manufactur- ing, development of new products, metal and iron-fabricating plant. Filing patent, to be granted, registering trademark, preferred. Liberal payments for successful suggestions. See Chemistry Co., 255 Spring Grove Ave., Cincinnati, Ohio.

UNPATENTED Ideas can be sold. I tell you how and also help you make the sale. Particulars free. Write W. T. Greene, Jennifer Building, Washington, D. C.

INVENTORS: "Complete" free on request: gives valuable information and advice for all inventors, manufacturers, engineers, chemists, etc. See(Address) to attorney and Engineer, 15-P Park Row, New York.

FOR INVENTORS, write for free copy of Modelcraft. B. G. Clyne, St. Louis, Mo.

PATENTS FOR SALE

UNITED STATES. Patents, Numbers 1,373,700 and 1,443,688. Machines for assembling and welding paper and copper, sheet or twisters. Economical manufacture: unlimited market. W. C. Avery, Boston, Mass.

FOR SALE on Royalty—Paraffin radiator casting equipment, cost $10,000. This equipment can serve many radiators. Next in appearance. Patent pending. Address B. R. Lunde, Box 14, Chicago, Ill.

SHOCK Absorber for automobiles, hydraulic, cheap to make. Morton Francis, Tannerville, N. Y.

INVENTORS: write us for our book, "How to Obtain a Patent," which clearly sets forth what may be patented and the steps to be taken to protect an invention: it describes the procedure in patent offices, the assignment of licenses and trade marks, and gives many useful facts which every inventor should know; many persons well versed in patent matters have pronounced the book that they never had; it is written so you can understand it. IV. H. J. Talbert & Company, 495 McBign Bldg., B. C., Akron, Ohio.

LET me develop that idea or model you contemplate inventing. Address for terms, R. J. Watlington, Big Fish Ave., Akron, Ohio.

DON'T let your ideas go to waste. Write me now on the subject of Inventions. Before patenting secure my opinion as to patentability, including copies of nearest patents, based on, on your model, as stated above, etc., and I will send you a complete specification for $3. Send sketch, Ralph Burch, Registered Patent Attorney, Jennifer Building, Washington, D. C.

INVENTORS' Models and Experimental work. Kenyon, 51 Mercer St., New York.

INVENTORS—Send for the model inventor keeps free. See LABEL. See LABEL.

IMPROVED clothes dryer for rainy days. A. B. Hanson, 506 W. 45th St., Chicago, royalty. M. B. Halliday, Walthill, N. Y.
STEP OUT from the CROWN
You can be a Dental Laboratory EXPERT!

What's the use of training for the old, over-crowded trades? If you're going to prepare for big-salaried jobs or a profitable business of your own GET INTO THE NEWEST PROFESSION — "Laboratory Dentistry." Biggest opportunity for success of the century, because there are ten times as many jobs as men to fill them, because there are a dozen cities crying for Laboratories for each EXPERT capable of operating one!

60,000 DENTISTS NEED LABORATORY WORK!
Only a few hundred Laboratories in all the U. S. — most of them in Chicago and New York. Dentists can't afford to do their own mechanical jobs. They can buy the services of a Laboratory Expert at $3.00 an hour and sell their own time at $6 to $15 an hour. Dentists will encourage you to learn mechanical work, start a "lab" of your own, give them quicker service than sending to Chicago or New York. Dentists can't wait and keep their patients waiting.

OPEN a LABORATORY of your OWN!
Joe Wilt of Chicago started a couple of years ago ALONE. Today he employs 60 Experts and his Laboratory is one of the biggest in the U. S. A. A. in Minneapolis is reported to employ 125 men and to clear $40,000 to $50,000 a year. Start with the same tools you use in this big SCHOOL-LABORATORY. Start your own Laboratory with as little as $100 investment. No milk to profits you can make in this wonderful new profession.

INTERESTING CATALOG—FREE!
Right this moment we can place 150 Dental Laboratory Experts in locations where they can make $5,000 to $7,000 a year. But you won't get the advantage of these OPPORTUNITIES until you're TRAINED. Catalog tells you how quickly and easily you can get ready, how hundreds of others have SUCCEEDED! Tells you how you can study in a few months BY DOING ACTUAL LABORATORY JOBS under world's greatest Mechanical Dentist! Brings you FREE R. R. Fare offer and other big inducements. Write for free Catalog today!

McCarrie School of Mechanical Dentistry
Dept. 101, 34-36 W. Lake St., Chicago

Jobs at $60 to $125 a Week!
In a business where there are many times as many jobs as Experts, salaries are high, hours are easy, opportunities are everywhere! McCarrie-trained Experts always get the preference — Dentists everywhere recognize the high-standing of our graduates. No books here — learn with tools and hand-mold — get ready in 12 weeks for your big opportunity! Mail Coupon today!
NEWLY patented invention for repairing, tightening and reinforcing bicycles and motorcycles. Prevent the most bothersome cracks in clamps, bearing cups and easily manufactured from rubber. Outright or royalty. W. C. Hanney, Elbridge, N. Y.

If He Had Passed It Up

He Would Still be a Laborer at $2 a Day. No Money, Nothing Ahead but Hard Work, Longer Hours—and Regrets. But He Didn't Pass It Up

He decided to learn Mechanical Drawing. He buckled down to work with the Columbia School of Drafting. When he had a quiet half hour to spend he spent it—as a wise man spends money—to get full returns.

MADE $275 EXTRA IN 3 DAYS. He recently received $275 for one drawing that only took him three days to draw.

NOW HOW ABOUT YOU? Are you working up hill or down? Count the money in your pay envelope next pay day. You'll find the answer there.

MAKE $35 TO $100.00 A WEEK. We will train you to be an expert Draftsman in your spare time at home by mail. There's lots of room for you if you act now.

PROMOTION IS QUICK. WE'LL QUALIFY YOU for a high-salaried position in the drafting field and keep you in touch with openings for Draftsmen in the big machine shops, industrial plants and United States Government departments. Men who start as

Draftsmen are often advanced to Chief Draftsmen, Chief Engineers, Production Managers and so on.

GET THE RIGHT TRAINING. Mr. Claffin, the founder and director, stands personally in back of the Columbia School of Drafting. You spend no time in long-winded theories—useless and expensive to you. You start on actual drawing work the day you receive your first lesson.

YOU NEED NO PREVIOUS TRAINING. The course is easy to understand and easy to follow. Many students are qualified even before they complete the course.

SUCCESS CALLS MEN OF ACTION ONLY. If you are a man of action clip the coupon now and show that you are a man of action. Keep right on top of this opportunity to make real money. Don't go looking for a pair of scissors. Tear the coupon off and mail it right now. We have a special offer for those who reply promptly.

Get started now.

What We Give You

PRACTICAL PROBLEMS. You are carefully coached in practical drafting work.

WE HELP YOU GET A JOB. We help you get a position as a general Draftsman as soon as you are qualified.

PERSONAL INSTRUCTION AND SUPERVISION THROUGHOUT THE COURSE. You receive personal instruction and help of Roy C. Claffin, president of the Columbia School of Drafting and a practical Drafter of many years' experience.

DRAFTSMAN'S EQUIPMENT. We furnish you with a full set of Drawing Equipment and Drafting Instruments as shown in the section.

CONSULTATION PRIVILEGES. You may keep both sets on completing the course.

DIPLOMA. The diploma is given you on completing the course attests to your proficiency in Drafting and will prove the entering wedge to success.

FREE SUBSCRIPTION TO DRAFTSMAN'S PUBLICATION "THE COMPASS." You are given a subscription to our helpful, inspiring publication, "The Compass."

U.S. Civil Service Commission Needs Draftsmen

The following are a few of the many positions open in Government Departments from time to time. The salaries are starting salaries, subject to increase. Practically all of them carry a bonus of $240 a year additional.

Architectural Designer $4,000, Chief Draftsman (Aeronautical Naval Aircraft Factory), per year.

Aeromedical Draftsman—Field Service of Naval Department, $5.20 per day to $12 per day.

FREE BOOK Send in this coupon today. We will send you our book, "Drafting—Your Success," which tells you all about our new method of teaching Mechanical Drawing and gives full details of our special offer to those who reply promptly.

FREE Subscription to Draftsman "The Compass".

PLAY PIANO BY EAR
Be a Jazz Music Master

Anyone who can remember a tune can easily and quickly learn to play popular jazz or American rhythm by ear at a very small cost. The New Niagara Method makes piano playing wonderfully simple.

No matter how little you know about music—even though you "have never touched a piano"—if you can just remember a tune, you can quickly learn to play by ear. I have perfected an entirely new and simple system. It shows you so many little tricks that it just comes natural to pick out on the piano any piece you can hum. Beginners and even those who could not learn by the old, fashioned method grasp the Niagara idea readily, and follow through the entire course of twenty lessons quickly. Self-instruction—no teacher required. You learn many new styles of bass, syncopation, blues, fill-ins, breaks and trick endings. It's all so easy—so interesting that you'll be amazed.

A Simple Secret to Success
No need to devote years in study to learn piano nowadays. Special talent unnecessary. Every lesson is so easy, so fascinating that you just can't keep your hands off the piano. Give it part of your spare time for 90 days and you will be playing and entertaining almost before you realize it. No tiresome scales, no arpeggios to learn—no do-re-mi—no difficult lessons or meaningless exercises. You learn a bass accompaniment that applies to the songs you play. Once learned, you have the secret for all time—your difficulties are over and you become Master of the Piano.

Even talented musicians are amazed at the rapid progress of Niagara School students and can't understand why this method was not thought of years ago. Naturally, the Niagara Method is fully protected by copyrights and cannot be offered by any other school. A special service department gives each pupil individual attention.

Ronald G. Wright, Director, NIAGARA SCHOOL OF MUSIC, Niagara Falls, N. Y.

Decide to Begin Now!
Send in your application with a few easy, fascinating lessons and see how quickly you "catch on" and learn to play. You will be amazed, whether you are a beginner or an advanced student.

Write for Interesting, Illustrated booklet, "The Niagara Secret"—it describes this wonderful new method of playing piano by ear. This booklet sent FREE. Enclose $6 in stamps and you'll also receive an interesting chart.

CLIP THIS COUPON NOW

Niagara School of Music, Dept. 550, Niagara Falls, N. Y.

Age........................ Ever take piano lessons?............ How many?.............
Look at the pictures on these two pages. Twenty thousand Sweeney trained men own garages, tire shops, vulcanizing and service shops, just like these

**You can be your own boss.** You can be independent. It is easy to start in business for yourself. Then you don't have to bow down to some employer and do work you don't like. Sometimes it looks like carpenters, plasterers, etc., get big wages, but when hard times come they are out of work. I say work for yourself. Then you are not bothered by strikes, lockouts, factories closing down. **Own your own business; work for yourself with enthusiasm, not drudgery.** It's the yearning of every young man TO BE HIS OWN BOSS, and Sweeney makes it possible. How would you like to see your name above the door of a neat and profitable garage like one of those shown in the pictures?

**Sweeney trains men in eight weeks** in the auto and tractor business. I have had over 60,000 graduates. I estimate 30,000 are in business for themselves. You don't need previous experience. These men had no previous experience. You don't need any capital to speak of. There are opportunities everywhere. Other fellows with money are often looking for trained men to handle the mechanical end as partners. These men had much money. But they had Sweeney training and made good.

The picture on the opposite page is of John Boyer's garage at Milford, Illinois. John says: "Having a good business; busy all the time." Look at the National Garage. Roy Atkinson sent me this picture from Everett, Mo. "Worked on a farm," says Roy. "At nineteen had only $14.00. Got father to send me to the Sweeney School. Three days after I came home I fixed a neighbor's Ford Car. That was my start. Today this garage is worth $4,785.00. My business takes three men to handle. I never worked in any other garage. I used my Sweeney training. If you want to get that start, do as I did and go to the Sweeney School."

Look at Clayton Ede's nice garage at Alnsworth, La. Clayton says: "We operate the leading garage. Have all the business we can do. Also handle Hudson, Essex and Buick cars. Owe my present success to the wonderful training received at the Sweeney School." Then just to the right of Ede's garage is picture of B. A. Noller's business in far off Australasia.

What these boys have done YOU can do. If you like mechanics, write me today. Get my big free Catalog. There is a fortune for you in the pages of this book. Mail the coupon on opposite page or post card will do.

Learn Quickly at Home in Your Spare Time

Get into this fascinating profession which has a future as big as modern advertising and modern business. The Federal "Master Course" teaches you the methods and ideas that make your drawings worth real money. It gives you individual personal criticism on your lessons. No previous training or experience needed. And best of all—Leading successful artists are authors of exclusive lessons in the Federal Course. They will give you the benefit of their experience and advice, only in this Course.

Get This Free Book "YOUR FUTURE"

Investigate now—by all means send for this book. Beautifully illustrated in colors, it gives facts about the field of commercial art, names of the famous artists who are Federal Authors, and every detail you will want to know about the Course. It is a proven result-getter. If you are in earnest and 16 years or older, send 6c in stamps today for this book. Kindly state your age and occupation.

Don’t Envy Successful Salesmen—BE One!

Those fellows who are making anywhere from ten to thirty thousand dollars a year—who travel first class, stop at the best hotels, are in daily contact with prosperous business men—did you ever figure out what it is that enables them to sell with such success?

It can’t be size—or good looks!

Otherwise keen sales executives would specialize in furniture dealers and chorus men—whereas some of the best salesmen you ever knew measure less than five feet five and are so homely that you actually feel sorry for them.

It can’t be schooling—

Otherwise only college graduates would hold the records—and men like Schwab wouldn’t have a chance in the world.

It can’t be any special GIFT which they inherit—

For there’s many a salesman straight from the land where the tall corn grows—his father a farmer and his father’s father before him—who fairly astonishes the “buss” at the way he brings in the business.

If it isn’t any of THESE things—then it is surely possible for ANY man of average intelligence—provided he has the course to try and the willingness to LEARN—to become a successful salesman.

For the REASON for success in selling is nothing more nor less than the knowledge and application of SALESMANSHIP.

Get that knowledge and APPLY it—whether you are now in the selling field or not and you predict that your income will mount and will NEVER CEASE TO MOUNT—so long as your health is good and you stay in business!

How You Can Get the Training That Will Bring Success

A bold statement, you may think—but it is based on bed-rock facts.

When LaSalle Extension University was preparing its training in Modern Salesmanship, it made a careful study, over a period of years, of the selling processes of more than a thousand outstanding salesmen engaged in selling a wide variety of products and many different types of service. These men were chosen as exceptional. Their records proved it.

Under the direction of a nationally known sales executive—himself a $50,000 man—the particular methods which were found to yield the highest percentage of results were sifted out—and for two years, and at a time when selling was anything but “easy,” more than four hundred salesmen—comprising a number of separate sales crews—were instructed to specialize in these particular selling methods.

Out of this test came unusual and often surprising results. The best men on various forces—in lines ranging from boots and shoes and electrical apparatus to motor cars and life insurance policies—thus the basics furnished them MATERIALY INCREASED THEIR SALES.

One salesman stated what was furnished him was responsible for the establishment of more than 100 new accounts in his territory and a large increase with his old trade.

Increases of 100% and in some cases 500% were reported.

On the strength of these findings, the identical principles and methods used by these men and proven sound and practical by the severest kind of tests, were organized and incorporated into the present training offered by LaSalle in Modern Salesmanship.

And AGA they are proving out—as witnessed by the following statements, typical of hundreds that have been received by LaSalle within the last few months:

"The first two texts have given me so much that I am firmly convinced that if I never learn anything more from the course, I would have a full return for the entire investment. I tell you frankly that I would not take $25.00 for my scholarship if another could not be had."—C. J. JONES, Canada.

"From a salesman in the ranks, in two short months my sales have shot up nearly 150 per cent, and I have received a promotion from a company I had been with only six months. I am now a district manager of eleven men working under me. Not only have my immediate sales shown an increase—and right in the middle of the summer months—but I have had a keener grasp of the principles of selling. I know the meaning of fundamentals now: I know that by the application of certain definite truths, certain definite results can be attained. My effort, formerly more or less of an uncertainty, is now a certainty. Getting down to brass tacks, I know what I am doing now."

—C. RUTHERFORD, Ontario.

Send for “Modern Salesmanship”

To explain within the brief limits of a page how LaSalle training in Modern Salesmanship is conducted, or to give more than the barest hint of its value to the man ambitions to develop as a salesman, is impossible. We have therefore prepared a 66-page book entitled "Modern Salesmanship"—an interesting and compelling presentation of the present-day opportunities in salesmanship and a clear outline of the way they may be quickly realized.

No man engaged in selling—or looking forward to salesmanship as a career—should be without a copy of "Modern Salesmanship." The University will be glad to mail a copy to any man who marks and signs and mails the coupon just below this text. There is, of course, no obligation.

Learn to Make BIG MONEY As an Inventor

Amazing new home-study course now teaches you inventive science in your spare time; shows how to develop, patent, sell your ideas; how to make big money from inventions.

Famous Inventors Now Teach You!

Invention is not a matter of luck. Edison says, “Invention is science applied, and should be taught as a profession.” Suppose you went home tonight and found a window rattling a bit. Instinctively you would stop the rattle with a wedge. That instinct is the germ of your inventive ability, and you can develop it so strongly that in a remarkably short time you will think and act inventively. Every invention is based on exactly the same principles that you use to “fix” the rattling window—first to see a problem, and then to find some fact which solves that problem. And now, for the first time, 15 famous inventors teach you how to acquire these simple, easily learned principles of invention.

Learn How to Invent at Home

If you have ever had an idea for an invention, or if you would like to become a spare-time or professional inventor, see what this fascinating new course can do for you. Fifteen famous inventors now teach you at home the secrets of invention; show you how to get the information you want, how to perfect your ideas quickly, what to invent, and just as important, what not to invent. You also learn how to avoid the mistakes which cost many inventors thousands and thousands of dollars. This complete course teaches you everything you want to know—how to get a patent, how to protect your patent rights, how to dispose of your invention, get the greatest possible profits, and hundreds of other facts about invention worthy a fortune to you.

FREE BOOK On Inventive Science

A wonderful book explaining this fascinating course will be sent to you free. It explains the course in detail, and proves that you can easily train your mind to think inventively so you may become a successful inventor. It shows how this course gives you, in a short time, a wealth of information which other inventors learned only after years of hard work and bitter experiences. Get the advice of these fifteen famous inventors. Send for this book today. There is no cost or obligation. This bureau is not connected with patent attorneys or manufacturers. Our only work is to teach you how to develop your ideas so they will bring you big money.

BUREAU OF INVENTIVE SCIENCE

Dept. 310, Winzer Bldg., ROCHESTER, N. Y.

"Salary Increased $1080 a Year"

"I have not yet completed my course," a student wrote to us the other day, "but already my salary has been increased $90 a month. That's $1080 a year. Does spare-time study pay? I should say it does. I might still be plugging along in the same old job at the same old salary if I hadn't sent in that I. C. S. coupon."

Wouldn't you like to earn $90 more a month, or $1080 more a year? Wouldn't such an increase in salary make a tremendous difference in your life? Isn't it about time you stopped wishing for a better job and made a real, honest-to-goodness effort to get it?

If the I. C. S. can raise the salaries of other men, it can raise yours. If it can help other men to advance, it can help you, too.

At least find out how—by marking and mailing the same coupon that has brought success to so many other men just like yourself. It doesn't obligate you in any way to do this, yet it may be the means of changing your entire life. Make your start now.

Mail the Coupon To-day!

Robert, N. Y.
Are You To Blame?

No one should be blamed for being dumpy, grouchy, disheartened if he feels all off when he rises in the morning and feels languid and sluggish all day, but anyone should be blamed who permits such a condition of the body and mind to ruin his whole life and the lives of those about him without making an effort to throw off the monsters—disease and ill health—when I stand ready to help him in a way that no other man in the world can help him—when I offer to place within his grasp a system of self help, rehabilitation, upbuilding and strengthening, that is leading the way in making better men, happier men out of thousands who counted themselves failures.

You should be blamed if you refuse to listen to the advice of the man who first made of himself the most perfect specimen of manhood in the world and who now extends his hand to you and offers to point the way to health, strength, happiness and hopefulness.

MY HAND IS HELD OUT TO YOU IN FRIENDSHIP—I WANT TO HELP YOU

Strongfortism has lifted thousands of weak, ailing, discouraged men out of the bog of hopelessness and despair and placed them on the broad straight road to health, happiness and prosperity. Strongfortism has given them renewed vitality, ambition and power to Do Things.

STRONGFORTISM
Is A Science In Itself

Strongfortism is a long stride ahead of any so-called physical course or system that you know of. It embraces all the essentials of such systems, but is not limited to them—it goes far beyond, reaching out to a variety of Nature's aids, employing them to an advantage that brings surprising results to every Strongfort follower.

That is why I have been able to banish all drugs and medicines and clumsy devices of all sorts intended to relieve disease. I get results that are most astounding because my treatment is so easily followed. My search after the basic truths of Nature and the facts about the diseases affecting humanity has led me to discoveries that are proving of inestimable benefit to all to whom I have imparted them.

My Free Book Tells All About It

Send today for your copy of "Promotion and Conservation of Health, Strength and Mental Energy." It's free, but the information it contains will be of inestimable value to you. It will tell you how you can, without medicines or drugs, and without the use of expensive apparatus, build yourself up to perfect health—how you may become a strong, healthy man. It will point the way to social and business success and to a happy life. It will show how to attain complete enjoyment of all your faculties and the full realization of all the blessings and joys of living. In short, it will tell you how to REALLY LIVE, by devoting a few minutes every day, in the privacy of your own room, if you wish, to following my easy, simple instructions.

FILL OUT THE COUPON BELOW AND MAIL IT WITH a 10c piece, one dime, to cover packing and postage and you will receive your copy by return mail, with a personal letter from me concerning the subject or subjects in which you are most interested. Sending for this book will not obligate you in any way, but it will show you how to attain to a fuller, freer, gladder, more perfect life. Take the first step toward their attainment by mailing that coupon now.

The Only Difference Between Them Is a Set of Books

One earns $30 a week—the other $60. A year ago they were equal in skill, and both got the same pay. But one stood still, while the other was ambitious to get a bigger, better job. He read our "Carpentry and Contracting" and it told him a thousand things he never knew before—gave him ideas—better ways of doing things—enabled him to do jobs successfully—by so doing helped him to solve the problems that came up in his daily work. The big boss was quick to notice his progress. Today he has a better job and a man's size income. He is the boss himself.

With the big building boom sweeping across the country, there is a demand for more and better carpenters, plasterers, painters, masons, plumbers—every branch of the building trade is crying for good men at BIG WAGES. Now is the time for you to "cash in"—you can earn more if you learn more. Every man in the shop or on the job should have this set of

Carpentry and Contracting

Five big, wonderful volumes, bound in black flexible binding that will last a lifetime, 2138 pages of practical wisdom and more than 1,000 blue prints, plans, pictures and diagrams, prepared by 25 well-known experts.

Here are a few things this set of books will tell you:
- Estimating
- Blue Print Reading
- Concrete Work
- Drafting
- Use of Steel Square
- Stair Building
- Drainage
- Heating and Ventilating
- Plumbing

Why not spend a little of your spare time at home fitting yourself for a much better job and a fatter pay envelope? Read this FREE trial offer and easy payment plan.

American Technical Society
Dept. G-719
Chicago, Ill. A.

Please send me a set of Carpentry and Contracting, for seven days' FREE EXAMINATION, shipping charges collect. I will examine these books thoroughly, and if satisfied, will send $2.80 within seven days and $3 a month until I have paid the special price of $19.80. If I decide not to keep the books, I will return them within one week at your expense. It is understood that if I keep the books I am entitled to a FREE Consulting Membership in the Building division of the Society.

MEN WHO KNOW A TRADE. SKILLED MEN

What is the difference between trained men and untrained men today? Trained men are receiving from $8 to $15 per day, steady time. Untrained men are receiving from $2.50 to $5.00 per day and work wherever and whenever they can find employment.

One of our men recently qualified as an automotive engineer for a job paying from $3,600.00 to $5,000.00 per year, another for $1.00 per hour, steady time as an electrical expert and so it goes.

There are all kinds of big paying jobs for you as well as thousands of others, if you will but wake up to what is waiting for you. Will you answer the call or are you satisfied with an unskilled, small pay job. Office men all over the country are realizing the opportunities in the trades for them, are quitting their jobs and learning a trade.

Blame yourself if you do not take advantage of this opportunity. Write today, now, for our big, FREE catalogue, the most practical course of training at the lowest price. Everything complete, practical and made so simple that anyone can master it. Night business course, night Radio course, Y.M.C.A. membership. Life Scholarship privileges. All for the one low fee.

Guess This Man's Age!

Is it 30, 35 or 40? You would never guess right—he is 65 years of age! Sixty-five, yet young as any man of 25! He never has an "off" day, nor headache, back-ache, stomach ache. Yet he lives no "regulated" life; keeps what hours he pleases, eats and drinks what he likes. How?

By keeping his spine a half inch longer than it would ordinarily measure at his age!

Why a Person with a Full Length Spine is Rarely Sick!

How does this benefit? The spine is a series of small bones held apart by pads of cartilage. With years, the spine "settles," and the pads become so thin the bones come in on the nerves between. This abnormal pressure on the nerves plays havoc with health, brings on nervous disorders—nervous exhaustion. And nervous exhaustion means old age, regardless of your years. Keep the spine "elongated"—the vertebrae apart—the nerves free—and every part of your body will have a full supply of the nerve energy that is life—health—youth!

No Apparatus!!

Try SPINE-MOTION FREE!

See if your nervousness, your constipation, your stomach trouble, your "old age" isn't really in your spine. See if your nerves are not at a vice. Try SPINE-MOTION. Just five movements to it—that's all—but in five minutes you'll feel like a new person. Try the method for 5 days, 5 minutes each day. Remember, please—NO APPARATUS. Note the difference in your appetite, in your sleep—in your "pep," vigor and desires. Pay nothing unless you feel and see wonderful benefits. If you are more than satisfied and delighted with the results, remit only $3 in full payment for everything.

FREE Trial Coupon—Mail It Now!

Fiobart Bradstreet, Suite 1777
630 South Wabash Avenue, Chicago, Ill.

Send me your SPINE-MOTION. I will either return it in 6 days or send $3 in full payment.

GOODWEAR can use a few more GOOD MEN
Our men make $50 to $100 per week and up—depending on their ability and the time they give to our proposition. We can prove it.
Profits of $4.25 to $5.50 on every sale—collected and kept by salesmen when order is taken.
Two to four orders a day easy. More possible. Men have sold as high as 20 suits a day. Figure for yourself the profit possibilities of this line.
All-Wool fabrics, high-grade tailoring and an absolute guarantee of satisfaction insure repeat sales. Steady season after season income assured.
Real co-operation from our end: Selling helps and advertising material that get the business, make selling easier—business bigger—profits greater.
These are the simple facts about the GOODWEAR proposition. If they appeal to your reason let us hear from you promptly—but let us urge you to make it prompt.
A dwindling supply of linens makes it almost certain that these applicants will be disappointed before the season is over. Wherefore we are particularly desirous of having every honest, ambitious, aggressive salesman put his hands to the wheel and give the business all he has and when you write, tell us about yourself and your experience. It will help us to give you action. Address Dept. 638.

New Easy Way to Equip for the Biggest Electrical Jobs

S. V. Smith has been called "The Electrical Wizard". His title is well earned by his vast knowledge of this fascinating subject. He is perhaps even better known as the inventor of the amazing "Shop Practice Extension Method" of instruction. For this is the Easy New Form of study that has turned out such expert electricians that Mr. Smith has given them the very cream of the jobs offered to S. & H. Graduates. His personal instruction is now available to you. The services of the great S. & H. Employment department are at the disposal of every one of Mr. Smith's graduates FREE OF ALL COST.

Discovers New Way to Give Shop Practice in Your Own Home

It is now made possible for any one, regardless of education or experience, to be trained for big pay jobs. By an amazing new easy system discovered by Mr. Smith it is made possible to give actual shop practice to the student right in his own home. Everything is so clearly explained and so wonderfully illustrated with original cuts, pictures, diagrams, plans and designs—and Mr. Smith's own personal supervision is so thorough that you work out in practice every step of the course just as though you were at a resident school. It is the only system by which actual shop practice can be given the student in his home.

Every Branch of Electricity

No matter what you want to learn, you will find it in this wonderful course. You are taught all types of electrical work, such as house wiring, central and sub-station operating and maintenance, automobile and tractor starting, lighting and ignition, electrical jobs and battery service. You are taught motor maintenance, armature winding, illuminating engineering and line construction. Best of all you are fitted for jobs as supervisor, foreman, electrical technician and equipment manager—the big pay jobs at the top of your profession.

Men Needed

If you want to get out of the Low Pay rut, study Electricity. It is the most fascinating and best paying field in the world.

And when you enter this profession you cannot afford to be without the prestige and backing of the S. & H. Electrical Works.

Free Outfit

To all who send coupon at once Mr. Smith is now offering free a complete outfit of electrical apparatus, instruments and appliances for experimental and practical home shop work. 2060 South Wabash Avenue, CHICAGO, ILL.
He thought he could throw me—

Dear Tom: You know how Ted Brown has always been saying he could throw me with one hand behind him, if he wanted to. Well, yesterday, he grabbed hold of me and we had it out. Gee, I wish you'd been there. You know how much bigger Ted is than I. He thought he had me licked—dead easy—

but

I wriggled around and got a hold on him. I've learned from the Farmer Burns School of Wrestling. The next second—KEEFLOP!—and I had Mister Ted Brown on the ground, yelling for me to quit. It's a cheap to handle a fellow half as big as big as you are if you know the secret holds. If I were you I'd write to Burns School for their free book about wrestling. So long—FRED.

Learn Wrestling Secrets from Worlds Champions Farmer Burns and Frank Gotch

Learn the marvelous holds, breaks, blocks and tricks that will enable you to handle big, strong men with ease. The renowned Farmer Burns—father of scientific wrestling—and Frank Gotch the world's champion, have prepared a series of lessons in which they reveal the inside secrets of training that will make you, too, an expert wrestler. All the great secrets of self-defense and jujutsu illustrated by printed word and picture. The lessons teach you how to become a great athlete, and secret knowledge enabling you to throw boys and men larger and stronger than yourself.

Send for FREE Book

Our FREE ILLUSTRATED BOOK tells you all about the advantages in health, vigor and respect that being able to wrestle brings one. It tells you how to learn to become a skilled wrestler in your spare time. Brim full of interesting information about wrestling. Also lots of pictures. INVESTIGATE. Write today for this free book. No obligations. Tear out and mail coupon NOW!

Farmer Burns School
1777 Railway Exchange Bldg., Omaha, Neb.

I want you to work for me—

I want you to be my salesman and take orders for my fine made-to-measure suits. I don’t care if you’ve never sold before—I’ll take you and teach you. I’ll show you all about the work and make it so plain and simple you’ll be surprised when you see how easy it is, and you’ll wonder how I can afford to pay so much.

GET STARTED AT ONCE

Lost no time. If you want to be a Star Salesman, dress in finest style, earn big money at the nicest, easiest work you have ever done, fill out the coupon and mail it to me quick—right away.

Successful offer—High wages—High pressure—Act at once. A postal will do. H. R. VANT, INTERNATIONAL STUDIOS, Inc., Dept. 1197, 3601 Michigan Ave., Chicago, U. S. A.
These Books FREE For One Week

Send no money—just fill out the coupon. After you receive the full set of books, express collect, read them over and test them out for seven days. If you don't want them, send them back at our expense. If you decide they will do for you what they have done for more than 100,000 others, pay $2.80 within one week and $3 each month thereafter until the special price of $21.80 is paid. This amounts to only ten cents a day. Mail coupon NOW if you want a bigger, better job at higher wages.

All Automobile Engineering Facts at Your Fingers' Tips

Six Complete New Books for Study or Reference
Also Year's Consulting Membership in American Technical Society—FREE

Here's the most practical set of books ever written on automobile engineering. Each book is brimful of information about the various phases of this work. 2,600 pages, 2,300 pictures and diagrams, 125 blue prints on every subject. Practical problems are solved in everyday language. They make automobile engineering as plain as day. Completely cross indexed for ready reference.

Know All About Automobiles and Earn Big Pay

These are just the books for the man who wants to know all about automobiles and fit himself for a big-paying job. They are interesting from start to finish and crammed with information. A little regular reading in them during spare hours will soon equip you for the automobile business. Then after you get into the auto game, you'll still have them for reference.

Let These Books Solve Your Daily Problems

To the man now engaged as a mechanic or shop foreman, these books will give a world of help. They dig deep into the technical angles and theories and explain them in everyday words. If you have trouble on any point, you'll find the answer in these books. They are the work of fifteen auto experts who know from experience, the problems and difficulties of the shopman.

Repair Your Own Car

The car-owner will find these books extremely valuable as an aid in repairing his own car. Think of the heavy repair bills this will eliminate. Think of the money you can save.

FREE Consulting Membership

A resident consulting staff of 18 practical experts is waiting to solve for you any auto, tractor or motorcycle troubles that you may have. A letter or a wire to the American Technical Society will bring you an immediate answer and the solution to your problems. This advisory staff of practical automobile men plus your library of Automobile Engineering will enable you to handle successfully any auto job. These men know all the latest methods and the newest and best ways of doing things. Let this pay-raising consulting staff be YOUR SILENT PARTNER. Use this service daily if necessary. This free consulting membership offer is good for a limited time only and can be withdrawn without notice.

I Guarantee to place You in a Position

Serious Shortage
of Auto Mechanics

Positions Now Waiting—Special Terms
on Training—Free Railroad Fare
Allowed—Write Today

"I can train any man, young or old, who will apply himself, in a few weeks' time, to fill one of these steady positions at big pay now waiting right in his own community." This statement comes from Henry Rahe, President of the Rahe Auto and Tractor School, Kansas City, Mo. Few of us realize, according to Mr. Rahe, what a serious shortage of trained mechanics has been brought about by the rapid yearly increase of Automobiles, Trucks and Tractors.

To help overcome this condition, Mr. Rahe is offering not only special terms on a complete course of six to eight weeks' training at his big school in Kansas City, Mo., but will allow your railroad fare to Kansas City for training. This offer is all the more remarkable from the fact that during the past fifteen years Mr. Rahe has successfully trained more than 40,000 Auto and Tractor Mechanics. Right today you will find Rahe-Trained men are owners of garages or leading mechanics in practically every town and community from coast to coast.

If you want one of these steady jobs now waiting, write today to Henry J. Rahe, President of the Rahe Auto and Tractor School, Dept. 1755, Kansas City, Mo., for full particulars and Free Curfare Offer. You will also receive a copy of his students' paper, the Pictorial School News, showing the vast equipment used in training, and describing the many opportunities now existing in all branches of the Auto and Tractor business. No colored applications. Write today as this Special Offer is being made for a limited time only.

WADE HILL MFG. COMPANY
Dept. X40 ST. LOUIS, MO.
Choice of Two Famous Patterns—
3 Rugs Free—Year to Pay

We show above two of the most popular Congoleum patterns that have ever been produced. One dollar pinned to the coupon below brings you either pattern on approval. One 9 foot by 12 foot rug and three small rugs to match, each small rug 18x36 inches.

Pattern No. 534
This is the Oriental Gold Seal Congoleum Art Rug shown at the top of the page. On the floor, it looks unbelievably like an expensive pile fabric. The richest blue color dominates the ground work. Mellow crepe old ivories, and light tans, set off the blue field. Mingled with these lovely tints are peacock blue, robin's egg blue and darker tones. Old rose, tiny specks of lighter pink and dark mulberry are artistically placed. Darker browns and even blacks, subdued to faintness, lend dignity and richness.

The border background contrasts with the blue all over center by revering the color scheme. Erra red and tan shades form the border background. In this rug, you have all the advantages of design and coloring, of cheerful warmth and lovely color effects so much sought after in high grade pile fabrics. An ideal all purpose rug, beautiful in any room. Perfect for living room or bedroom. Luxurious in bathroom or dining room. Chevyra in the kitchen.

No. E4C534 9 ft. x 12 ft. Congoleum Gold Seal Rug with 3 small rugs to match, each 18 x 36 inches—all four only ........ $17.95

Tile Pattern No. 408
Probably no floor covering of any quality or kind, ever piled up the popularity of this wonderful design. It is a superb tile pattern that looks like mosaic. Lovely robin's egg blue, with shades of Dutch blue, and a background of soft stone gray, give a matchless effect. This design is particularly suited for the kitchen or dining room.

No. E4C408 9 ft. x 12 ft. Congoleum Gold Seal Rug with 3 small rugs to match, each 18 x 36 inches—all four only ........ $17.95

10000 Other Furniture Bargains

---

Brings All Four Rugs on a Months Free Trial

Ours is the only house in America that can make you such an offer. No one else can bring you a genuine guaranteed Gold Seal Congoleum Rug, in the full 9 ft. by 12 ft. size, with three small rugs as extras, and all for less than the regular price of the big rug alone.

And on a years credit.

Clip the coupon below. Write your name and address plainly. Say which pattern you want. Pin a dollar bill to it—mail at once.

We will ship immediately, on a months trial, all four Congoleum Rugs—in one complete neat package. No more, no bother, no trouble to lay.

If satisfactory, take a year to pay.

The Greatest of Bargains Pay Almost as You Please

Almost everybody knows the price of the famous Congoleum Gold Seal Rugs. They are advertised and sold at the same standard price everywhere. And bear in mind that you don't send us the full amount. Only one dollar now and the rest later—taking a year's time. Look everywhere else first if you wish—stores, catalogs, magazines and newspapers. You'll find no offer like ours.

If you return the rugs, they will be refunded and also all freight costs.

Three Rugs Free

For the heavy wear spots in front of sink, kitchen, at three meals, in the hall, in front of dresser or bed. While this offer lasts, we give three of these small rugs free with each large rug; all four for less than the price of one.

The Rug of Guaranteed Wear

Congoleum Gold Seal Art Rugs are the fastest selling floor covering known. They have quickly coming the national floor covering—glibly priced in good homes for any and all uses.

Waterproof. No Burlap for Water to Rot. Surface is hard, smooth and wear-resistant. Does not stain. Not marred or burlapped by cleaning liquids. They lay flat from the first moment without fastening. They never curl up or kick up at edges or corners. No need to tack or fasten them down. Dirt cannot accumulate underneath.

Easy work. Rid you of back-breaking drudgery. Dirt, ashes, grit, dust or mud cannot "grind in." Congoleum Gold Seal Art Rugs. A damp mop or mop keeps it clean and polishing to a sheen. No laborious beating, no sending to cleaners.

Absolutely sanitary. All this guaranteed by the famous Gold Seal that means complete satisfaction or your money back.

Very Important

We do not offer our bargains or send our free catalog into bigger cities. If you live in a city of 100,000 population or over, we cannot fill your order for this Congoleum Rug Offer or send our free catalog.

To everyone else we bring all the advantages of our house freely.

You Can

Follow in the lead of Bradley, shown on the opposite page, and scores like him who have taken advantage of the amazing money-making possibilities in the automobile, truck and tractor business. Here is a chart of facts—authentic figures which point out the opportunities. If you are ambitious and seek a money-making opening, here's your chance—a chance to cash in to a degree that will satisfy your highest aims.

Thousands of competent garages, battery shops, auto electrical shops, tire and welding shops are needed now. Trained men can run them.

Learn Autos, Trucks and Tractors in the Heart of the Industry

Without any previous experience—just a liking for mechanics—you can learn the auto business from A to Z in a few weeks at the Michigan State Automobile School—the factory endorsed school in Detroit—the heart of the industry. Then step out, equipped with knowledge and training, to a future of certain, big money making. You have distinctive advantages, learning the business here. It's the fountain head of the automotive industry. You are taught under factory endorsed methods. You learn both theory and practice on latest equipment. You visit the great auto factories—learn their methods first hand—and it all means greater opportunities and more certain success.

Learn in a Few Weeks—Start Now

A thorough training in Detroit, at the M. S. A. S., is the thing that fattens the pay envelope if you are working for others, or puts more profit in business for yourself. You can take a full Automotive Course, or specialize in any one of its money-making branches; you can be an Auto Electrician; a Tire Expert; a Battery Service Man; a Repair-Man; a Welder; a Machinist; or specialize in motorized farming, with truck, tractor and farm electric-lighting and farm engine training. Classes are always open. You need make no special arrangements—you can start at once—now—and that's the thing to do.

Life Scholarship

Your enrollment entitles you to a life membership, with privilege of service any time you want it. Many students come back to brush up on latest automotive ideas and new equipment. It doesn't cost a penny extra.

The position of the M. S. A. S. (The Detroit Auto School) in the heart of this industry, insures most thorough, most practical, systematic training, at a cost so low and terms so easy that any man, anywhere, can afford it.

MICHIGAN STATE AUTOMOBILE SCHOOL

310 Auto Bldg.

DETOIT, MICHIGAN

The Factory Endorsed School
Here is Bradley—merely one of thousands of M. S. A. S. students who have achieved success far beyond their fondest hopes. What these men have done you can do. The opportunities are now greater than ever. There are more autos—more trucks—more tractors and every year adds to the money-making possibilities. You have ambition—you want success. Success is certain if you are willing to work for it. You can have independence—be your own boss—stop the plodding and get into work you like. You can earn big money, be prosperous, happy and independent. Bradley is no exception, we have graduates who have made as high as $10,000 in less than a year. These records may seem amazing, but they are true. It is all done through head and hand training at the M. S. A. S. Decide now to give yourself the training that will pay you big and establish you in a successful life work.

From $1200 a Week to $500 a Month

Read Bradley’s letter below. It’s his own story of the success he gives to M. S. A. S. for his success. The success you can enjoy, too, if you accept this opportunity.

H. S. BRADLEY
BRADLEY GARAGE
CLEVELAND, OHI0
Distributor, Vesta Storage Batteries
ALEMITE LUBRICATOR SERVICE
Automobile Repairing

Michigan State Auto School, Detroit, Mich.

Gentlemen: I wish to state that before going to your School I was employed as a shipping clerk with a well-known concern at the enormous salary of $12 per week. Incidentally, this included overtime. I knew absolutely nothing about an automobile. I couldn’t drive one and didn’t know the difference between a carburetor and a wheel-base. In fact, I didn’t know they had a wheel-base. After leaving the School I worked as a service man for the Oakland Motor Company of Pontiac, Michigan. I later obtained a position as detail salesman for the Studebaker Company in Detroit and was later connected with such firms as the Northwestern Motor and Manufacturing Company, and the Continental Motor Manufacturing Company. I have since been service manager for two large concerns—one in Detroit and one in Cleveland. The salary covered all the time—the last position paying me $300 per month.

I then decided to go into business for myself, which business I have successfully built and maintained up to the present time and expect to maintain for a long time to come. I estimate the present earnings of my business at $100 per month clear and growing all the time. I believe that the M. S. A. S. is by far the best School of its kind in the country. For the man who will apply himself to the work and to the study, I can safely say that the Michigan State Auto School is the best place to learn the automobile business.

Mail Coupon to Day

Michigan State Automobile School

In 8 weeks we graduate you a first class AUTOMOBILE MECHANIC, and help you get your first job. One of our recent pupils makes $350 to $400 monthly. Another made $5,000 in 4½ months after graduating. WRITE FOR BIG ILLUSTRATED CATALOG.
Drawing Table — FREE!

I am giving this practical folding Chief’s Own drawing table to each of my students positively without cost. I am making this offer to get men everywhere interested in the great future which a draftsman has. More draftsmen are in demand today—right now—than ever before. It has been estimated that there are 6,000 calls for draftsmen every month. So, I want students to enroll early. As I train all students personally in the practical work of the drafting room, I cannot, will not and do not take everybody. I select my students.

Send the free coupon below and find out how and why I give this drafting table without cost to my students.

Drawing Outfit — FREE

Here is a regular drawing outfit for the draftsman and designer which I am presenting to each of my students who enrolls before this offer is withdrawn. In this outfit is every instrument necessary to the skilled draftsman. All of the drawing instruments are nickel-plated and the rules and all other materials are of the finest quality. I am making this offer because all men who want to become draftsmen, working under fine, clean conditions, and with opportunities for fast advancement, should enroll at this time. They should not wait.

Pocket Rule FREE!

To everyone who writes now for the offers which I am making, I will send this Iverine pocket rule free. All you need tell me is that you are more than 16 years old and that you are interested in becoming a draftsman. I want you to have this constant reminder of the great future which will be in store for you if you become a draftsman.

$90 Drafting Course FREE

In addition to all of my other offers, I have also made arrangements whereby you may get a regular $90 Drafting course entirely free. I have determined to do all I can in preparing draftsmen for the thousands of calls which are being made for them by offering every inducement possible to ambitious men anxious to succeed in a big way.

Salaries Up To $250 and $300 a Month

I guarantee to train you in my personal, practical work until you are placed in a position earning $250 to $300 a month. This is a positive, actual guarantee.

Get My Book of FREE Offers

Send coupon at once for my book, “Successful Draftsmanship.” I will send it prepaid. I will also send you a list of the free offers which I am making to my drafting students now. Send this coupon, postcard or letter, at once.

Chief Draftsman Engineer’s Equipment Co.
1951 Lawrence Ave. Div. 93-57 Chicago, Ill.

Without any obligation, whatever, please mail your book, “Successful Draftsmanship”, and full particulars of your liberal “Personal Instruction” offer to few students.

Amazing and Supreme Life and Health Absolutely FREE

The Newest, Surest and Easiest Way to Regeneration and Supremacy

A Novel, Original, Unique, Startling, Sensational and Marvelous Method of Regeneration

A Revolutionary, Natural, and Ultimate Law that Requires No Change in Your Habits, Morals, Religion, Faith, Ways, Attitudes or Beliefs. Requires No Charms, Images, Symbols, Phrases, or Action of Any Kind

By JUNGERY RUSS

This extraordinary and Universal Law does not require you to buy anything, or to actively do anything or give up anything. It requires no exercise, nor time, nor conscious deep breathing—no stretching, dieting, drugs nor medicines.

This natural and supreme Law—must not be confounded with hypnotism, auto-suggestion, psychology, spiritual science, psychic science, mental science, nor with electricity, osteopathy or any other method—mental or physical—ever devised in the past.

No self-hypnotizing phrases or formulas to repeat—no yielding, no recession, no giving up of anything, nothing to study, nothing to actively practice, no lessons to read, no books to buy, nothing to memorize, no self-deception—nothing but truth—reality—Natural Law.

A Marvelous, Mystifying Power of Nature Absolutely Free

Perfect health cures every known and conceivable disease. This Natural Law is guaranteed to give perfect health.

Death Eliminates the "Unfit" to Live

Thousands of human beings die of various so-called diseases, but, all of these die of but one disease—unfitness to live.

Regardless of What Be Your Ailment, It Is But the Effect of Unfitness to Live—Deficient Power of Life and Health

There are twenty-five thousand quadrillions of units—living beings—in each human body. This Amazing Natural Law, when used, makes every one of these units more highly alive, more vital, more powerful, more efficient and thus more able to render the highest type of service unto self, as well as unto the entire organism. Each human being is only as alive as these units are alive, no more—no less.

This Marvelous Natural Law is pleasant and agreeable. Through it, you positively put yourself in harmony with the forces of Life and thus, you cause them to cure for you, heal for you, work for you, function for you and manifest power and supremacy for you. It makes the Creative Principle of life your servant and you the Master of your health, life, conditions and destiny.

Through this startling Natural Law anyone can rid self permanently, of nervousness, weakness, congestion, indigestion, rheumatism, constipation, tuberculosis, catarrh, nervous exhaustion and every weakness of male and female.

This unique Natural Law gives immunity from every disease of the inferior life—colds, tuberculosis, pneumonia, nervous prostration, auto-intoxication, biliousness, sour stomach, acidity, asthma, malnutrition, anemia, sleeplessness, morbidness and impotency.

This sensational Natural Law produces new and superior arteries, new and superior veins, new and superior heart, new and superior lungs, new and superior glands, new and superior organs, new and superior cells, and a new and superior organism and powers of every kind.

This revolutionary Natural Law contains no disadvantages—it has no drawbacks. Remember it requires no time, no exercise, no dieting, no drugging, no believing, no changing—nothing but advantages and gratification through and through. It supercizes health and life—the results are immediate—anyone can use it.

I prophesy that this mysterious Natural Law will drive every disease weakness and delusion entirely from the human race.

I am positive it is destined to banish weakness
and delusion from the human race by making supreme health and supreme reality inevitable.

Through this rejuvenating Natural Law any one may have the health and vitality of a lion or a tiger, without the inconvenience of being a wild animal, compelled to live in a wild state of Nature, with all of the inconveniences of the natural law that keeps a lion and a tiger vital and well is now yours, free, to use.

Tigers and lions living in a wild state of Nature do not look out for their health—this Natural Law looks out for their health. They do not run from one doctor to another or take pills and powders and try out remedies. They put the responsibility for their health on this Natural Law—you may do the same through this unique Natural Law.

It is no longer necessary for anyone to spend money for treatments and doctors and drugs and dieting and books and systems and lessons and cures and pills and devices, because perfect and supreme health and vitality are absolute free through this health-producing Natural Law.

Why be weak, why be ill, why be fat, why be thin, when you may, absolutely free, become in every way, perfect and supreme through this sensational Natural Law.

This startling Natural Law yields amazing nerve force, amazing energy, amazing vitality and extraordinary power of every character of mind and body—a new and superior life.

Through this wonderful Natural Law you may have all of the benefits of exercise, without exercise or its disadvantages; all of the benefits of conscious deep breathing with none of the disadvantages; the full and complete benefit of every vitamine and organic iron without drugs or dieting; all of the benefits of medicine and drugs with none of the disadvantages of medicine and drugs; all of the benefits of auto-suggestion, hypnotism and psychology, without the disadvantages of auto-suggestion, hypnotism and psychology; all of the benefits of dieting and every other kind of treatment, device or substance, with none of the disadvantages.

This marvelous Natural Law will banish high blood pressure, hardening of the arteries, "old age," nerve-exhaustion and tuberculosis from the human race.

Perfect health prevents all disease of an infectious and contagious character—all of the diseases that thrive in inferior organisms. Every disease fails when it attacks an organism fully fortified by this vitality-producing Natural Law.

This creative Natural Law can energize, vitalize and vivify every one of the twenty-five thousand quadrillions of living beings or units in your body, as to make ill health absolutely impossible, and, at the same time, giving you a new meaning for life, health, power and gratification.

There exists in every living being or thing, a creative, curative, healing, thinking, knowing and acting Force. This force acts only in terms of reactions. This dominant Natural Law arouses within it, the highest type of reactions—all of this without waste of time or any active effort or exercise of any character.

This demonstrable Natural Law energizes, vitalizes and enlivens every one of the living units in the human body. Through this Law you actually harness the creative and living force of the creative force of life. You attain results accordingly as you demand.

It has been discovered that every quality and power and good and function of mind and body arises out of, and derives from, one source. The Law through which this "source" is harnessed and capitalized without effort has also been discovered.

This secret is offered to you absolutely free. There are no "conditions" or "strings" attached to this offer.

This astonishing Natural Law is most marvelous, most simple, most subtle, and most powerful. It is the Law of creative power.

Remember there is nothing to buy, nothing active to do, nothing to study, nothing to believe, no time to waste, no habits to give up, nothing to lose—there is no mystery—it is merely a Natural Law.

If you are not enjoying life to the full—if you are in any way handicapped—if you are not in possession of all the powers of mind and body in the highest degree, you owe it to yourself to at once procure for yourself, free of charge, this surprising Natural Law.

Remember that demonstration and results are immediate. If you wish to feel newly alive, newly vital, newly ambitious, newly and supremely well, send your name today.

This powerful Natural Law creates perfect health just as heat converts rigid ice into yielding water.

It is a perfectly natural phenomenon—demonstrably true, yet so marvelously simple, as to be almost unbelievable.

It transforms the gloom of disease into the bloom of health, as the rays of the spring sun transform the dead soil into a new and luxuriant vegetation. It is destined to revolutionize human health and happiness—Humanity.

Any one—male or female—above fifteen years of age is eligible to receive this marvelous secret, absolutely free.

SPECIAL NOTE: When you receive this supreme Natural Law, it will be the principle itself—not merely information about it or how to ultimately get it—you will possess it—there is nothing for you to buy. Are you fit or unfit to live? Test yourself by this Natural Law of Supreme Life and Health. Swoboda has priceless secrets for every human being who wishes to be happier, healthier, more vital and successful in a new degree.

What Do You Call an Opportunity?

In my lifetime I have heard many men speak of opportunity. I have read some very fine definitions of this wonder-word. It has been the subject of many splendid speeches; authors have written abundantly about it in prose and poetry.

You have said, "I wish I had an opportunity."

But I am wondering what you call an opportunity.

Do you—as so many do—mistakenly associate it with "good fortune" or "good luck"?

Suppose tomorrow you heard of a $10,000 position seeking a man. Could you fill it? If so, it would be an opportunity. If not, it would be no opportunity at all so far as you are concerned. It would be merely a bit of information from which you could not benefit.

Opportunity, I believe, is usually a recognition of worth.

The biggest opportunity that can ever come to you will never be any bigger than your preparation—your worth-whileness.

If you are not worth considering, Opportunity won't give you a thought.

The biggest job of all the big jobs open and filled in the last twenty-four hours would have been an opportunity for you—

—if you had been prepared.

And I am not one who believes that Opportunity knocks but once.

The hundreds of opportunities which are here today will come again tomorrow—

—if you are prepared.

But you can be sure they will never be found on the door-steps of worthless prospects—men who are not ready.

Opportunity seeks and finds only those who have paid the price of preparation. She does not pick men as you pick a number from a lottery; neither does she cover up what she has to offer. Her gifts are an open book—yours from which to choose.

Pick the thing you want, and get ready for it. Opportunities do not come except as you attract them. LaSalle training offers a sure way to increase your powers of attraction.

Just bear in mind that the biggest opportunity that can ever come to you will never be greater than your preparation.

President LaSalle Extension University of Chicago, Illinois

LaSalle Extension University
The Largest Business Training Institution in the World

LA SALLE EXTENSION UNIVERSITY

Please send me catalog and full information regarding the course and service I have marked with an X below. Also a copy of your booklet, "Ten Years' Promotion in One," all without obligation to me.

- Business Management: Training for official, managerial, sales and executive positions.
- Modern Salesmanship: Training for sales and advertising executives, salesmen, manufacturers' agents and all those engaged in retail, wholesale or specialty selling.
- Higher Accountancy: Training for positions as auditor, comptroller, certified public accountant, cost accountant, etc.
- Traffic Management—Foreign and Domestic: Training for positions as railroad or industrial traffic manager, etc.
- Law: Training for Bar; LL. B. Degree.
- Railway Station Management: Training for railway auditors, comptrollers, accountants, clerks, station agents, members of railway and public utilities commissions, etc.
- Industrial Management Efficiency: For executives, managers, office and shop employees and those desiring practical training in industrial management principles and practice.
- Modern Business Correspondence and Practice: Training for sales and collection correspondents; sales promotion managers; credit and office managers; correspondence supervisors, secretaries, etc.
- Banking and Finance.
- Modern Foremanship and Production Methods: Training in the direction and handling of industrial forces—for executives, managers, superintendents, contractors, foremen, sub-foremen, etc.
- Personnel and Employment Management: Training for employers, employment managers, executives, industrial engineers.
- C.P.A. Coaching for Advanced Accountants.
- Commercial Law.
- Expert Bookkeeping.
- Business English.
- Commercial Spanish.
- Effective Speaking.

BIG JOBS OPEN FOR AMBU MEN

78% of all auto troubles occur in the electrical system—battery, wiring, etc. And the one man who can repair it is the automobile mechanic. Ambu men will fiddle around for 10 hours without discovering a trouble which an Ambu man will locate and repair in 15 minutes. No wonder Automotive Electrical Experts are in such high demand and the pay is so large.

Makes 4 Times His Former Salary

"I was making 50 cents an hour at the local garage. Then I heard about the Ambu course. After 4 weeks of training I was making $1.25 an hour. I had to make a $10.00 charge before I made $10.00 a week. It's easy to make big money at engineering schools."

J. J. Hoddell, Elyria, Ohio

$1,000 a Month

"I trained with a couple of friends 3 weeks. We have a very good job. We work for a large garage. We make $100.00 a month. Our job is to locate the trouble and then we have to make a $10.00 charge."

M. J. Ellard, Can.

Come to Chicago or Stay At Home

For those who cannot come to Chicago I have prepared a home study course. Makes you a graduate as a resident course at Chicago. So easy a child can master. Learn in spare hours. Positively fascinating. Personal coaching given by mail. Easiest way to make big money. Make big money in electrical repairs. Find it easy to get any price. See facts and figures in my free book.

FREE BOOK Explains all about this new field. Shovels where there is a big demand for Automotive Electricians and why the pay is so high. Tells what our graduates are doing and republics copies of their own grateful letters. Shows how you can get paid $200 to $400 a month. Big difference between efficient men and others perform the labor, and handle the dirt and grease. Get this remarkable book at once.

C. J. Buckwalter, Pres., Ambu Engineering Institute,
Dept. 110, 2632 Prairie Ave., Chicago, Illinois

50 days - then $132 a week

In New Automotive Electrical Business

The shortest road to big earnings ever known. Scarcity of experts makes positions certain and pay high. A remarkable new system of training enables you to earn $132 a week in less than two months. And we can prove it. Get my free book.

THINK of it! Only 50 days training puts you in a position to earn $132.00 a week! All because there is an enormous demand for Automotive Electrical Experts and there are far from enough. Emol-i-yers are ready to snap up our graduates at once. Our free employment service helps you to get the very "pick" of such positions. See facts and figures in my free book.

Experience Not Necessary

You don't need to know about Automobiles or Electricity at the start. Nor do you need any more education than the ability to read simple English. We give you all the knowledge you need—teach you completely—in 50 days. My book explains everything free.

Amazing New Way to Train

When the government needed Auto-Electrical Experts for the war there was no time to waste. Men had to be trained 100% right and sent out almost overnight. The man who invented the 50 day method was the man to whom Uncle Sam went for help. Results were amazing. Never before had such a thing been accomplished by anyone. A complete practical thorough training in 50 days. So remarkable that after the war and at a great cost it was made available to Ambu students only. Ambu has even improved on the original plan by not admitting more than 20 men to a class. No other school does this and the smaller the class the more you learn.

Get Out of the Grease

All my graduates are masters of their profession. And they are so enthusiastic over the way in which they've stepped from their former poor-pay jobs into this delightful, high-pay profession that I am glad to have you write them. I'll give you their names. They will tell you how fine it is to get out of the grease into a big money.

Unusual Short Time Offer

I have a most remarkable offer to make for a short time to those who send for my free book at once. It will be a revelation to you. So be sure to mail the coupon at once, while this offer is in force. Write me personally.

Horses Increasing in Numbers Despite Automobiles

With more than 13,000,000 automobiles now in use throughout the country, a recent census has shown that the horse, instead of becoming a museum curiosity, has increased greatly in numbers.

Better horses, and more of them, it is reported, are being bred now than at any time during the past quarter of a century, a gain in numbers of 2,750,000 being shown in the 25 years since motorized vehicles began to appear.

While more horses than ever before are being used on farms, they are gradually disappearing from city streets, many municipalities having laws forbidding their use on certain thoroughfares and in congested districts, in order to expedite the flow of traffic.

With the change, new problems in city planning have arisen. As the speed of transportation increases, square street corners are being changed to long, sweeping curves. It has been found by experience that the short turns slow up, while the long ones hasten traffic. Fronts of buildings also have been cut away, the sidewalks being placed under the overhanging second stories to permit the widening of the streets.

Another problem has been the growing number of accidents. Approximately 14,000 persons were killed by motor cars last year, it is estimated. Based on figures, furnished by surveys of 60 cities with populations numbering 25,000 and over, during the past eight years, the following table has been prepared:

<table>
<thead>
<tr>
<th>Year</th>
<th>Deaths per 10,000 Cars</th>
<th>Total Deaths</th>
</tr>
</thead>
<tbody>
<tr>
<td>1915</td>
<td>24.0</td>
<td>5,800</td>
</tr>
<tr>
<td>1916</td>
<td>20.8</td>
<td>7,300</td>
</tr>
<tr>
<td>1917</td>
<td>18.2</td>
<td>9,000</td>

</tr>
</tbody>
</table>

To meet these conditions, double-decked streets have been proposed in New York and Chicago. Subways and great underground parking spaces also are seen as a means to relieve the crowding. One-way streets already are in use in many cities with good results.
In a letter to Popular Mechanics Magazine, D. J. O'Brien, chief of police of San Francisco, says that the traffic problem must be met by opening up other avenues, as he declares, "we have reached a stage in our city life where it appears that regulations, from a police standpoint, are no longer effective to cope with the increasing automobile traffic."

California leads all other states in the number of its automobiles per capita, having a car to every 4.9 inhabitants. After pointing to this fact, Chief O'Brien suggests the following relief measures: One-way streets; subways under principal thoroughfares; changing streets paved with cobblestones to bituminous surfaces; reduction of the width of sidewalks to allow more space for vehicular traffic; establishment of new roadways, and the building of underground parking spaces beneath skyscrapers and in public parks and squares.

Similar plans have been advocated by other traffic experts and some of them already have been put into effect in several of the larger cities throughout the country.

Horse-Drawn Cabs Filling Thoroughfare in New York City in 1900 Before They were Crowded Off the Streets by the Growing Popularity of the Automobile

PECULIAR, MISSOURI, GOT ITS NAME IN PECULIAR FASHION

Connected with the naming of Peculiar, Mo., is a queer story. This small town decided that it had reached a stage where it was entitled to a place in the post-office directory, and its citizens suggested several names, all of which were rejected by postal authorities, as they had already been taken by other cities in the state. One official wrote "that it was very peculiar they could not find a name for their town." He received this reply: "Acting on your suggestion, we select the name of Peculiar." Thus, Peculiar was given its place in the postal guide book. Although the government does not name towns, it prohibits duplication within the borders of any one state. The same name, however, may occur in several states. For instance, there are 45 proper nouns used more than 20 times to designate cities and towns in the United States. There are 2 Chicanos, 6 Philadelphias, 7 Detros, and 14 Denveras. In Pennsylvania, 13 communities begin with Green.

Typewriter keyboards arranged like that of the linotype machines have appeared on the market, to enable apprentices on slug-casting machines to finger the "board" more easily. This displaces the old-fashioned method of practicing on a paper chart. Publishers of small papers, who set their own type, can use this typewriter with greater ease on account of the duplicate keyboard.
BEES NOT SO BUSY DESPITE POEMS OF ENDLESS TOIL

Is the "busy bee" not so efficient as it is believed to be? Experiments by government experts now indicate that stories of the ceaseless toil of the honey gatherers have been due more to the number of bees than to individual effort. By means of a very delicate apparatus and quick-drying paints of many colors, they made a check of the insects' activities and found that each worker makes on the average of five or six trips a day to the fields. The length of these depends upon the plenteousness of pollen and nectar, ranging upward from 15 minutes. After a bee deposits his load, he enters his cell and remains at rest for a half an hour or so, before taking to the wing again. His actual work is performed in about a half day, while the remainder of the 24 hours is his rest period. While apparently disproving the accepted idea of the insects' capacities for work, the investigators also learned that the harder bees labor, the shorter their lives. Some, who seemed more industrious than others, died within three weeks, while those who moved slower lived as long as five months.

AUG. 4, 1923

USES TRACTOR EXHAUST GAS TO KILL RODENT PESTS

Poisonous gases passing out of the exhaust of a tractor engine are used by a Wisconsin farmer to kill gophers, wood-chucks, and other burrowing pests. A hose, attached to a piece of pipe, is inserted into one of the holes leading to the animal's home, after the other entrances have been plugged up with earth. The pipe is screwed to the exhaust outlet, and the engine started. The deadly fumes filling the underground chamber, smother the rodents in a short time.

Fighting Fire from Folding Ladder that Can Be Opened in a Few Seconds: Left, Ladder Collapsed Into Pole

ARMED at the ends with steel ferrules, a fire ladder that folds up to resemble a pole, can be used as a battering ram. Built of strong, light wood, and occupying no more space than the ordinary pike, it may be easily carried through small windows and narrow passageways by one man. Only a few seconds are required to open or close it, an automatic lock preventing its collapse while in use.

SILKY TISSUE, CLEAR AS GLASS, IS PROOF AGAINST ACID

By a secret process, a product as flexible as silk and as transparent as glass has been developed. This discovery, coming after years of experimentation, is said to open a new field in the paper industry. Manufactured in various thicknesses, it can be wound in rolls so consumers can cut it into desired lengths. Acid, alkali, or oxidizing agents of ordinary concentration do not affect it, and it burns less readily than other paper.
Railroad Station from Abandoned Town Being Transported to New Location, Where It Will Remain until Another Shift of Population may Cause It to be Moved Again.

In a sparsely settled section of the country, where populations of small towns find it necessary to change locations from time to time, because of various conditions, a railroad has adopted the novel plan of moving its stations. Instead of putting up others, where towns spring up almost overnight, they load stations of some deserted villages onto flat cars and transport them to the new communities.

LID HOLDER PROTECTS HANDS FROM SCALDING STEAM

To protect the housewife's hands from scalding or burning, a kettle lid holder has been invented. Slots riveted to the upper rim of the kettle hold the lid firmly in place when the utensil is tilted to drain hot water from vegetables or meat, thus preventing the escape of burning steam. The cover slides easily in and out of the holder and permits more freedom of manipulation without possible injury than the old-style pot.

BELLS OF CHIMES ARE TUNED BY CUTTING IN A LATHE

By turning bells in a lathe, their proper tone can be restored. To lower the tone, the bell tuner reams it out from the point at which the swell begins, nearly down to the rim, frequently testing it with a tuning fork. The moment the proper pitch is produced he stops his work. In raising the tone, he shaves off the lower side, shortening the bell, for of two of equal diameter and thickness, the shorter will give the higher note. A notable instance of bell tuning occurred at Lausanne, where twelve bells, in three neighboring church steeple, had only seven notes, and caused a curious discord.

KEYLESS TOOL BOX FOR AUTO HAS COMBINATION LOCK

As a safe repository for automobile tools, a keyless box that is opened by a simple combination lock has been marketed. It is intended for use by owners who keep their cars in public places. The receptacle, made of heavy material, is large enough to hold a complete repair kit, yet is so compact that it may be placed out of the way under the cushions or in the running-board container. There is no key to be lost or misplaced.

Copyright from material.
EARTH'S AGE IS "SET" AT TWO OR THREE BILLION YEARS

After long investigation, scientists have announced that the earth has been in about its present state for two or three billion years. Geological measurements previously made were all lost in a maze of time before they had traced the history of the planet beyond 100,000,000 years. The present discovery rests on the rate by which radioactive substances change form. These materials are not permanent, but in time turn into lead.

POCKET CUP FOLDS IN TUBE SIZE OF FOUNTAIN PEN

Sanitary, compact, and easily carried, a patented drinking cup made of waterproof fabric on a thin wire frame folds into a tube the size of a fountain pen. It is specially designed for travelers and persons who live in states where individual cups are required. Placed in the pocket, and secured by a clip on the top of the tube, it takes no more space than a pencil. The two-piece container keeps the cup clean.

INDIAN GEMS LIKE JEWELRY FADS OF PRESENT DAY

Relics of the early American aborigines, resembling the "novelty jewelry" of today, have been found in excavations now in Progress at Burton Mound, Santa Barbara, California. Among the adornments unearthed are hairpins of bone tipped with asphaltum and studded with tiny crystals; gems of abalone shell; pendants and similar decorations, said to be unlike anything ever before found on the continent. The tribes that made them are thought to have been highly skilled in the art of carving ornaments.
JEWELS OF ROMANCE IN FAR JAPAN

Report No. 170 from Popular Mechanics Magazine's
Japanese Correspondent,
N. SAKATA OF TOKYO

I herewith wish to explain something of the cultured pearl which is only made in this country, except few other places in the world. There may be some who does not know name of the Mr. Mikimoto, a noted maker of the cultivated pearl in this country, but there must not be such persons in your and especially in European land. In England and France, you cannot pick out of people a man who does not know name of Mikimoto. To such a extent, name of him is known. Mr. Mikimoto, when I met him yesterday in his shop at Ginza, Tokyo, told the following story.

He once was a owner of the small tea-house near the beach of Yise-Bay where is numbers of pearls are being cultivated. That was about 30 or 40 years ago. From such time a youth who became a noted business man in the world, was trying to find out a field where he could find his true success.

The said Yise-Bay has very beautiful range of scene and inasmuch as that bay is sarounded by three land, with only one outlet to the outer ocean, consequently there is not comparatively wild waves. Calm sea with beautiful landscape attracts very many city people for their trip or one day pleasure. One day a gentleman who has returned from the foreign country after deep investigations of the culturing of the pearl, came there and stopped his pleasure at Mr. Mikimoto's small tea-house. That is the first chance on which Mr. Mikimoto and the gentleman made a touch. Since that time, both of them became intimate for friendship, though one of them is a noted gentleman and other is a mere owner of the poor tea-house.

From that time, that gentleman paid major part of his life in investigation of the pearl cultivating and stepped to such a extent that more one year or half investigation would be enough for producing the perfect true circle pearls. At this time Mr. Mikimoto was a best assistant for the gentleman. He closed his poor tea-house and aided the gentleman as if he was a hand or leg of the gentleman. Mr. Mikimoto had no other intention except he wished the gentleman could make out true circle pearls. About two months after, the gentleman got ill, though it

Oyster Basket or Cage

Inserting Glass into the Oysters
was very slight one, and put him on the bed, from which he directed Mr. Mikimoto.

The ill which considered to be slight one became very serious and after only one month sick, he went to the heaven, leaving very precious material, in Mr. Mikimoto’s hand, which would be changed into enormous amount of wealth. Consequently Mr. Mikimoto had to continue the left enterprise of pearl cultivating. Since he worked and worked, from dawn to fall, in investigations and labour.

Sometime he immersed in the water for several hours in handling the pearl oyster. His story continues to the interesting part, while my keen interest grow. He presented me a coffee and I accepted it with thanks.

He continued. It is by no means easy task, working in the water in coldest season in the year though he had set such a thing as cold, or poverty at nought. Yet he sometime determined to give up the enterprise, but he could never give up the job if he thought of the died gentleman to whom he debited very much.

After three or four years after the gentleman died, he first picked up the basket from the water. That was the first time on which he picked up the basket in which many oysters were put. In the oyster a glass ball was put on which oyster will cover with it’s flesh. If oyster cover the glass ball in true circle, that is success. But when Mr. Mikimoto picked out them, he found that his efforts was in vain. Such effort which spent in vain continued several times. He after ten days deleverages, he thought it would be better shut up his enterprise and commence again his poor teahouse. And he stepped to ending the enterprise.

One day when he picked up, expecting again fault work, the basket, he found that his effort was not in vain. He wondered whether it was true or a mere dream. But it was not dream but a real success. He thanked and thanked to God for success. This was the first time he could get true circle pearl, and found a key to success.

Mr. Mikimoto gazed at me with passionate eyes and told me that he could not write down or speak how he was glad at a true circle pearl.

You may not know how a cultivated pearl is being made. I will tell you, as it is very simple to do. If you can get blessed place from our God, your success is on your foot. How Mr. Mikimoto succeeded is due to the fact that he is blessed by the God.

First make a glass ball about ¼” diameter and insert it in the body of the oyster and immerse that oyster in the water about from one to five years, depending upon the desired size of pearl. During that period, as oyster itself can not bear the pain, will cover that glass ball with his own flesh. In this five or so period, special handling should be paid and according to degree of
carefulness of handling, success or failure is determined.

The pearls made by Mr. Mikimoto's shop have fixed value or estimation among the world's jewellers. You cannot by any way or test determine whether it is natured pearl or cultivated pearl. Many severe tests were made in finding whether it is cultivated one or not, but such an attempt ended in vain.

On front of me there are shown very many kinds of jewels and Mr. Mikimoto showed me one of pearl and explained. He also showed me one of natural pearl and asked me whether I could distinguish both of them. You had better go home jewel store in your city and ask them to show you both Japanese cultivated pearl and natural pearl. That test will convince you better than I try explain you here.

Of famousness of Mr. Mikimoto, I must put women diver in my consideration. Mr. Mikimoto told that that is only his place where women divers are employed. Beginning stage of his enterprise he im-
merged his basket containing oyster on the bed of the sea water, so, in taking it up again, he had to use divers. He found that women in the territory are suitable for the diving work. But increasing wage and difficult to gather the women diver caused him to use other method which will overcome the above difficulties.

So he constructed a frame work and hanged very many bascket from the wood frame by the steel wire to about two feet depth from the sea bed. This will go into about twenty or 30 feet in the water. This story must be very interesting one of your readers, especially women and I hope you accept my labour paid for this.

This Mr. Mikimoto's pearl is not imitated one to natural pearl as "Roman Pearl" or "Venetian pearl."

Hopping to be favoured with your prompt answer.

Yours Very Truly,

[Signature]

AIR SCRUBBER BARS DUST FROM AUTO ENGINES

Entrance of dust into a gasoline engine is claimed to be prevented by a recently invented attachment that clears the air before it reaches the carburetor. As the air passes through a spiral channel, it is rotated at great speed, the gritty matter being thrown outward and held by the walls of the tube, instead of being carried into the motor, where it forms carbon, and grinds down pistons and cylinders.

---

HOW TO TIME PHOTOS IS TOLD BY EXPOSURE METER DOT

By uncovering a piece of sensitized paper on a camera meter, recently patented, the photographer can tell at a glance how long to time his exposure.

If the paper has darkened in four seconds, a snapshot would be wasting the film. For comparison, a normal tint appears on the meter dial, eliminating much of the guesswork of amateur camera owners. The idea has been adapted for use with various lenses, speeds, and conditions of light. When the meter shows the light to be too weak for a snapshot, the length of time exposure is indicated. Disks of photo paper may be replaced at small cost.

In the country east of the great plains and north of Maryland, a little more than a pair of birds is the average to an acre of farm land as shown by a recent survey.
Every Sort of Vehicle from an Electric Lawn Mower to a Small "Tank," and Others Including Motorcycles and a Truck Drawn by a Baby Elephant, Shown in the South Recently

Land transportation had its origin in the prehistoric age, according to scientists. First, the woman was the burden carrier, and, to make her more efficient, trails were created through forests and across plains. These marked the course of the future highways of civilization.

Just when primitive man transferred the load to the back of an animal is a matter of conjecture, but the change was final, and the first step in solving the problem of land carriage. Next came the roughly hewn plank, drawn by a beast. This was transformed into a sled. Then came rollers, wheels, the cart, and, finally, four-wheeled vehicles. These served until the seventeenth century, when the necessity for increasing capacity led to the adoption of wooden rails over which coal, in England, was hauled to river and sea for supplying boats.

With the use of steam, a new era of progress set in that has almost annihilated distance. Gas engines brought the motor car and tractor, and made the airplane possible. Answering the ceaseless cry for more speed, every device known to science has been applied to transportation problems, resulting in the saving of time and increase in human efficiency.

**SHRINE OF STONE AGE YIELDS MANY HEATHEN RELICS**

Relics, estimated to be about 4,000 years old, have been found by scientists in a tomb and shrine of heathen worship built during the Stone Age. Located in the southern part of Sweden, it lay buried beneath ten different strata of earth. Constructed of large rock slabs, it has a central chamber, 10 by 5 feet. Around this is a circular pavement, from which radiate a number of curious walks marked by stones. A considerable quantity of human and animal bones, together with flint daggers and spearheads, were unearthed. Also, there were about 7,000 fragments of ornamented vases, which had been thickly strewn outside the tomb. The shattering of these containers probably took place in connection with heathen religious ceremonies.
“DEAD-AIR” SPACE IN COOKER PREVENTS FOOD BURNING

To prevent food from burning, a pan with a double bottom has been made which may be used for frying, roasting, self-basting, or steam cooking. The outside side is of steel and the inner part of aluminum, with a “dead-air” space at the bottom, which eliminates the possibility of a scorched dinner without the usual watching. When the roast is partly done, the sidewall and cover can be easily removed to allow it to be turned over for browning both sides.

WHERE THE MEN ARE VEILED

While the women of the warlike Tuar reg tribe, residing on a mountainous plateau well within the great Sahara desert, go about with bared faces, custom forces the men to appear in public heavily veiled. Only a narrow slit is left for the eyes in the turban wrapped about their heads. The territory where these people live was almost unknown until 1850, when one of three explorers escaped death at the hands of the desert savages and returned to report his experiences. After a 30-year struggle with this tribe, the French government found it necessary to compromise, so relentlessly did these hooded warriors keep to the fray.
Does a Curse Fall Upon Those Who Touch Mummies and Idols of Mystic East?

Sinister Influences Attributed to Relics and Jewels That Are Believed to Result in Disaster and Ill-Fortune for Those Who Possess Them

WITH the completion of preparations for the reopening of the tomb of Tutankhamen, interest has revived in the curious superstition that a curse falls upon those who disturb the ancient dead of Egypt, bringing calamity to them and their families, even extending to their close friends.

The death of Lord Carnarvon soon after he had penetrated into the burial chamber where the ancient ruler slept among all the splendors of his vanished empire and recent dispatches telling of the illness of the leader of an American expedition to "The Valley of the Kings," again has brought up the question:

"Is the curse of an Egyptian priest, invoked more than 3,000 years ago at the entombment of a king, operating over the centuries upon those who have disturbed his slumber?"

Investigation shows that few authenticated cases of disaster following upon the disturbance of a mummy are so utterly bewildering as that of No. 22,542, which is the British Museum number for a certain relic of an Egyptian priestess of the temple of Ra, in the great city of Thebes.

According to Egyptologists, the priestess lived about 1600 B.C. The only remaining thing belonging to her is the lid of her cofin on which is painted in crude colors the face of the dead woman. The first heard of this sinister relic was its purchase by an Englishman from an Arab at Thebes. Before he reached Cairo, his gun exploded, and his arm was shattered.

One week later he received word that he had lost the whole of his fortune, and shortly afterward, with the picture of the priestess in his possession, he died, poor and miserable. His companion passed away soon afterward.

Misfortunes followed hard upon the mummy relic, which then came into possession of a woman living in London. She lost health and seemed to be dogged by some malign and unaccountable influence. One day a famous Russian mystic visited her. Immediately she complained of a sinister presence. Before she left, she had seen the coffin lid.

"There is the evil influence which I felt on entering the house!" she exclaimed, and implored its owner to get rid of it as soon as possible.

The next owner sent the painted face to a photographer. Although it was just a piece of primitive art, partly destroyed by the ravages of time, the photograph is said to have shown a living face with an expression of intense hate.

Those who hold that the explanation of such a history as this is an occult one, say that it was no less than a photograph of the spirit of the priestess.

However that may be, the last owner of No. 22,542 sent it to the British Museum where, it is only fair to say, the priestess has been behaving and, while there are many stories of her evil doing since then, none of them are credited by the authorities.

Somewhat similar stories are told about a figure of the Gautama Buddha which came into the hands of another London museum in 1911. This idol had been bought by a sea captain during a voyage to India. Before his ship reached England, it caught fire in a mysterious way. The crew, many of whom were Lascars, were afraid of the great teak figure, and insisted upon casting it overboard. Ultimately the vessel was towed into Liverpool, and some time later the Buddha was washed up off the coast of Wales, claimed by the captain when he heard of it.

Following his death—which took place shortly after the recovery of the
Mystic Figure of Buddha, Believed by Natives to be Protected by Ancient Curse That Brings Evil Fortune, Tragedy, and Death to Those Who have Sought to Remove It
Entrance to the Tomb of Cleopatra, and Mummies of Ancient Rulers, before Whose Frowns All Egypt Once Trembled: Their Remains Are Now Only Museum Relics
Idol—his daughter set it up in her house. Then began the trouble. The servants complained of it. One asserted that it moved, another that it frightened her. The children were scared by it, and said they dreamed horrible dreams in which the face of the Buddha peered at them. Visitors were frightened away, and so the figure was given to the museum, where it has remained under close observation without any peculiar manifestations.

Another story of a strange influence concerns the Hope diamond. Everywhere this gem has gone since it was stolen from the head of a figure in a Hindu temple, it is said to have left a trail of death and desolation. It was first brought to Europe by the French traveler, Tavernier, in the seventeenth century. Ruin overtook him in a few years. He sold the diamond to Louis XIV, of France, who gave it to his beautiful favorite, Mme. Montespan. She wore the stone, and quickly fell from royal favor.

Princess de Lambelle was the next victim to wear the jewel, and met death at the hands of a Paris mob during the days of the revolution. After many adventures the stone came into the possession of one Fals, a Frenchman, who, fearful of being accused of theft if he disposed of it, died of starvation.

In 1830, it fell under the ownership of Henry Thomas Hope, a collector, and then, after two generations of quiet, went to his grandson, Lord Francis Hope, who was the victim of many misfortunes.

So long is the list of tragedies connected with the Hope diamond that it would require a full volume to relate its entire history. From the time it was released by Lord Francis Hope, it passed through the hands of men who met with sudden death, lunacy, and bankruptcy.

It was owned by American millionaires, by French dealers, by Russian Prince Kanitovski, by Abdul the Damned. To each it is credited with bringing death and disaster. Its last possessor was the wife of an American millionaire whose son was killed.

Mummy, sacred idol, precious stone stolen from some Oriental temple, what power do these inanimate things possess? Is there any real explanation of the tragic histories with which they are connected?
BRIDES OF NILE IN OLD DAYS COST FOUR DOLLARS

Marriage contracts were in vogue among early Egyptians, according to tablets found in the Nile region by explorers. The earliest-known nuptial contract there dates from 590 B.C., the terms of which were drawn by the husband. It has been translated as follows: "Since God willeth that we should unite one with the other in righteous wedlock, after the manner of every free man and every wise woman, therefore I have given thee four dollars in gold as a bridial gift. And for my part I will not neglect thee. Neither shall I put thee forth without a cause, having legal ground. But should I wish to put thee forth, I will pay 17 dollars for the matter."

SPEED WRENCH CANNOT SLIP AND IS SELF-ADJUSTING

Taking a lightning grip upon any nut within its wide range, a recently patented wrench adjusts itself without a thumb screw, and the harder the pull, the tighter it holds. The mechanism for opening and closing the jaws allows it to be "ratcheted" rapidly, bolts being either loosened or tightened with surprising quickness. There is no possibility of the wrench slipping, or of working loose on the nut face, and, as all parts are made of high-grade steel, it is practically impossible to bend the jaws. A spring aids in keeping its grip in constant adjustment.

So far as is known to scientists, no insect has a fatal bite although deaths have resulted from blood poisoning induced by scratching the irritation.

EVIL SPIRITS ARE CAST OUT BY BLOWING IN EARS

In Zululand, South Africa, native doctors collect rich fees by blowing into the ears of their patients to cast out evil spirits. The medicine man seats the victim on the blanket-covered floor of the outdoor surgery, after announcing that he is to dispel the wicked demons causing sickness. He places a horn to the patient's ear and blows. The ill one generally makes a bad face, cries "enough," and, being convinced that he has been cured, is troubled no more. In severe cases herbs are used as a remedy, when the horn is not effective.

LEAD PENCIL FOR SPARK-PLUG TESTING AIDS AUTOISTS

With a metal tip at the eraser end through which electric current passes, a pencil to test spark plugs has recently been placed on the market. Because the lead is insulated, it is a good conductor of electricity as it passes from the cylinder to the tip of plug. The test is made by touching the cylinder with the point, and the brass cap of the plug with the other end of the device.

In one year, it is estimated, smoke causes a damage of $500,000,000 to property in the United States.
it are called "Spanish hair." Harvesting the moss requires little labor, since it falls from the trees when it ripens. Several methods are used to cure it for the market, the most popular being to pile it on the ground, wetting it, and allowing it to remain for three or four months, during which time it changes its color from green to black. Preparing the plant for dealers already has become a thriving industry.

TEN-DEGREE CHANGE IN SUN WOULD END ALL LIFE

Were the sun's heat to vary ten degrees, all life would perish from the earth, according to a scientist, who says that life here will continue indefinitely as it has existed for hundreds of millions of years. From the color of rays given off, the temperature at the sun is said to be about twice that of an electric arc. If the earth were a ball of ice, this solar heat would melt it in little more than 15 minutes.

TWO ROWS OF TEETH ONRAKE PREVENT DRAGGING OF SOIL

With two rows of teeth placed so that stones and rubbish cannot become wedged between them, a rake that makes a smooth, level surface, has been devised by an eastern inventor. Pulling of the loam and dragging of small plants are also prevented by the extra teeth, which are set behind, and between, the front ones. The prongs, all separated by an inch of space, thus permit the soil to pass freely through them.

SPANISH MOSS BECOMES "HAIR" FOR STUFFING FURNITURE

Spanish moss, that grows so abundantly on the hardwood trees in the swamps of southern Louisiana, has been found of value as stuffing for mattresses and furniture. Although not yet a staple on the market, the product is said to have a growing demand. Dry, resilient, and nonadhesive, it is especially serviceable for upholstering. Owing to its resemblance to coarse hair, certain grades of
ROLLING DICE BY AIRPLANE LATEST OF SPORTS

With giant dice made of light material, aviators now play the game of dice from their airplanes as one of the latest American sports. Placed in front of the machine, the propeller is twirled, and the rush of air sends the dice rolling down the field with the plane in pursuit. The cubes are then placed in position again.

HUSBAND DOES COOKING, WIFE HUNTING, IN AFRICA

Husbands are the cooks and wives the fishers and hunters in Barotse, a province of northern Africa. Though there is a well-organized modern government, the natives still observe some curious customs. It is no unusual sight to see a woman wading in a stream and carrying a big fish basket. When she returns home, the husband does the cooking. Then the wife sits down alone to dine, because, owing to his superior strength, a man might be tempted to take the choicest pieces before the woman gets her share. Another unwritten law is that when triplets are born, two of the babies must be killed for good luck.

“GAT” SHOOTS OIL INTO AUTO UNDER HIGH PRESSURE

Shaped like a pistol, a device is being marketed that is designed to make the oiling of an automobile chassis a clean and easy job. With its 16-inch long barrel, the most inaccessible parts of the car may be handily reached. Operated with only one hand, the instrument shoots out the oil at a pressure sufficient to force it into tiny crevices. It may be refilled by removing a cap at the big end.

CHRISTMAS TREE KEPT FRESH BY WATER IN HOLDER

By supplying moisture to the stem, a stand recently invented for Christmas trees keeps the branches fresh for a long time. Screws in the side of the holder can be set for any size, gripping the tree firmly after it has been pushed down to reach water in the basin. Filling is done through an opening covered by a threaded cap.

To hasten the handling of large amounts of cotton from the Orient passing through San Francisco for further shipment eastward, a fumigating plant is to be built at that port. It will be so located that moving of goods will be made with the least possible delay.
When Banditry and Mechanics Conspired

How a Homemade Cannon Served the Purpose of an "Excellency" of Old Mexico

By SIDNEY MCNEILL SUTHERLAND

[This is the first of a series of articles by Mr. Sutherland, relating his experiences in the land of the Mexican bandit. Particularly capable of portraying the native character and its fascinating background, his stories will be found frequently amusing, often strange, sometimes thrilling, and always interesting and informative. Mr. Sutherland has had rare opportunities to become acquainted with our neighbors below the Rio Grande. Born in Monterey, Nuevo Leon, on April 13, 1888, the son of an American missionary and his wife traveling in Mexico, Mr. Sutherland learned Spanish in infancy. Altogether he lived in Mexico and other Latin-American lands more than fifteen years. Later, his knowledge of the country, the language, and the people, led to his employment at various times as a newspaper correspondent for the many revolutions which have ravished that great country.—Editor.]

In January of 1912, I occupied the dual rôle of news editor of a Mexican newspaper, and special correspondent of a New York daily. For the latter I made many trips into the states of Puebla, Tlaixcala, Guerrero, Hidalgo, Oaxaca, and Morelos, where scores of rebel leaders were indulging in Mexico's favorite outdoor sport—uprising.

The best copy for American readers, aside from incidents affecting American citizens, was furnished by the Zapata brothers, Emiliano and Eufemio, whose bands often raided the incredibly rich sugar, coffee, and tobacco plantations of Morelos. There is an "inside" story connected with the Zapata forays against the Castilians, which has never seen print in this country, and which helps explain the strangely successful career of the Zapatistas.

Gustavo Madero, brother of the president, was a grafter whose sagacity, resourcefulness, and utter shamelessness would arouse the envy of the most conscienceless politician. To Gustavo and his coterie of knaves may be attributed the Felix Diaz revolt and the ensuing collapse of that country. A "chance" bullet fired in front of the Felicista headquarters at dawn of Feb. 20, 1913, ended Gustavo's buccaneering exploits.

Now, Emiliano Zapata and his followers might steal commissary stocks, steers, horses, saddles, and clothing; and he might ravage the cane crops, burn tobacco barns, and destroy coffee mills and residences, but he could obtain scant quantities of the two articles indispensable to Mexican banditry—arms and money. The latter had been transferred by the Spaniards to Mexico City, and the former were kept out of Morelos. Emiliano confined his activities to the state of Morelos; but Eufemio and his cutthroats sometimes wandered farther afield.
"Zapata .... yelled with laughter .... 'dios de mi vida!' he gasped, wiping his eyes."
About the middle of January, a reporter from the Mexican newspaper succeeded in interviewing Emiliano in his mountain lair—no insignificant feat—and on his return told me he had heard that Eufemio was preparing to plunder an American mining camp in Guerrero sometime before February 1. I at once proceeded overland into the Sierra Madre range on horseback, after leaving the train at Iguala, and reached the camp of the brigands three days later about dusk.

After responding as warily as I could to the outer sentry, who challenged me at the foot of the mountain, I was blindfolded and conducted to Eufemio. Proceeding in keeping his men armed. Not strong enough to attack a garrison, he didn't know what he was going to do for carbines and ammunition.

"If I only had a machine gun, or a cannon, or some bombs," he said, "I could surprise a cuartel and supply my valiant soldiers."

A whimsical thought came to me.

"I can't get you a machine gun," I told him. "But I can make you a cannon and all the bombs you want."

"What!" he exclaimed. "You can? O, señor, if you would do that I would—I would do anything you might ask."

"Anything?"

"Anything. Si señor, if you will make a cannon for me I'll agree to do anything. Have you an enemy you would like to have—disposed of permanently?"

"No, thank you," I laughed. "But if you will not molest the gringo mining camp, I'll make the weapons you need."

"Agreed!" he replied.

The next morning, accompanied by twenty ruffians, we rode down the mountain, crossed the valley and ascended the
to the mining camp. I went ahead and explained to the superintendent; and then fired a shot to notify Eufemio to come on. The Americans effusively welcomed the outlaws, who, not to be surpassed in politeness, swept the ground with their sombreros, embraced the señor Americanos, and kissed the hands of the reluctant ladies.

After luncheon, I made the bombs. They consisted of Vienna-sausage tins, tomato cans, and heavy stone jugs filled with black powder and bits of dynamite, of which the Americans had a large stock, and buckshot, bolts, nuts, and broken glass. A small piece of woolen underwear was torn and twisted into fuses, and lengths of rope were looped about the "bombs," furnishing at once a means of carrying the things and a sort of "slingshot" so that they could be lighted, swung rapidly about the head, and thrown 50 yards or so.

I hadn't the remotest idea whether they would explode; but Eufemio, who had drank much warm beer, was in ecstasies, rubbing his hands and proclaiming loudly that Americanos were the smartest people in all the world.

The next morning I made the cannon. I obtained a length of iron pipe, three inches in diameter. In the blacksmith shop, we cut off a piece eight feet long and closed one end by heating it red hot and hammering it down. About two feet up the heated pipe I drove in a ten-penny nail, leaving a hole for the fuse. Back of the farrier's shop was a dilapi-
dated, homemade buckboard which had formerly run on two discarded, wire-spoked motorcycle wheels. I took these wheels, made an axle of a three-foot piece of iron; nailed the cannon to a heavy board, and bolted the board to the axle.

"There's your cannon, general," I said to Eufemio, who had hovered about me all morning.

"Wonderful! Superb!" he exclaimed. "Now, indeed, the forces of liberty and justice shall rout the tyrant's armies, and righteousness prevail throughout our glorious country."

He picked up the rope "traces" and stalked to and fro, pulling the contrivance after him, the end of the plank bouncing over the rocks.

"Immediately following the siesta we shall fire a salvo to salute the new bridge," he announced. "Let us see, we must select a target for practice this afternoon."

"I have it!" he continued, leaning close to me and whispering. "There are a couple of colonels and a major with me that I greatly distrust and dislike. They shall be placed a hundred yards away, and when they are not aware we shall accidently fire in their direction! What say you?"

I said it would be all right with me.

"But, general," I added, "I am not sure how far this weapon will carry. If I had better materials and facilities, I could make you a real cannon. As a matter of fact, it may be more dangerous to fire this thing than to be fired at."

"Very well," rejoined the alcohol-mellowed patriot. "We'll have the colonels..."
and the major shoot the cannon. I can find a couple of other members of my staff to use as targets."

The salute of honor was a solemn affair. The cannon was wheeled out into the yard, the rebels ordered to fall in—at a safe distance; and Eufemio, quite drunk, and I proceeded to load it. We poured black powder into the muzzle until for three feet the pipe was packed tight. Then we filled it nearly to the upper end with scrap iron, worn ball-bearings, and broken cogwheel teeth. I got a piece of cloth, rolled it into a short fuse, and thrust it into the nail hole.

While the Americans, the ladies, and I retreated to a doorway about a hundred yards away, Zapata commanded the two colonels and the major to advance. Proud of having been selected for the post of honor, they strutted forward and stood, one at each wheel, the other erect in the position of gunner. They aimed the "cannon" at a windmill on a near-by eminence, and Zapata sent two other haughty officers to stand at its base to observe and report on the effect of the charge. Then the general joined our party.

The three artillerymen stood nobly poised, waiting for orders.

"Listo!" cried Eufemio; and they got ready.

"Al blanco!" he shouted across the parade ground; and the middle colonel "sighted" the cannon again, and lit a match.

The outlaw chieftain waited a moment until he could control his mirth, the women clenching their hands and turning their faces. Then he cried:

"Fuego!"

The colonel leaned over, lit the fuse and cupped his hands about the tiny spark, blowing vigorously on it to keep it alive.

Suddenly, there was a terrific, splintering roar and a whirl of dust and leaves that completely obscured the spot. Above the cloud, we saw flying sombreros, sandals, a cartridge belt, and pieces of wheels and pipe.

When we reached the place we found a deep hole in the ground, a twisted wheel and three shattered bodies. Zapata threw his hat into the air and yelled with laughter, pounding the Americans on the backs, and kissing me heartily on both cheeks.
"Dios de mi vida!" he gasped, wiping his eyes. "Gringito, I ought to make you a general in my army. This is the most remarkable hour in my life. Oh, what exquisite comedy! Too bad my noble officers died; but thus it is, there must always be sacrifices in the development of science. Well, well! That was an excellent cannon you made, but I forgive you, amigo; and I shall live up to my pledge to spare this mine. I suppose your bombs will be as big a failure as the cannon. But never mind—I have other officers on my staff who shall become bomb throwers in our first battle!"

After effusive adieus the outlaws rode away, Eufemio's laughter echoing along the mountainside.

MODEL POWER BOAT SPEEDS SEVENTY MILES AN HOUR

Fashioned by hand, a model power boat, barely outside the realm of toys, has been made that attains a speed of 70 miles an hour for a brief period. With the same grace and smoothness of a 30-foot craft, it skims over the water by power generated by a tiny steam boiler, heated by a gasoline torch. Building these miniature speedsters has developed into a small industry. Racing them has become so popular that an eastern city has set apart a pond in one of its parks for that purpose.

VISITING CARD, RELIC OF OLD CUSTOM, PASSING OUT

Visiting cards, originated about 170 years ago when messages and names were scribbled on common playing cards and handed to a servant, are said to be passing out of use. This custom, which arose in Paris, became later to be considered crude, and was replaced by cards, engraved with pictures of landscapes, towers, and ruins, with space for written matter. The next development was to have the name printed on the card with some special design instead of writing it, one sculptor using a drawing of a rough-hewn block of marble. A nobleman of the 18th century displayed his name in the midst of an Egyptian picture of pyramids and sphinxes, while a duchess announced herself by a card bearing an illustration of a Chinaman with streaming pigtail, leaning over a fence, pointing to her name. Nowadays, the calling card is not so important as it was in the latter part of the last century, when each visitor to a person's home dropped a highly engraved pasteboard on a polished metal plate as a social requirement.

FOLDING CEILING FAN IS PART OF LIGHTING FIXTURE

Ceiling fan and lighting fixture are combined in a recent invention. When not in use, the four large blades of the electric-light fixture that combines ceiling fan, showing blades out and when not in use, fan fold away out of sight in the ornamental metal part from which the electric lights hang. Starting of the motor swings them out into position. The fan was made to save ceiling space and provide a comfort for home or place of business that is artistic, and that must not be moved twice yearly.

In the mines of India, 50,000 women are employed.
NONSINKABLE BATHING SUIT HAS POCKETS FOR AIR

Made of rubberized silk, a bathing suit made with air pockets so it will float a person in the water, has been patented by a middle-western man. Because the air pockets are not filled until the swimmer gets into water above the knees, the suit looks like any other when worn on the beach. Lowering of the skirt into the water fills the upper part of the suit with air that remains until the wearer leaves the water.

ROLLING BARREL IN FRAME HELPS IN KEEPING FIT

To aid persons in keeping fit, an exercising machine made of a rolling cylinder mounted on a metal frame has been patented. With the back on the cask, the feet firmly placed under straps on a board, the body is twisted left to right and up and down. This is aimed to develop the entire physique. An exercise to reduce weight is moving on the barrel while grasping the parallel bars of the frame.

EGG COUNTER ON HEN'S BACK KEEPS LAYING RECORD

To make an individual record of the number of eggs each hen lays is the object of a recording nest patented by a middle-western man. The egg counter is carried on the hen's back, held firmly by leather straps fastened around the wings. Every time she leaves the nest, after laying, an egg rolls against a setting flap, turning the dial to the next number. If no egg is laid, the flap does not move and the dial on the back remains unchanged. A shield prevents the counter from recording by contact with bushes and shrubbery.

ENGINE IS CARRIED ON TRUCKS, AS TRACK IS TOO WIDE

In South America, where the railroads are built to more than one width, it is often a problem to transport equipment from the seaports to the inland lines. Recently a road in the interior received new locomotives, which had to be shipped

BOOTS MADE OF SHARK HIDE USED BY FISHERMEN

By fashioning the hides of sharks into hip-high boots, finished for use in the mountains or along the trout streams, a northwestern shoemaker has developed a flourishing business. Because the footwear gives such satisfactory service, its popularity is increasing rapidly, and there is a steadily growing demand for the raw product, not only for that industry but for furniture upholstery.
How High Pressure Steam from Boilers is Used to Smother a Burning Oil Gusher, about Which a Wall of Sand Has Been Built to Dam the Flaming Flood
SECRET OF SUBMARINE REVEALED BY CAMERA

Interest in England's large submarine, the K-26, said to be able to cruise across the Atlantic without a stop, is revived by the first pictures of the gigantic craft. Although great secrecy attended the launching, a newspaper photographer, by evading the guards, managed to take a snapshot of the event. Government agents failed to arrest him and then unsuccessfully searched his office for the plates. Within a few hours after the undersea boat had slid from the ways, the newspaper appeared with the photograph spread across the front page.

England's Latest and Largest Submarine Craft Undergoing Trials: Cruising on the Surface the Vessel Is Reported as Capable of Attaining a Speed Equal to That of the Average Ocean Liner

FIGHTING FIRE WITH STEAM SAVES MANY OIL WELLS

In the great oil fields of the West, where the ever-present danger of fire haunts the drillers, steam has been found to be one of the most effective means of combating the flames. As a flash of lightning, a spark from a piece of metal, or a lighted match, may start a blaze that will result in the destruction of millions of dollars' worth of property, ceaseless guard is maintained over the wells. Nevertheless, fires are frequent, and batteries of steam boilers are kept in readiness to fight them, as water would only aid their spread. When a gusher turns into a volcano of liquid fire, it is surrounded by a sand embankment to catch the blazing oil;然后 huge boilers are brought up, and jets of live steam are turned into the heart of the flames, slowly smothering them.

A section of inner tube makes an emergency substitute for a radiator hose.

PHONE NUMBERS ON A WHEEL ARE QUICKLY FOUND

To save time, a revolving telephone directory has been devised by a western railroad for attaching to the upright post of a telephone. The numbers are written on a slip of paper and pasted on the surface of a small, rotating wheel. Light and compact, for large establishments with private telephones, this contrivance also can be used for a record of departmental numbers.
Spectacular Scene in Tableau at Paris Opera Ball in Which Beautiful Flower Fairies, Golden-Hued Birds, and Awe-Inspiring Dragons Sprang to Life at Summons from "Magician"
IRON-ORE ISLAND TARGET FOR AIRPLANE BOMBS

In the Pacific Ocean, near the coast of Panama, the island of Tortola, about 5 acres in size and composed almost entirely of iron ore, has been set aside by the United States government as a bombing target for army airplanes. The rocks, virtually lumps of pure metal, keep it from being destroyed by powerful explosions of the aerial bombs. Boats are prohibited from landing on the island or traveling within two miles of it. Launches patrolling the waters warn all craft, and a red flag, visible for miles, flies as a danger signal from the highest point.

FLOWER FAIRIES AND GOLDEN BIRD APPEAR AT BALL

With a dazzling costume ball that combined the mysticism of the Orient and the grace, the richness, the splendor of the French court before the Revolution, this season's social activities in Paris recently were brought to a close. Against a background of black, a stately King Louis XV and his court marched with royal dignity, a Pompadour was borne aloft by slaves, sailors of an early period swaggered by with backs laden with treasures from India, and the court and theaters of China, with a quaint display of finery, ended the procession. Posing as a Chinese sorcerer, a noted painter suddenly waved a magic wand and summoned flower fairies from the steps of a gigantic staircase. A fantastic golden bird, with iridescent plumage, leaped high into the air, and a great dragon swirled down to devour it.

At the reported price of 3,300,000 francs (about $350,000), the Italian government recently purchased, for patriotic reasons, the famous D'Este Bible, an illuminated manuscript in two volumes. It was formerly among the possessions of the late Emperor Charles of Austria.

AUTO GROUND BETWEEN CARS, BUT SIX ESCAPE DEATH

Wedged between two street cars, an auto was crushed to pieces recently in an accident in the East, yet no one was killed outright and one of the front headlights was not broken. The tires, front fender, radiator, one wheel, and a headlight were the only parts not destroyed. The chassis was bent out of shape, the engine wrecked, and body ground up, but the glass of one light was not even cracked. Six persons in the machine escaped death, but were severely injured. The wrecked auto was an object lesson in safety first.
“Fire Diver” leaping into water in blazing gasoline-soaked suit. Right: How the plunge appeared to the camera’s eye. He was protected from the flames by the speed of the leap.
"FIRE DIVE" AT NIGHT THRILLS CROWDS OF WATCHERS

To thrill crowds, an expert swimmer in a western city, wearing a burning gasoline-soaked canvas suit, dives through the darkness at night from a great height into the deep waters of a bay. The swift plunge of the flaming body in the so-called "fire dive" is somewhat comparable to the sight of the passing of a meteor. Photographers made some remarkable pictures by exposing the camera through the entire dive, from the applying of a match to sinking of the body.

ICE KEEPS FRUITS WARM IN WINTER SHIPING

Ice is used not only to keep fruits and vegetables cold, but also to prevent them from freezing while being shipped in cold climates. This is because ice is a poor conductor of either heat or cold and thus prevents the escape of heat that is furnished in railway refrigerator cars. Plain ice in large metal cylinders serves in winter, while a mixture of ice and salt is needed during the hot months to help cool the air.

FRYING PAN WITH GROOVES TO IMPROVE COOKING

Designed to prevent the burning of food, a frying pan has been invented, the bottom of which has a series of circular grooves so that surplus fat, instead of being partly absorbed by the meat while it is cooking, runs into them. Thus fatty meats fry to a nice brown and are better prepared. The channels are easily cleaned, as the grease prevents anything from sticking to them.

AERIALS OF DE LUXE RADIO PLACED IN BALLROOM

Radio is not so widely used in France as it is in the United States. Expense of the devices is one reason. There, sets are made for use of the wealthy, who place them in the drawing room or ballroom, where they harmonize with costly furniture. One type is made to be placed on a table, the aerial being a ten-sided frame on top of the set. Close by, the magnifier is mounted on a 6-foot, ornately carved pedestal. This particular apparatus employs no outside wires.

FLYING FUR-BEARING ANIMAL REPORTED FOUND

Without wings and heavier than air, a newly discovered type of fur-bearing animal, or bird that can fly, was reported recently to the French Zoological Society from the wilds of French Cochin China. About the size of a cat, the creatures are said to rise to a height of several yards by distending their stomachs until they appear like small balloons. Off the ground, they remain either motionless or slowly paddle themselves along with their webbed feet, not unlike the flight of a dragon fly, but lacking in its speed. The creatures have bills like ducks.
OYSTERS ATTACHED TO GUN ARE FOUND ON BEACH

Oysters attached to the butt of a rusty revolver were found recently on a beach in the South. They had taken several years to develop a firm grip on the weapon that probably had been thrown from a ship long ago. Although it contained cartridges, they could not be removed because of rust on the cylinder and in the chambers. The weapon is being shown in a museum.

BOOK COVER HIDES A VANITY CASE AND MANICURE SET.

Manicure sets and vanity cases are now being combined in holders resembling books. When the cover is opened, the tools fitted in a folding roll, may be spread before the user. It can be kept on the dressing table or taken as a convenience when traveling about. The cover, decorated in the same way as ordinary volumes, can be fastened when closed.

PATENT GIVEN TO THE PEOPLE.

For the benefit of the public, the government has patented a water-resisting glue developed by one of its research departments. Any person may obtain the directions for its manufacture by applying to the bureau. It is an improvement on a glue made during the war by adding certain copper salts to the old formula, giving it more strength, resistance to moisture, and better working qualities.

SOVIET PICTURE CARS DRAW INTEREST OF PEASANTS

Throughout Russia, the Soviet government’s picture trains, designed to teach communism to great masses of illiterate farmers, have attracted much attention. Huge crowds greet the cars and show great interest in the drawings that cover the coaches inside and out. Lecturers and government officers use the illustrations to show that the workers fare better than they did under the czars. These trains have been placed on all railroads, so that most isolated sections are reached by them.

RACK KEEPS TOOLS OR CLOTHES WITHIN EASY REACH

Tools that are easily mislaid or damaged by rough handling, can be protected when not in use, by a rack with hooks curved to the side, making it convenient to take down or replace articles quickly. The holder becomes a handy space-saver when attached to walls of garages and dwellings, or within reach of workbenches. By substituting it for nails and screws around bathrooms, and over kitchen sinks and tables, regularly needed household utensils can be kept clean and safe from damage. Fastened to ceilings, the undersides of shelves, or in small closets, the rack offers a neat arrangement for hanging up clothing without danger of wrinkling.

Found recently in the Tonga Island of the South Pacific Ocean was a turtle supposed to have been left there in 1773 by Capt. James Cook, the English mariner. Its finder reported that it was blind and creaked like an oxcart when it moved.
Remote Corners of the Former Land of Czars Are Reached by Agents of Russia's Bolshevik Rulers in Trains Adorned with Picture Stories and Exhibits of Soviet Government
With almost wizardlike touches of the hoe and spade, combined with inventive ability, a retired business man of the West has turned his back yard into a fairylike garden producing more than 160 varieties of fruits, vegetables, nuts, and flowers, bringing him a return of about $2,500 yearly. By an unusual arrangement of planting it is practically two gardens, one for small crops close to the ground, and another, elevated, for rambling plants.

Racks ranging from 10 to 40 feet in height support the vines of climbing plants. When one of these begins to form fruit, frames are erected to hold them well up in the air, where they receive plenty of sunlight.

A profitable section of the garden is that devoted to savory herbs, such as thyme, sage, caraway, dill, anis, wormwood, mint, and others, whose dried leaves and seeds are sold to druggists.

Crowded into this small space are 12 fruit trees, all bearing. Strawberries are grown in barrels to save space, while castor beans are planted in out-of-way corners, their stalks serving as climbing racks for beans and other vining vegetables. Twenty-five grapevines produce fine table grapes, for which the grower receives the highest market prices. Last year he sold 300 pounds of walnuts, 300 pounds of almonds, 350 pounds of peaches, 150 pounds of apricots, 140 large navel oranges, which brought 10 cents each; cut 28 pumpkins and squashes, picked as high as 50 pounds of beans a day, gathered hundreds of melons, and then donated specially developed seeds, bulbs, cuttings, and roots to farmers' organizations and civic clubs.

Accurate crop rotation makes possible this heavy and varied yield. Before one crop has ceased to produce, another is planted between the rows of the first. Every summer the soil is treated with fertilizer and the upper crust removed.

**MINING THE AIR FOR GAS "ORE" IS PROFITABLE INDUSTRY**

From sinking shafts in the earth, engineers have advanced to "mining" the air for gases important in the commercial world. After liquefying the air by subjecting it to heavy pressure, the various elements are separated. Oxygen obtained in this manner is used in oxyacetylene torches for welding and cutting steel and iron. Nitrogen and argon are employed in filling incandescent lamps. Neon, one of the rare gases, which is very sensitive to electricity, is used for testing spark plugs and in the manufacture of electric signs. It is said that $30,000,000 is invested in air-products plants in America.
U. S. ENLISTS SQUIRRELS' AID TO REFOR EST TIMBERLAND

With the aid of squirrels, great areas of timberland in the Far West, lately burned over, are to be reforested by the government. At one time a price was set on the little animals' heads because they destroyed birds' eggs, but when the government offered to pay for green-pine cones, it was found that these could be obtained only with their help. The squirrels climb to the tops of the trees while the cones are still green, bite them off and carry them to nests from which they are taken by the forest rangers. When the government first obtained all the cones wanted, they were stored in a large warehouse that was destroyed by a fire originated by spontaneous combustion. Again the rangers went to the squirrels for help, and it was found that the animals stored the cones end to end to allow the passage of air. This arrangement was copied and no further trouble with fire was experienced. As a reward for their aid, the forestry service has ordered that only a few of the cones be taken and that others be left for the needs of the animal that gathered them.

PLANES RUN BY MUSIC ROLL WITHOUT AID OF PILOT

Without passenger or pilot, airplanes have been made to operate by means of an electrically controlled roll of paper perforated in the same manner as a music roll. With this device a plane has been started on a long 20-mile flight, attained a height of almost a mile and a half at the end of the third mile, released a dummy bomb, circled for several miles, descended to 1,500 feet above the ground, snapped a photograph, and finally returned to its home station and negotiated a safe landing.

MAILS BAR IMPORTED BEES BECAUSE OF DISEASE

Because adult male honeybees are now subjected to a strange plague in many foreign lands, importing of bees through United States mails was forbidden by recent order. They may be sent in from Canada, though, because the government believes careful efforts are being made there to prevent spread of the plague. If for scientific purposes, special orders may be obtained, to permit sending them by mail.

ELECTRIC SCRAPPER FOR SHIPS CLEANS SCALE AND RUST

For removing barnacles and rust from steel hulls of ships, an English inventor has designed a scraper driven by electricity. Light in weight, it is easily held against the metal plates without exhausting the operator. Goggles must be worn for protecting the eyes from the fine particles it throws off.

BABY CRIB FOR TRAVELERS IS EASILY CARRIED

To overcome the difficulty of putting a baby to sleep in a strange bed, a collapsible crib that can be carried or shipped easily as part of the luggage, has been patented for travelers. When not in service, it folds into a compact package, 4 inches square and 40 inches long, weighing 40 pounds. To set it up or dismantle it, four thumb-screws in upright posts are loosened or tightened. As the sheets covering the framework are easily removed, and clean ones substituted, a sanitary bed may be provided for the baby at all times. Either of the long sides may be lowered, thus enabling the mother to place the crib against the side of her bed so that the child may sleep near her.

Once reckoned one of the fastest vessels of its type in the world, the "Glory of the Seas," a famous clipper ship, was burned on the beach near Seattle recently, after efforts to have it preserved as an historic relic had failed.
FIVE HUNDRED DUCKS KILLED BY ONE SHOT

More than 500 ducks were killed by one shot from a nine-foot gun, similar in appearance to a muzzle-loading rifle, used illegally by poachers on an eastern river. It has an inch and a half bore and is discharged by a percussion cap. Under cover of darkness, the poachers would slip up on a flock of ducks feeding along the river edge and blind them with a powerful searchlight. As the birds fluttered aimlessly about in the strong glare, the piece would be trained on them, a single shot bringing down hundreds. Government officials finally captured the law breakers after hiding for five nights in succession.

CALENDAR FOR CLOCK TELLS DATE, DAY, AND MONTH

Although all months of the year do not contain the same number of days, a date attachment for clocks, recently patented, overcomes that difficulty and makes it possible for a timepiece to automatically give not only the date, but the day of the week and the month. Any clock may be equipped with it. The device needs no regulating.

POUND OF SUGAR COSTS MORE THAN SOME JEWELS

Sugars that cost from $75 to $375 per pound, because of the excessive care required to make them, are used in scientific laboratories. One is useful in detecting typhoid germs, as these tiny organisms multiply rapidly when feeding on it. A sugar, made from corn cobs, brings $120 per pound, while another, manufactured from scraps left over in making vegetable buttons, sells for $140.

SOAP IN NOZZLE SPRAY AIDS IN WASHING DISHES

For quick and easy dishwashing, a nozzle that sprays either soapy or clear water, has been invented to connect with any faucet. Pressing a trigger above the handle causes a strong stream of soapy water to flow against a wire tray. Releasing it brings a spray of clean, hot water. It has no delicate mechanism to get out of order, needs no power, and does not require cleaning. The washer also may be used to cleanse vegetables.
Miniature churches on wheels are being used by a missionary society to carry forward its work in the sparsely settled sections of the United States. Already three railroad cars have been put in service in the South and West, visiting small towns that are churchless. One of these cars is 86 feet long and is equipped with pews for 75 persons as well as an organ and other fixtures of a church. It is lighted by electricity, and running water is supplied by overhead tanks. The same organization is experimenting with a motor chapel, which, unlike those that have appeared in several foreign countries, is built on a trailer instead of being fastened directly to the frame, similar to the ordinary touring car.

SAIL HITCHED TO WINDMILL FIRST BY MISSIONARY

As a result of a missionary's observations nearly three quarters of a century ago, the manufacture of windmills has developed into a large industry. He originated the device that makes it possible to automatically regulate the speed of those machines. Stationed at the Bad River Indian reservation in northern Wisconsin, the clergyman needed a wind-driven pump to supply water for the post. Windmills of that day could not be kept into the wind, or the speed regulated. Noticing that the sail of a boat would swing into a position with the wind if unrestrained, he reasoned that a perpendicular saillike rudder fixed to the wheel, and mounted on a pivot, would keep it broadside to the air currents. From that idea came the modern windmill that often furnishes enough power to run several pieces of farm machinery, besides pumping the necessary water.

NUTS ON DOUBLE LOCK BOLT CANNOT WORK LOOSE

Unique in design, a recently patented bolt has two nuts, both of which turn in the same direction, but while one moves upward, the other goes downward until the two lock at the desired point. This movement is the result of the positions of the threads. Any pressure exerted on the nuts, either from above or below, only tends to lock them more firmly together. They afford the maximum amount of security when adjusted and are not affected by jars or vibration such as they would be subjected to on automobiles.
STUNTED forests, cathedral-like caves, a jungle wilderness of beauty and of death far from the beaten paths of civilization, are described by explorers for Field Museum, Chicago, who recently returned from a 7,000-mile trip through the wilds of Peru.

Outlaw bands, strange Indian races that are said to eat their grandparents, bloodsucking bats known as "vampires," "whisky-faced" monkeys, "oil birds," and a curious rodent called the "dinomys," of which there is said to have been only one previous specimen on exhibition in the world, were encountered.

With the record of the hardships of his expedition written in the deep lines on his face and with his left arm in a black sling, slowly mending after four operations, Edmund Heller, companion of Theodore Roosevelt in the latter's explorations in Africa, told of the adventures he and his wife met with during their 14-month trip through one of the least-known and almost uninhabited regions of South America.

In his search for rare specimens for a middle-western museum, the two covered thousands of miles of trackless jungle, infested with numberless wild animals, and traversed countries where epidemics of terrible, nameless diseases had swept away almost the entire population. Sluggish tropical streams were forded in long, unwieldy dugouts under canopies of rank vegetation through which the sunlight dripped like sewage through a filter.

Sometimes cutting a trail afoot through almost impenetrable forests, then riding pack mules down into sizzlingly hot jungles and on into cold moorlands where civilization ends, they made their way to a plateau elevated 12,000 feet above the sea level, where they found a tribe of Inca Indians who could not live in lower altitudes. Before
Rare Rodent Known as the "Rucupi" Following the Explorer, Who Made a Pet of It, and Below, a Camp Pitched on the Edge of a Swamp near the Huallaga River. A Few Miles Away is the Cave of the "Oil Birds," with High-Vaulted Ceilings as Beautiful as Those Described in Fairy Stories. It Was There That the Explorer and His Party were Charged by an Ocelot. Firing into the Dark at the Gleaming Eyes, the Naturalist Wounded the Animal and Finally Killed It.

Snowcapped Peak of Lofty Andes Whose Slopes are Covered by Dense Forest, Inhabited by Descendants of the Incas, Who Cultivate Coca, from Which Cocaine is Extracted.
surmounting the Andes, a group of outlaws was encountered. There were no laws and no taxes and most of the inhabitants were fugitive murderers.

"Their leader was quite a nice chap," declares Heller. "He had killed a few men, I understand, but he treated me very kindly."

In company with the bandit chief, he visited a cave inhabited by "oil birds."

"As beautiful as those in fairy tales," the explorer said, "the cave looked like a great cathedral inside. Birds—thousands of them—lived there."

In the darkest corner of the cavern, two flaming eyes stared out at the intruders. With a gasp, Heller raised his gun, which was loaded only with bird shot, and fired.

Before the thunderous echoes and the noise of invisible wings subsided, a furry shape rolled to the feet of the party. As they stared down, it moved and a native, armed only with a knife, jumped on it, slashing wildly.

When finally the animal was killed, it proved to be a large ocelot. Some of the birds that fell at the shot were seized by the guides and later squeezed to obtain something resembling olive oil. This was used for everything from rheumatism to food.

Then the march was continued through uninhabited wilds where it rains every day. Here was found an anteater that has a tail which it uses for an umbrella; a vampire bat that comes by night and sucks the blood from horses and other animals, and of human beings if it can find an arm or a nose sticking out from under the bedclothes.

Strange pets were encountered that ate and slept with the explorers. There were opossums that lived among the luggage a small weasel that made its home in a stocking while traveling, the young "dinomys" which was called by the native name of "rucupi." Weighing 10 pounds, the latter was carried by the explorer, but, as it grew, a porter was provided, and later a horse, for its convenience.

In Para, Brazil, where the journey ended, one of the pets bit the explorer severely on the left forearm. Blood poison set in and for a time he was in danger of losing his arm.

Another scientist attached to the same museum, Karl P. Schmidt, who recently returned from a lengthy trip in the wilds of Honduras, tells of capturing a 5-foot crocodile with his bare hands.

After a long journey through dense tropical swamps, the scientist's party arrived at a small lake.

Peering through the undergrowth that surrounded the shore, the naturalist sighted a crocodile, and, armed only with a small-caliber rifle, hastily clambered into a clumsy dugout and paddled feverishly after his quarry. The animal silently lowered itself from its log in the sun, bubbles of marsh gas on the slimy surface marking its tracks.

"Here he is!" shouted the hunter to his companions on shore. And the chase was on. Paddling rapidly, the lone canoeman kept within a few feet of the monster, prodding it continually with a long pole.

Suddenly, the vegetation parted at the bow of the canoe, a yawning snout was thrust forward, with its rows of hideous teeth. A hastily aimed shot missed—and the "croc" again slowly started to sink.

Throwing aside his light rifle, the explorer leaped into the shallow lake, grasped the creature and waded ashore.
Great Ant Bear and Native Boy

Fording Tropical Stream

and, Below, Explorer's Party and Pack Train of Llamas Traversing Cold Moorlands in Snowcapped Mountain Region
STEPS ON THROTTLE INSTEAD OF PULLING IT OPEN

To replace locomotives on short-line runs, a railroad in the central West has constructed a specially designed gasoline engine, similar to that of an automobile, that is capable of pulling two steel coaches at a speed of 70 miles an hour. One of the cars is entirely for passengers while the other is divided into the engineer's cab, a baggage room, and a smoking compartment. Officials of the road assert that this equipment provides better service to patrons off the main line.

CITY BURIED BY DESERT SAND YIELDS ANCIENT CULTURE

In search of additional traces of an ancient civilization, a Russian explorer who discovered the city of Kara-Khoto in the shifting sands of the Mongolian desert, recently announced his intention to lead a second expedition through that section and Tibet. While outlining the plans of this venture, the scientist related the difficulties encountered on his first trip. For years there had been rumors of a dead city, abandoned by its inhabitants centuries ago. Nomadic tribes were suspicious and declined to help. Working patiently, however, the explorers employed a Mongolian to travel about in that region in the guise of a merchant in an effort to obtain information. The natives shunned this representative of the foreigners until a storm one night compelled him to camp near the buried city, although he was unaware of the fact. After that, no more trouble was experienced, as the natives regarded that incident as an indication of the favorable attitude of their gods. Although the ruins of streets and houses had been worn down by wave after wave of traveling sand hills, many remains of Buddhist temples, Mohammedan mosques, packages of Chinese paper money, inscribed with threats of death for counterfeitors, silver ornaments and coins, all apparently carefully hidden by the original owners, were found. Outside the walls was a cone-shaped monument containing a library of 2,000 books, written in seven Eastern languages. Other relics helped to substantiate legends about the fate of the inhabitants. In the thirteenth or fourteenth century, the Chinese sent an army to capture Kara-Khoto. The siege waged for years until a Chinese engineer conceived the scheme of blocking the river that flowed through the city and gave the inhabitants their water supply. Bags of sand were thrown across its channel and the course diverted. The besieged, frantic from thirst, sought water by digging a well within the walls. But that failed. Then in desperation, the chief ordered the populace to bury their treasures and killed his wife and daughter with his own hand. In the battle that followed all the inhabitants were mercilessly slain by their foes.

HURDLE RACING FOR DOGS IS POPULAR SPORT

Matching greyhounds, the speed kings of dogdom, in hurdle races has become a popular sport. Throughout the United States there are many kennels devoted almost exclusively to the raising of these fleet creatures for the racetrack. At a recent meeting in an eastern city, greyhounds from all parts of the country participated in what was termed a world's championship contest.
SHIP FOUND ON BIG ICEBERG REVEALS MYSTERY OF SEA

For centuries mystery ships have sailed the seas, guided only by the winds of chance. One of them was found by a steamer captain rounding the Horn recently. While grooping his way into the open, a gigantic mass of ice carrying a large three masted schooner, with its boats still in the clefts, was sighted. Efforts were made to find the survivors but no trace of them was discovered. Another sea tragedy was added to the already long list of those as yet unsolved when a Greenland whaler came upon a strange looking derelict, battered and weather-worn, apparently built in the last century and ice bound for years. A boarding crew found in the cabin the body of a young woman, preserved by the arctic frosts. Near a long dead fire was the remains of a young man, still holding a flint and steel.

PETRIFIED FOREST, MILLIONS OF YEARS OLD, FOUND

Millions of years old, petrified trees, presumably the remains of a forest of 2,000 acres or more, have been excavated in the vicinity of Pikes Peak, Colorado, at an altitude of 8,000 feet above sea level. The trees are covered with a strata of volcanic ashes and lava and appear similar to the redwoods of California, which flourish at an altitude of 2,000 feet. The theory has been advanced that when the Rocky Mountain range was formed by expansion of the earth's crust, the existing mountains in this locality were elevated another 6,000 feet, and that Pikes Peak, then a crater, turned loose a destructive flow of fiery liquid which leveled the forest.

RADIOTELEPHONE THAT CARRIES VOICE THROUGH EARTH, WATER, OR STONE WITHOUT USE OF AERIAL

Talking through solid stone walls from submerged submarines or from below the earth's surface, is said to be possible by means of a radiophone invented recently. Use of the instrument, it is believed, will reduce the hazards of underground and undersea work that have caused the loss of hundreds of lives in the past. Entombed miners or laborers entrapped in fallen caissons, men engaged in the building of tubes under water, and crews of disabled submersibles, will be able to direct the work of rescue with the device. Simply constructed, it requires no aerial or ground and is so compact that it may be carried easily. Power is supplied by small dry batteries which operate novel transformers, these generating the electric waves. It has a range of 200 feet under ground.

SO OIL TRUCKS CAN'T EXPLODE

To carry away static electricity from oil trucks and thus lessen the possibility of explosions, iron chains that dangle to the ground are fastened to the frames. The same principle is applied to oil pumps.

A crutch tip on the head of a hammer serves as a rubber mallet.
ONE-MAN ADJUSTABLE SAW WEIGHS BUT SIX POUNDS

Folding into a small space and weighing only 6 pounds, a one-man saw recently invented is provided with a handle adjustable to almost any angle. It permits the worker to stand erect, thus doing away with tiring strains. Hand grips attached to the frame may be moved back and forth to meet requirements. When not in use, the saw may be folded up and carried easily.

WEIRD DRUG-CULT IS DYING OUT IN THE FAR WEST

Chewing peyote, found in the top of the spineless cactus, is said to make members of an Indian cult confess their sins. For 20 years the cult, known as Peyotism, now passing out of existence, has been a picturesque religion in the West. Their rites are conducted while the members are under the influence of the drug. A ne'er-do-well of the Indians, who became a victim of the peyote habit, introduced the religion to his people after weird visions had come to him while under the influence of the drug.

WORLD'S OLDEST LIVING THING SAVED BY HIGHWAY

Construction of a highway is preserving for future generations the oldest living things on earth—the big trees of California. The Redwood Highway, the first links of which have been opened to travel, is to pass through the forests and groves of redwood that still dot the Coast Range mountain country, where it is believed the giants began to grow before the dawn of Christianity.

By reserving some in national parks and forest preserves, the government has saved many of the groves from the lumberman's ax, and at the same time provided places of interest for the tourist. Protective organizations that turn over each grove as rapidly as funds can be raised to buy it, to the state, have found most of their aid coming from the motorists who see and admire the big redwood trees while traveling over the roads passing through them.

This tree grows about 30 feet in its first 10 years, and thereafter very slowly, until at the age of 60 years it is only about 60 feet high and not more than 14 inches in diameter. They are believed to have required from 10 to 20 centuries to reach the present size.

ARROW POISON TO KILL BUGS IN PLACE OF NICOTINE

From the tuba root, formerly the source of a death-dealing poison with which the "wild men of Borneo" coated their spear heads, and which is still used in the Malay states for killing fish, scientists have developed an insecticide reported to be a substitute for nicotine. Although the plant is poisonous to man as well as insects and animals, the experts hope to extend its use to relieve the shortage of bug-destroying drugs. The fatal fluid is crushed from the green stems, or drawn from the dry roots with chemicals.

WIRELESS RAY CONTROLS BOMB TO BLOW UP BATTLESHIPS

Touched off by a radio ray, a bomb has been invented that is powerful enough to blow up a battleship. It is said to be so small that one could be carried aboard without detection, and, after concealment, exploded by a special wireless wave released many miles away.
Hundreds of Radios Are Used to Broadcast Weather for Millions of Persons

Farmers, Sailors, and Shippers Are Protected by Government Service That Sends Out Warnings of Approaching Storms

So vast has been the progress of radio development that now its swift energy is being harnessed to broadcast weather reports, resulting in untold savings for farmers and shippers, and adding to the safety of navigation. Government experts were quick to see the importance of a recent report that 573 broadcasting stations had sprung up throughout the country, and that between 2,000,000 and 3,000,000 people “listened in” daily. Only one state, Mississippi, is without a broadcasting station.

As a result, it has been planned to extend perhaps the greatest weather-broadcasting service in the world. Already more than 150 stations are sending out weather news, and the number is being increased daily in response to demands from both rural communities and cities. Besides the larger stations, there are many smaller ones that pick up the reports and pass them along.

From the great naval plant at Arlington, the wireless telephone sends out forecasts three times every day. From others there are two reports daily, one in the morning and another at night. So interested are the farmers in the service, that they have sent in many demands for it to be speeded up.

“Can’t you folks get the weather here before I have to go to bed?” one rural citizen in Minnesota wrote to his congressman.

Investigation disclosed that he had been receiving the reports every night at 10:05 o’clock on a homemade radio “set.”
built and operated by his young son.

To help those who retire early, efforts are being made to get the forecasts out before bedtime, but, because of the large amount of work required to make them up, it has proven quite difficult.

Surrounded by many strange instruments, the government scientists watch the progress of storms, cyclones, cold waves, and hurricanes moving across the country or approaching it from the sea. As a result, they are now able to predict floods as much as ten days or two weeks before they happen.

One of the latest developments has been the charting daily of the upper-air currents thousands of feet above the earth's surface. This is done with toy balloons that sometimes reach a height of several miles. Besides being of value in making general forecasts, the results of these experiments have proved of great aid to aviators, enabling them to pick air levels where winds are favorable to their journeys.

Weather maps made up every morning and night show the results of hundreds of reports sent into five forecasting centers by telegraph. Information from ships received by wireless also is used in charting the course of storms before they reach the seacoast. Experts regard the wind's force and direction as the principal factor in making their predictions.

By charting the high and low pressure areas as they exist in all parts of the country at a given time, and knowing the cloud movements, changes that will take place in any section within 36 hours can be told with the greatest accuracy.

"Will next week be good haying weather?" the farmer wants to know, and the answer is sent to him, wherever he may be, by radio phone twice a day.

"Will orchard heaters be needed tonight?" the vineyard owner inquires before retiring, and looks at the map he has received by rural delivery that day to find out.

"What degree of cold must I protect this citrus fruit against?" the western shipper wonders, and the reply comes in an instant over the telephone he uses to connect him with the nearest weather man.

These are but a few of the ceaseless activities of the weather bureau in protecting the lives and property of the citizens of every community.

Warnings have been sounded by the weather man from 12 to 24 hours in advance of every big storm on the Great Lakes or ocean coasts of the United States for many years.

Eighty-eight and four-tenths per cent of the daily forecasts are accurate predictions of conditions 36 hours later, and scientists are seeking, by use of new methods, to make them more exact.

Delicate instruments record the duration of sunshine, and whirling thermometers, with wet and dry tubes, measure humidity of the air. Anometers show velocity of the wind, and gauges register the amount of rainfall.

The barometer and a device, called an aneroid barograph, indicate air pressure. Sitting in his office, the scientist can read the outdoor temperature on a telethermograph that rests on his desk. Some of the stations use a triple register to record sunshine, rainfall, and speed and direction of wind.

Areas of high and low air pressure are foretold when the scientists know at what speed and in what direction winds are moving. This information is received from hundreds of observers and charted on the weather maps and in the records.

Study of cloud movements and careful comparisons of maps showing weather for several days past, are used as a basis for the forecast.

Most of the weather in the United States, according to government observers, comes from Canada. Because of its central location on the continent, Medicine Hat is noted for the storms which have had their origin there.

As far back as the records go, however, it is declared that there has been no perceptible change in the weather of the nation, either in the heat of the summers generally, or the severity of the winters.

CROSS IS MADE WITH PINS TO REPRESENT JEWELS

Although 92 years old and an inmate of a home for the aged, a western man recently completed a reproduction of a famous jeweled Holy Cross studded with thousands of pins inlaid in the original. More than 15,000 pins were required in its making, each carefully placed to follow the design of the original. Weeks of painstaking effort were necessary, yet the finished article was exact in every detail, even to the intricate patterns formed by the priceless gems. Brooches set with clear and colored glass were used to represent diamonds, rubies, and amethysts, while opaque-headed pins served as pearls.

ELECTRICITY TO AID IN WAR AGAINST BOLL WEEVIL

Electricity is the latest weapon of science to be used in the effort to exterminate the boll weevil in the cotton states. With its aid, cheaper methods have been devised for producing a poison that has proved deadly to the insects. Heretofore, it is reported, the supply has been short and the product expensive, since nitric acid, one of the principal chemicals in the old mixtures, has fluctuated considerably in price. With these two drawbacks eliminated, the experts expect the insecticide to become more popular, resulting in larger yields and fewer losses. It is estimated that 700,000 pounds are needed annually, yet only 30,000,000 pounds are now used. The boll weevil first came to the United States from Mexico, and within 15 years has spread throughout the South. Authorities figure that the annual damage caused by its ravages amounts to almost 400,000,000 dollars.

ONE MAN'S INVENTIONS KEEP MILLION PERSONS BUSY

Through the inventive ability of Thomas A. Edison, nearly 1,000,000 men and women in America alone, it is estimated, are furnished steady employment. For the most part, the work is clean and wholesome and the employees well paid. Thousands are engaged in the manufacture of electric-light bulbs, one of his greatest discoveries, and in making phonographs and other devices.

DIG NEW BED FOR ISAR RIVER

By changing the course of the Middle Isar River, Bavaria expects to possible the development of an electric current totaling 480,000,000 watt hours a year, an output that will put the plant among the largest of the world. It is estimated that this use of water power will result in a saving of 500,000 tons of coal annually. In digging the river's new channel, 7,000 men were employed.

CRANKLESS FREEZER FOR ICE CREAM SAVES LABOR

In a crankless ice-cream freezer now on the market, ice and salt are packed around the cream can and also in a metal tube that extends through the mixture. In this way cold comes from all angles, making the double freezing even. Because of its lightness, the freezer can be carried on autos and to picnics. Freezing takes place in about an hour and 15 minutes for cream.
FORTY SEARCHLIGHTS EQUAL MILLIONS OF CANDLES

During a celebration in a midwest city, 40 big searchlights throwing 450 million candlepower of light, were used to illuminate the place at night. Towers 90 feet high, each festooned with 50,000 crystals, shed floods of dazzling splendor, rivaling the rainbow in gorgeousness. Around the bases of these minarets, a forest of water jets seemed to spurt liquid light into the air, and sparkled under the spangled hues cast upon them from the jeweled draperies above, while electrical displays were used to strengthen the effect of the crystal designs.

Jeweled Minaret Draped with 50,000 Crystals That Reflect Floods of Rainbow Tints: Water Jets Serve to Give It an Appearance of a Fountain of Liquid Colors

SOFT CORAL ROCK HARDENS WHEN USED IN HOUSES

Houses in the Bermuda Islands with walls of coral rock are cool and fireproof. The substance is a poor conductor of heat. Slabs for roofing are made waterproof by being covered with a coat of asphalt or tar and then whitewashed. Because under the surface the rock is almost as soft as cheese, though it looks like a chalky limestone, it can be cut with primitive tools. It is quarried in blocks 6 feet square and several feet deep, and broken off with a strong pole. Natives with big saws cut these pieces into various sizes for building. When exposed to air they become hardened. If in contact with weather for some time, the rock breaks into pieces, but when used for interior walls, it is said to be ideal, as it keeps out heat and is fireproof.

It is a generally accepted rule that the more brilliant the color of a flower, the less fragrant its perfume.
Passing of the Lumberjack Recalls Heroic Drama of the Woods

Days of Rawhide for Leather, Buckskin for Cloth, and Venison for Beef, Are Followed by Chugging Switch Engines, Portable Sawmills, Electric Lights, and the Radio

As heroic and romantic a figure as the scout, trapper, or Indian of frontier days, the lumberjack is fast fading from the screen of American life.

Wars, raids, and feuds of one camp against another, where iron fists, backed with 190 pounds of muscle, took part in free-for-all, knock-down-and-drag-out, kicking, and gouging battles, have passed into memories of an age that is rapidly passing away.

In the vast solemn forests of the North and West, the ring of the ax is still heard, flexible ribbons of steel sing as they bite through the pine under the graceful swing of powerful shoulders, and the "Hi! yup!" cry of the teamsters echoes through the thickets of birch and balsam.

But above it all comes the shriek of a switch engine, the shrill whine of a circular saw tearing apart the logs, and in the clearings are ugly frame buildings covered with tar paper and equipped with electric lights, phonographs, the latest magazines, and radio sets, that have replaced the picturesque log camps of former days.

Although the twentieth-century lumberjack is pretty much the same kind of a man that he was thirty or forty years ago, when logging was at its zenith, he has been surrounded by the comforts of civilization, and, as a type, is rapidly disappearing, like the forests he loved, before a machine-made civilization.

Stalwart, powerful, self-reliant, bold, he is the same masterful man of the woods as of old, juggling with death a dozen times a day, tugging and straining with his peavey under a tangled wall of timber, behind which presses the full power of a spring freshet, jumping with the agility of a cat from one bit of unstable timber to another when the first sharp crack warns him that the mass is about to break down on him like a wave on the shore.

With quiet, humorous eyes that smile a challenge, and movements as quick and certain as a panther's, he still rides logs down rapids where loss of balance means injury or death under some following battering ram, and pries at key logs in the rollways on the banks of a stream, until the whole pile begins to rattle down like a cascade, forcing him to jump, ride, or even dive, to safety.

But as forests are turned into miles of dreary stubble, the ranks of the old-time woodsmen are thinning and the days
SPLITTING FALLEN MONARCH OF THE FORESTS

After It Is Down, the Hemlock Giant is Divided by the Spreader and Cut into Smaller Logs That Are Easier to Transport to the Railroad Siding for Shipping.
when the "gang" boiled into some little lumber town on a "jamboree" are gone forever.

Having proved his ability to work unerringly in great extremes of temperature, to master the science of "felling" trees so they will not damage those still standing, or shoot down mountain sides, the man who bears the proud, but ugly, name of "hick," looks with scorn on the clumsy alien laborers who follow him and cut out the small "paper" wood after the hemlock, birch, maple, beech, and poplar trees have been disposed of.

While cutting methods have changed greatly in the past score of years, the lumberjack must still be able and willing to find his place in the forests on dark winter mornings when the thermometer is down to 30 degrees below zero. Two of the oldest of hand tools, the wedge and the ax, are still leading devices in his art. It is true that the crosscut saw has taken over some of the duties of the ax, but, nevertheless, the latter is quite as necessary as it ever was.

There are two methods of felling trees—with the ax alone, or with the ax and crosscut saw. Power-driven machines for felling trees have been invented, but while these are more or less successful in the actual cutting, the trouble lies in transporting them to the spot where the work is to be done, which is often in the midst of heavy underbrush or at great distances over uneven ground, making it difficult, if not impossible, to move a power-driven device.

One of the most interesting operations is always the felling of trees. If a saw is to be used, the first step is to make a wedge-shaped notch with the ax on that side of the tree looking in the direction in which it is desired to have it fall, the lower cut being horizontal and the upper at an angle of 45 degrees. This not only directs the fell of the tree, but also prevents the trunk from splitting.

After the notch has been made, the cutting with the saw is started on the opposite side and a few inches higher. Swaying rhythmically, with sleek muscles rippling under their woolen shirts, two lumberjacks direct the blade.

"Wedge it!" comes the cry from one of them a few minutes later, and a wedge is driven in behind the saw to keep it free from the weight of the tree.

"Z-z-z!" the song of the saw continues.

Then there comes a warning "crack," followed by the shrill cry of:

"Tim-BER!" and the swampers withdraw to safety.

With a shiver, the great tree leans slowly and then falls with a rush, tearing through surrounding branches with a tremendous swish.

When it drops it may crash through the limbs of another tree, leaving one of its own hanging in the latter's branches, from where it is easily dislodged by the wind, imperiling all whose work might take them in its vicinity.

Men with axes leap on the fallen giant and trim away the branches. Others, with cant-hooks, roll it to the skidways, sleds, or cars, where the logs are piled in a high triangular peak. If weight causes the pyramid to break down, the rolling logs will crush anything in their paths.

Besides felling trees, the modern lumberjacks take a hand in building railroads through the forests, as well as cutting paths for the teamsters. "Swampers" clear the roads and the way to the logs as they lie in the woods.
"Hi! Yup!" Echoes the Cry of the Teamsters on Frosty Mornings through Thickets of Birch and Balsam, While the Ring of Axes Makes Merry Music in the Clearing.
Toil is often made a pleasure for laborers of Korea who have tasks lightened and hearts gladdened by the performances of the hired musician, who tempts them to speed with rhythmic throbbs created by his drum and stick.

Paid street bands and organs have long helped to ease the dull monotony of summer days in stifling cities of civilization. As in other countries, wandering minstrels are found in Upper India, offering programs of weird harmony to beguile coins and morsels of food from the people in villages through which they pass. Festooned with jangling bells, the bows, used to coax quaint strains from their crude violins, play dual parts.
From Tom-Toms to Jazz, Music's Magic Lure Is Traced Through Ages

Scientists Follow Its Evolution Before the Dawn of History to Explain Fascination
Rhythm Has Held for the People of All Races Since the Beginning of Time

"It's the voodoo!"

As the words were uttered, the sob of a violin, the cry of a clarinet, and the blare of a saxophone echoed through the great hall—paused an instant—and then, with a crash of cymbals, rushed together into the latest jazz dance.

Rubbing his eyes, the speaker, a scientist recently returned from abroad, gazed about him at the swaying figures, while memory took him back to the mysterious forests surrounding Port au Prince in Haiti where the murmuring night wind brought the sound of a drum, beating like a great, tireless heart.

Sometimes fast, and then again, more slowly, the rhythm rose and fell like the pounding of an invisible pulse. Telling of strange rites being performed by dark shadows flitting about the embers of dying fires—

the dread voodoo from whose shackles civilization has been powerless to free the natives.

Strangely like the jazz music found in the dance halls and centers of culture today—perfect rhythm without much melody—the note of the tom-toms has been traced back to the ages before the dawn of history by scientists seeking to explain the magical lure it has held for the peoples of all races.

First of all musical instruments, the drum is believed to have been the result of early man's effort to imitate the pounding of his own pulses by beating on a hollow log with clubs. In the wilds, however, great gorillas challenge their enemies to combat by standing erect and striking on their chests.

In nearly all primitive lands the drum is to be found in some form. Often it is an empty gourd tapped with a stick or a hollow log, over the ends of which dried skins have been stretched. In Africa, parchment placed over wooden kettles and struck with clubs serve to arouse various tribes. Hollow poles of varying lengths that are hammered with bamboo rods also are used.

With the beat of the drum as the underlying motive, other sounds are produced by wind instruments and by stretching cords of dried skins to poles of various forms. One of the earliest of such devices is a flute made of a bone of a giant elk and found in a prehistoric cave in France.

In the East Indies, musicians perform on crude types of fiddles that give forth soft, droning notes, accompanied by the jangling of bells festooning the rough bow drawn across the strings.
strings. There also is found a sort of banjo, having a fingering board marked with ridges by which various notes and tones are produced, as well as many other instruments.

In Korea, land of the hermits, native laborers are often inspired to greater efforts by the music of a drum beaten by a hired player who stands in their midst as they toil. Chinese celebrations are usually attended by bands equipped with grotesque horns, cymbals, and stringed boxes.

In whatever form it is found, primitive music seems to hold its hearers under hypnotic spells, arousing within them strange responses to its weird harmony. The so-called “jazz” strains lately written into the popular songs of the western world, by many are supposed to have been copied from the jungle orchestras of Africa, where native dances done to the rattle of pot drums and shrill pipes, mark barbaric tribal feasts and councils.

Digging into ruins of ancient cities, scientists have found many queer musical instruments, resembling some of those in use today. The gong was employed by early Romans in their households and to mark time for the feet of marching legions. The lyre, a harp-like instrument, said to have first appeared in old Babylon, later was used by the Greeks to accompany songs and recitations of poets.

While the familiar piano is a development of recent years, its sounding board received its beginning in the earlier forms of the harp which were well known in the hands of ancient peoples. Grind organs now played about the streets of large cities are believed to have found their origin in the hurdy-gurdy, a stringed affair, played by having a small wheel of pins turned against rosined threads.

Not long ago it was discovered that stringed musical devices, believed to have originated in Europe during the middle ages, really came from the lute, an instrument of the Egyptians, made by stretching silken cords across a hollow pear-shaped vessel, and picked with a piece of shell or quill. In Japan and eastern Asia many forms of flutes were known to have existed centuries before Christianity.

South Sea islanders, by inserting rude wooden mouthpieces into the ends of seashells, cause them to give forth sharp sounds that often are heard for miles across the waters, while guitars have been familiar for years to the natives of Hawaii, their softly thumbed notes picturing the languorous lassitude of the tropics. Although many of these instruments are strange to civilization, they all lend sound, harmony, and a means of expression to the people who wrought them.

Aided by every advance of science, the making of modern musical devices has reached a notable degree of perfection. One factory alone turns out 3,500 band instruments of the finest quality every month. These are the result of the combined skill of thousands of workers, long years of laboratory research, and plants filled with ma-

Strange Indian Rites Recall Glory of the Old Frontier Days

Traditions of frontier-days' glory were recalled and the centuries-old rites of a vanishing race were revived at a Navajo Indian ceremony in the West recently.

For a few brief hours the barriers of civilization were swept aside as thousands of moccasined feet beat time to the plaintive chants of the medicine men.

Moving about the smoking camp fires like grotesque shadows, painted braves in feathered headdresses mingled peacefully with a little group of scouts of the Santa Fe trail, companions of "Kit" Carson and Buffalo Bill.

One, limping on crutches under the weight of 90 years, bore the scar of a scalping knife all the way around beneath his long hair, and was pointed out by his companions as Dan Du Bois, the hero of untold frontier adventures.

For what was said to be the first time in history, the Indians had gathered to bless the opening of a white man's dwelling with the same solemn rites attached to the dedication of their own "hogan."

Fifteen medicine men, the high priests, physicians, singers, painters, and dancers of their race, were the leading actors in the services that marked the opening of the structure, a railway hotel.

Old men these priests, with grizzled hair, bent with years, but active in the weird dance. Like the bards of old, they depend upon the memory for details and teach the cult in turn to their followers. Their paintings, many of them made with sand, are said to rank with the best decorative art of any people, and are reminiscent of Assyria and Egypt, of Greece and Japan. Every line is a religious symbol, having a significance.
While scientists have written of these works of art, novelists have woven them into stories, and every student of Indian lore knows more or less about them, few "palefaces" have ever actually beheld them, because they are serious records of the Navajo's religious faith, and the secrets of their design and composition have been carefully preserved.

During the "blessing of the house" ceremony, many of these sand paintings were made.

After the evil spirits had been expelled from the home, there were no references to any evil spirit or thing. Instead, all that is good and beautiful and perfect was invited to take possession of the dwelling and its occupants, leaving no room for the evil spirits to return.

In the opening chant, which is sung during a procession by the medicine men, there is a prayer to the "Unnamed God" — the "one Spirit," of whom the numerous gods of the Navajo are merely various manifestations.

In the sand painting, a field of white is first spread. Then the coloring and drawing are done with marvelous dexterity by spreading colored sands outlined with almost penciled delicacy and great accuracy. One of the traditional requirements is that the painting must be completed between sunrise and sunset. Medicine men, depending entirely on memory, direct the work. As soon as the paintings have served their purpose, they are destroyed. Among members of the tribe no one is allowed to copy the figures.

A person or patient requiring prayers is seated on the sand painting. Part of the ritual consists in destroying the design by rubbing color on the patient. To make the treatment effective, the medicine man must receive some gift for his services in averting evil, curing sick, or petitioning for unusual blessings.

Various ceremonies are used with the sand paintings. When the sand is not practicable, dry paintings are made on buckskins, but the figures are identical. There are hundreds of designs covering nearly every human ill and joy, representing prayer, blessing, faith, hope, and charity, protest, and many other elements.

Authentic copies of the more commonly used were placed in the white man's home, a flattering tribute to the friendship that has developed between the Indian and his neighbors. One called "The Day" is used in the buffalo chant,
a ceremony so old that it has almost faded from the memory of the oldest priests. A chieftain, 110 years old, described this to the visitors.

A throng gathered for the event because it was so unusual for Indians to stage the sacred housewarming for members of another race. Some said that it would never again occur because, though the tribe numbers 32,000, the old medicine men are dying off, and these ancient ceremonies may pass away with them.

At the blessing two old men, who, years ago were engaged for many months in persistent efforts to shoot each other, sat quietly together while they were photographed. They were Du Bois, the last of the frontier scouts, and the oldest living medicine man of the Navajos, Hashkay Yashi, who was war chief of his people in their final outbreak during the Civil War.

Du Bois and Carson rounded up the rebelling Indians and corralled them in a military stockade until the final peace pipe had been smoked. Then the Navajo went to his reservation.

Opening of the white man's home with the picturesque ceremony recalls the curious religious ideas of these Indians. They believe that everything is some person, alive, thinking, and willful. Fish, birds, beasts, and inanimate objects they regard as possessing spirits. To them, all things are of the same nature and are accorded respect and honor in the pictures.

How they call on the spirits through sand paintings to bring better crops is typical. Plots of ground are burned, trees girdled, and seeds planted by pointed sticks. The first year the crop is free from weeds. The second year the yield is small, and the third year it is abandoned after a futile appeal to the spirits by the farmer as he kneels on a sand painting. Instead of using his own resources in properly cultivating the land, he moves to a new field. The Indians believe that spirits bring rich or lean crops according to their whims, when addressed through medicine men and paintings.

Ceremonies on various occasions are held for one purpose—to impress their old friends in the other world, which is the reason the medicine men were so anxious that the white sponsors at the housewarming correctly repeated chants word for word. An imperfect ceremony might give evil a chance to enter.
GRAIN CAVERNS IN OLD FORT USED AS MARKET

Built centuries ago as a storing place for grains during sieges, great caverns still exist beneath the fortifications of Valletta, the capital of Malta. The place where they are located is now used as the city's marketing place. Standing in the central channel that connects the eastern and western basins of the Mediterranean, the island, even before the Romans attained their pinnacle of power, was a much prized possession. For hundreds of years it was the battleground of many races, and, as a matter of course, came the grain pits for protection against famine during war, since the island has always depended upon other countries for grain. Within these wells can be stored an enormous amount of cereal.

Removing Grain from Deep Pits Built Centuries Ago in Courtyard of Fortress to Serve as Warehouses in Times of Famine, but Which are Now Used for Storing Cereals for Market

DREAM OF A RADIO EMPIRE TO LINK WHOLE WORLD

Within a few months, a chain of powerful wireless stations circling the globe is expected to be in operation, enabling a person in London, for instance, to communicate daily with individuals in Peking, China. Necessary licenses have been obtained by Marconi, the famous radio engineer, who has linked London with New York, a distance of 2,920 miles, and is in daily touch with Glace Bay, 1,906 miles away, and Montreal, 2,700 miles distant. The link is being extended to Winnipeg, Edmonton, and Vancouver, thence to Peking (4,630 miles), and Melbourne (7,300 miles). Another route planned is by way of the Azores, Madeira, and Cape Verde to Buenos Aires, and from there to Punta Arenas, near Cape Horn. From Great Britain there is yet another line joining South Africa with Nairobi, proceeding to Madras, Rangoon (Burma), and Hongkong. When the last of the wireless lines is completed, it is said that every portion of the British empire will be able to communicate easily with every other state or colony.

DIAMONDS MADE FROM SUGAR

Lumps of sugar may be converted into diamonds, according to those interested in the experiments, by first separating the carbon from other substances they contain. The gems thus produced are said to be too small for commercial purposes, but will withstand all tests usually applied to detect the real article.
How Ancient Empires Built of Bronze Were Overthrown by Iron Age

DISCOVERIES made by scientists delving in the ruins of ancient Babylon have drawn attention to the little-considered fact that an empire — then a world power — flourished more than 4,000 years ago without iron enough to build a modern battleship.

When the treasures found in the tomb of King Tutankhamen were brought to light, after lying untouched for 300 decades, many articles of bronze were found, recalling the claim by many historians that iron in the form of weapons in the hands of enemies, caused the downfall of the Egyptian civilization.

And yet, 1,000 years before King “Tut” was born, iron was fast coming into use in other, and in some cases, less civilized parts of the world. China and India were employing it for tools and weapons. First it was used in warfare. The rise and expansion of the Assyrian empire came on the crest of the first wave to mark the beginning of the iron age.

Through contact with the Hittites, iron was introduced among the Assyrians, and their armies were the first to be equipped with the metal that proved itself far superior to the bronze and copper weapons employed by enemies and resulted in their utter defeat. That the Egyptians obtained iron from the Hittites is recorded on a clay tablet written about 1250 B.C. by one of the barbarian rulers who mentions that he was about to send a shipment of “pure iron” to Rameses II, who had asked for it, and that in the meantime an iron sword was being sent to the Egyptian king as a gift. While the Hittite civilization was lower than that of the Egyptians, the nation made up for its lack of culture by serving as the world’s ironmonger.

It is a tribute to the labor and skill of the early iron men, that there remain today a few samples of prehistoric weapons and tools. Because of the slow methods of manufacture — the repeated heating and working of the metal — the impurities were removed and an almost pure iron was produced to resist the corrosive influences of the ages.

What is thought to be the oldest piece of wrought iron in existence is a sickle blade found under the base of a sphinx near Karnak, Thebes, Egypt. But none of the metal has been found in any of the tombs of many later dynasties.

With the appearance of the new weapons in the hands of barbarous enemies, the older civilizations melted away like snow before the sun.
PRESSURE ON BULB SPREADS
SHAVING LATHER

By pressing the rubber bulb of a lather-making device, soapy foam for shaving, which it forms, is forced through a flat nozzle, and spread without need of a brush. Made to fit the hand, of light, nonbreakable materials, it may be used in the home or barber shop, or carried by the traveler. Having few parts to gather dirt and germs, it is sanitary and does not require sterilizing. Soap is supplied to it in small tablets.

CLOTH IS MADE MOTH PROOF
WITH ODORLESS LIQUID

Garments of moth-proof cloth are now being manufactured, guaranteed to resist the ravages of the insects during the life of the fabric, as a result of the discovery of a liquid disinfectant that not only kills the pests but destroys their eggs as well. For household use, the chemical is dispensed in bottles equipped with a plunger that works like an atomizer. Stainless, odorless, and nonflammable, it may be applied to the most delicate fabrics without causing injury.

FIFTY THOUSAND PHOTOS A DAY
WORK OF TWO MEN

Doing more work than 50 expert photographers can accomplish, two machines recently imported from Europe make more than 50,000 completed photographs in a day. Blank paper is fed into one end and finished pictures are delivered from the other. Prints are made directly from the negatives and then are developed, washed, and cut into desired shapes. Photos of various sizes can be made at the same time. The machines also can print typed inscriptions on the backs. The devices, each of which can be operated by one person, are used in a dark room so the light cannot reach the highly sensitized paper.

THOUSANDS OF GEESE KILLED
FOR HOTEL'S PILLOWS

In furnishing a modern hotel recently erected, 37 miles of carpet were laid on the floors of the guest rooms and corridors, while 25,000 pounds of horsehair were used to stuff the bed mattresses. To obtain 7,000 pounds of feathers and down for the pillows, 90,000 geese were killed. If this number of living fowls were formed into columns four abreast, the line would be two miles long. Marching in "goose step," at a normal speed, the host would be 3 hours and 41 minutes passing a given point.
INCLUDED in a library of 40,000 books and 4,200 manuscripts recently assembled at a Jewish theological institute and termed the most complete collection of early Jewish literary efforts, is a volume of notes of a physician who practiced about 1400 A.D., listing 1,300 prescriptions popular at that time. Just how much medical science has advanced since then can be determined by the then accepted cure for a scorpion’s bite: "If a man who is riding a donkey is bitten by a scorpion, turns around and faces the donkey’s tail, the pain will leave him and go to the donkey." The author, known only as "Abram," also noted that "Arabic women were used to cleaning their teeth by using the bark of a young nut tree upon which no fruit had been borne. They rubbed their teeth to prevent pain, and to keep them white."

The cure for earache in those days was to "take the fine roots of an olive tree and cook them in water and keep your ear over the steam that issues forth."

Depilatories, however effective, were not unknown, for the book lists the following: "To stop hair from growing: Take the fat of a hare and the marrow of its bones and anoint the shaven place." For safety in traveling, the physician recommended the carrying of the right eyes of 20 geese, a sure protection against robbers. The remedy for sleeping sickness was to place the tooth of a black dog under the sufferer's pillow.

Written in Hebrew and on thin parchment, the notes can hardly be read even with a strong glass. Other volumes, some of them dating back to 640 A.D., are of great worth because of their historical value. Writers of volumes during the inquisition period, at the peril of their lives, set down royal decrees signed by King Ferdinand and Queen Isabella of Spain, and by the Grand Inquisitor of the Ancient Emperors of Austria.

Difficulties of carrying on a conversation in a moving train or in a subway can be eliminated partly if the person being addressed will close his ears with the finger tips. Without pitching his voice above the ordinary tone, the speaker then may be heard plainly, despite the conflicting noises.
PEARLS "PLANTED" IN OYSTERS DETECTED BY LIGHT RAYS

Pearls formed by inserting particles of hard matter into the shells of living oysters can now be detected by holding them before strong light, according to reports of investigators. Those built around a piece of mother-of-pearl are rotated on a string before a window or in the sunlight, when the sheen cast by the core can be plainly seen in certain positions. Another test is to place it over a hole bored in a thin sheet of metal, and held to the light. The shadow of any foreign substance on the inside of the gem will be outlined. Sometimes a small pearl of inferior value is used as the center of one "grown" in the oyster's shell. To recognize these, a gold wire is melted to create a tiny ball at its end, forming a small mirror, which is thrust into the bored hole of the jewel. The reflection of the dividing line between the two materials can then be seen with the aid of a magnifying glass.

CONQUEST OF MOUNT EVEREST SOUGHT WITH OXYGEN

In a new effort to conquer Mt. Everest, British and American explorers have combined, and will employ an oxygen apparatus in an attempt to reach the top of the peak next year, it is announced. The device, which will be depended upon to supply proper air to the climbers, is now being tested in the Alps. The extreme altitudes make breathing difficult.

ADJUSTABLE CHAIR LEGS ADD TO WORKER'S COMFORT

Chairs with adjustable metal legs have been designed to add to comfort and increase efficiency of the worker. Any change in height from an inch to a foot is made possible by sliding the legs and bolting them to the frame. By altering to suit the individual worker, the chairs relieve the strain resulting from being seated too high or too low at a table or desk.

PEAKS OF SPAIN CONQUERED BY ELECTRIC RAILWAY

Steep, forest-covered slopes of the mountains near Madrid, in Spain, can now be reached by electric railway, built along a picturesque right of way. The first train was run over the new road recently. Specially designed, bow trolleys, with which the cars are equipped, hold firmly against the feed wires, while passing at great speed around the sharpest curves.

ELECTRIC XMAS-TREE LIGHTS CLAMP ON THE BOUGHS

Tiny electric lamps that clamp on Christmas-tree branches are being made to eliminate danger of fire. They are made in various colors and are scarcely larger than a match head, giving the light of about a single candle. Only a small amount of current is required to light them, and this is supplied either by a storage battery or from a lighting fixture. As the bulbs last for a long time without burning out, they may be stored away.

In a little more than two years, a tightly sealed bottle floated westward across the whole width of the Pacific Ocean, a distance of 8,400 miles in a direct line from Central America to New Guinea. It is estimated that the bottle would have had to travel 11 miles every day, if it took the shortest route.
"Marvels of Science" Twenty Years Ago

"Sky-Cycle," or Gas Kite. Built in 1902 by Carl E. Meyers on His Balloon Farm at Frankfort, N. Y.

"The Automobile's Successor Is Here," Asserted a Writer in Describing a "New Electrical Vehicle," That Twenty Years Ago had Won "Societies Approving Smile and Pre-sages the Reign of a New Wheeled Favorite."

In Discussing the "Future of the Wireless," Popular Mechanics Printed a Picture of Marconi and Said: "It may Link All the World So Closely That the People will Be Like Those of One City."

Described as First Vehicle Ever Built to Run Either on a Track or Public Highway. This Automobile is Declared to Be Equally at Home in the Boulevards of a City or Mountainous Flights of a Railroad. Seating Seven Persons. It was Designed by W. S. Rogers, Keene, N. H.

Hailed as the "Oddest Hotel in the World" the Construction of a Multi-Sided Hostelry was in Progress at West Baden, Ind. It Had an Oval Interior and was to be Crowned by a Huge Glass Dome.
"Horses are Giving Way to the Tractor and Its Influence is to be Felt Even More in the Future."

"Now the Scorcher will Have No Excuse, for He can Carry It with Him All the Time," Said Popular Mechanics of a Bicycle Canopy That Had Holes for Air and View

"Great Steel Structures on State Street, Chicago," in 1902 Resulted in Arguments as to Whether They should be Allowed Because of Danger of Earthquakes and Corrosion of Steel Frames
HOLLOW LOG IS WIRELESS SET OF WILD JUNGLE TRIBES

Long before the first modern radio set came into being the wild South Ameri-
can tribes that live in dense forests and grass-covered plains near the equator, had "wireless" outfits made from the trunks of hollow trees. For years the jungle and tundra have echoed the booming of these huge drums. By means of code systems, each tribal chieftain keeps in touch with his people, calling his warriors, ordering raids against enemies, warning of marauders, or announcing the approach of strangers. The sound emitted by one of these instruments which, it is said, can be heard for many miles, is like the dull, distant boom of a cannon.

CHARIOT IN FLAMES IS INDIAN LEGEND OF METEORITE

What is a meteorite? Is it a treasure house of diamonds, or is it just a chunk of fused stone? To answer these questions, scientists have been studying for years one of the largest of these celestial visitors, which, they believe, fell during prehistoric times into Cañon Diablo, in Arizona. According to Indian tradition, it was a flaming chariot bearing three gods, who, enveloped in a sheet of flame, extending as far as the eye could reach, rode from the stars to the earth in search of eternal rest. Small diamonds have been found in the mass, together with many metals. The fragment is now infested with rattlesnakes and houses thousands of rabbits, which attract birds and animals of prey.

LEFT-HANDED FOUNTAIN PEN HAS TURNED-UP POINT

To fit the needs of left-handed writers, a fountain pen has been placed on the market with a turned-up point, designed to prevent catching and spluttering. It is furnished in fine, coarse, or medium stroke. As a result of numerous experiments, it has been found that different individuals have varying styles of holding pens and that an instrument which may be suitable for one is not satisfactory to another. Based on these tests, one company has developed nine different styles of points. There is the flexible nib for the stenographer, the medium for correspondence and general work, the fine, stiff point for the bookkeeper, the special fine point for the accountant, and the nib for clerks and salesmen who desire to make manifold copies.
ANCIENT CITY OF DAVID'S SECRETS TO BE DUG UP

Within sight of historical Jerusalem, on a spot believed to mark the location of the ancient City of David, scientists have started excavations with the expectation of unearthing important relics of Biblical times. Whether the tomb of King David, from whom the early metropolis received its name, is located in the area to be explored is a question research has not yet settled. However, even though the sepulcher is not found, the experts are confident of digging up traces of the city's inhabitants. Early historians, although failing to mention the exact place of burial of the long-dead ruler, have recorded two robberies of his grave, one directed by Herod the Great, who had rich furniture, gold, and other articles removed from it.

VEST-POCKET RANGE FINDER AID TO PHOTOGRAPHERS

For amateur photographers, a device has been marketed, small enough to fit in the vest pocket, which correctly gives the distance of any object to be photographed within a few seconds, thus reducing the possibility of bad exposures. Pointed at the subject, the end is pulled outward until the image shows sharp on its "ground" glass. A scale on one side of the instrument indicates the number of feet. It can be used in focusing for any kind of pictures. Price $3.00.

RAY TO OVERCOME GRAVITY IS SOUGHT IN SECRET

Hidden away in laboratories in the heart of Russia, German scientists are engaged in a secret search for a new ray to overcome the law of gravity, according to recent reports. Air experts are quoted as saying that they would not be surprised if this quest has resulted in discoveries which may revolutionize aviation. With abundant money and years of practical experience, the searchers are well equipped to carry on their work.

HOUSES BUILT OF PLATE GLASS AS STRONG AS CONCRETE

Glass houses are declared to have been made possible as the result of the recent discovery of certain chemical processes, together with a glass-making machine. Model House Built of Glass with the Exception of Window and Door Casings

As strong and sturdy as the present residences of stone, concrete, or wood, it is said that homes of opaque glass will be much cheaper and yet will be warm in winter and cool in summer. Plastering, painting, and papering will be made unnecessary by artistic colorings added to the glass during its manufacture. The upkeep expense will be small, for there is no danger of decay from the effects of the weather. Plans call for the erection of five and six-room cottages, which, with the exception of the frame, will be built entirely of glass, in both plate and block form.

GAS-TANK COVER FOR AUTO CANNOT BE LOST

To prevent its loss, an automobile gas-tank cap is being made that is permanently fixed to the car. Once attached, there is no need for removing it, as a spring cover, lined with cork, lifts up to permit filling. A quarter turn of its bar handles fastens or unlocks the lid, which also may be used for radiators.

In an attempt to rid Russia of rats that are threatening the nation's health, the government recently sent a commission to Poland to buy 10,000 cats.
HATCHER FOR CHICKS SPROUTS OATS FOR THEIR FEED

By adding a runway made of a dry-goods box, a chicken hatcher that weighs 14 pounds, can be easily converted into a brooder. The incubator, which has a capacity of sixty eggs, may also be used for sprouting oats for feed, requiring three days in winter and two during summer, to start growth of the grain.

RIVER REVERSES ITS FLOW WHEN SWELLED BY RAIN

So heavy was the rainfall during a recent storm over Chicago, that the Chicago River, normally draining from Lake Michigan through a canal, and thence to the Mississippi River, was reported to have changed its course, and flowed into the lake for nearly an hour. The deluge raised the water level at the locks, almost 40 miles away, until the height there was greater than that at the source. The stream emptied into the lake until 23 years ago, when it was reversed by engineers, so that it would carry away the city's sewage.

INSECT PARASITES TO BATTLE PRICKLY-PEAR PEST

With approximately 40,000,000 acres in Queensland and about 6,000,000 in New South Wales invaded by the prickly-pear pest, cochineal insects have been imported from Ceylon and northern India to check the plague. Various methods have been adopted to control the plant's spread, including its use for cattle fodder and as material for paper-pulp making and alcohol production. For many years bonuses of $20 an acre have been offered by the government to assist in clearing the land.

IRON CHAIR ON WHEELS USED TO PUNISH TRAMPS

Used 25 years ago as punishment for tramps, a queer-looking cage, shaped like a chair and set on wheels, was found recently on a scrap pile in the East. Made of iron straps, it completely inclosed a prisoner, giving him no opportunity to move. A shelf on the front served as a table. Regarded as torture, the practice was stopped.

BERTH FOR POOREST TRAVELER PROVIDED IN JAPAN

Sleeping cars for third-class passengers, said to be the first of their kind in the world, are operated by a railroad in Japan. Overnight travelers, heretofore unable to provide themselves with sleeping quarters at higher rates, are quick to take advantage of the accommodations that offer a clean, comfortable berth to the poorest patron at low cost. Like the ordinary railroad sleeper, the beds are built to fold up into seats for use of daylight travelers.
CAMERA CATCHES TARPON IN BATTLE FOR LIFE

After two months of constant effort, a remarkable photograph of a giant tarpon, the silver king of the deep, valiantly fighting for his life, was obtained. M addened by fear and pain, the huge fish broke water on a taut line, and, enveloped in spray, hurled itself with terrific force high into the air, trying to cast the cruel barb from its mouth. Even to the end, the gasping monster battled vainly to regain its freedom. The picture is regarded as one of the most unusual ever taken of a leaping fish. While the tarpon is prized as food, it is more sought after because of the sport it affords the fisherman. Having seized the baited hook, a struggle begins that taxes skill and tackle to the utmost. The fish, the moment it feels the point of the hook, jumps from the water again and again, and, with gills distended, shakes itself violently. Then is displayed the marvelous strength which this giant of the herring family puts forth in its daily search for the smaller fishes upon which it feeds. Its scales, of beautiful silver tint, as large or larger than a dollar, are often used in making ornaments by residents along the southeastern coast.

SAFETY EGG-HOLDER SAVES FINGER BURNS 83 00

As an addition to kitchen equipment, a lifter has been marketed that safely picks eggs from boiling water without cracking the shells or scalding the cook’s fingers. It is also useful in handling vegetables while cooking, holding them firmly when taking them from steaming pans, and is of especial service in lifting corn-on-the-cob from containers in which it is boiled.

ANCIENT BIBLE IS DUG UP FROM EGYPTIAN TOMB

Excavating in an early Egyptian cemetery, explorers recently discovered what is regarded to be the earliest Egyptian version of the Gospel of St. John, believed to have been written about 400 A.D. Seventy-five papyrus leaves, three-fourths of the complete work, wrapped in a rag, were taken from a pot unearthed in one of the cliff tombs. When translated, the find is expected to shed light on the accepted idea of the Greek text in ancient Egypt. One of the oldest previous records of the gospel dates back to A.D. 200.

Hughes & Beauregard Co.,
467 Hayard St., Boston, Mass.
ENGINEERING problems of no little difficulty have been solved by an electric interurban railroad running between Chicago and Milwaukee in putting into service a new chair car and diner on one of its special express trains. The problem confronting the company was to create cars having all the necessary safety features and comfort of a steam railroad's service, yet so compactly built as to be practicable on its line.

Special framework construction was worked out, after several months' study, which assured safety, for the train travels often at a speed of 75 miles an hour. The diner represents unusually efficient building. In the tiny kitchen no space, however small, has been neglected or remained unused. With a working space only 2½ feet wide and 9 feet long, stoves, utensils, tableware, refrigeration, worktables, sinks, coffee urns, a steam table, clothes lockers, and many other storage spaces have been provided. The little room has been thought out scientifically to permit the cook to have every convenience "right under his hand" when needed. Odd-shaped spaces have been given doors so that they may be used. Notches had to be cut here and there to allow doors to open or slide back and forth.

By clever arrangement, water, both hot and cold, has been piped from place to place—the tanks being on the roof of the car. Many details have been worked out cleverly. For instance, it has been found most practical to make the coffee in the urn with water boiled elsewhere in the kitchen and then kept hot with a patented heating appliance burning alcohol.
FINGER MOISTENER IN PALM OF HAND SPEEDS UP WORK

For convenience and speed in handling papers in such tasks as bookkeeping, machine posting, and feeding printing presses, a finger moistener that fits in the palm of the hand is being marketed. It eliminates reaching to a pad. The fingers are kept damp by touching them against a piece of felt, mounted on a small metal water reservoir, without hampering freedom of movement. As there is little wear on any of the parts, the device will last for a considerable time.

CLAMPS SERVE AS TRIPOD FOR HOLDING CAMERA

To serve the purpose of a tripod, small clamps that attach a camera with a firm grip to a tree trunk, fence, post, table top, or almost any other solid object, are being made in two types. One has felt pads to prevent marring the surface to which it fastens; the other has sharp sawlike edges pressed together by a strong spring. The clamps fit the ordinary tripod hole, and can be carried in the vest pocket.

Graphite, from which lead pencils are made, was first discovered in Siberia in 1842.

"TALKING" LIBRARY OF VOICES TO PRESERVE LANGUAGES

To keep the words of all languages alive, a "talking" library has been established in Germany. Efforts are being made to collect the actual sounds of all languages and dialects of the earth, and to record and reproduce them with the aid of a special type of phonograph. At present, specimens of the languages of 217 nationalities have been recorded for study.

SCARCITY OF WILD ANIMALS SENDS THEIR PRICE UP

Prices paid for wild animals are going up. Post-war conditions have so interfered with the industry of providing wild beasts for circuses and zoos, that few can be bought in the world market. The center of which is Hamburg, Germany. A giraffe brings $5,000; a hippopotamus, $2,500 to $5,000; and good lions are sold at $1,250. To replenish depleted stocks in captivity, hunters are planning a trip to a province in India, where, in previous years, many tigers were obtained. That territory now abounds with lions. Eight shipped there several years ago, have so increased as to become the terror of the country.
Merry-Go-Round and Water Golf Game Devised to Lend Variety to Beach Sports

Both Exercise and Amusement are Provided for Bathers by Great "Medicine" Balls, Tossed About in the Water
Life-Giving Rays of Summer Sun Are Found to Be a Cure for Many Ills

Science Reveals Why People Instinctively Seek the Sunlight; Beams, Invisible to the Eye, Are Stored in Coats of Tan for Making of Red Blood; Solar Energy Contains Power to Operate Devices of Man

WHY do human beings instinctively seek the sunlight?

Because of an instinct as old as mankind, science answers, and turns to the laboratory to study the effect of the sun’s rays on the body.

In a long series of tests made recently in the East, it was found that these beams, many of them invisible to the naked eye, stimulate the production of red blood corpuscles. Two litters of rats were fed upon a diet that was weak in vital elements, one set being kept in a dark place and the other in the sunlight. While the latter thrived, despite the lack in their food, the former contracted diseases, and died.

In the experiments, some of the rats were kept under glass, and much the same thing happened to them as to the ones that had been placed in the dark, which was taken as proof that the direct rays of the sun, in some mysterious way, made up for the deficiency in diet.

Attention was then given to the study of sunburn, to find out its place in the general health of the body. It was found that this layer of bronze not only acts as a protection to the skin, but also absorbs and stores up for future use the life-giving rays in proportion to the lightness or the heaviness of the coat of tan. As a result, it was found by actual count that the red blood corpuscles increased, while the muscles were stimulated and deeper breathing was set up.

Like all other human organs, the sense of sight is limited, the experimenters explained. It is sensitive to only a certain range of light waves in its reactions, waves of greater or shorter length being invisible but producing dull pains in the eyes.

Artificial light is declared to contain a greater amount of these invisible rays than does natural light. As a result, the eye tires more quickly under artificial glares.

And so, in fleeing from crowded tenements, hot offices, and secluded homes, to lakes, fields, and streams each summer, mankind is only obeying an instinct as old as the race, the demand of tired bodies for something essential to their welfare. This also is shown by the experience of a sun school in Switzerland.

Built high up on the Alps, it was first thought that the wonderful results ob-

Summer Skies and Blue Waves Prove an Irresistible Magnet in Pulling Toilers from Work Benches and Desks in All Parts of the Country to the Cool Bathing Beaches.
Crude Rafts in Tropical Wilds and Specially Built Pools in Modern Cities Testify to Mankind's Love for the Water
tained in treating ailing children were due entirely to the effects of the sunlight on germs. But it has also been proved that germs can be killed, or at least rendered inactive, in very cold climates, without helping the patient as much as the sunlight does. The new discoveries are said to show that even more than the germ-killing qualities of the sunlight, is the creation of new vital red blood, which is itself one of the most potent destroyers of germs, and the restoring of chemical balance, without which no body can work properly.

Since earliest days, the sun has been regarded with awe by mankind. Traces of sun worship appear in the oldest records of the human race. They are present in the old theology of Egypt where it was believed that “Ra,” who traveled the upper and lower regions of the universe in his boat, was the sun himself.

Modern Hinduism is full of sun worship and it exists among the Kols tribes, the Khonds, and the Tartars, and is still found among the native races of Central America.

Now scientists are looking to the sun to provide a practically limitless amount of power. Harnessing solar energy, it is pointed out, offers a great field for inventors.

**ICE HAULS NATURE’S FREIGHT WITH WIND AS LOCOMOTIVE**

Although man has covered the world with railroad systems and steamship lines, Mother Nature is the pioneer in transportation service. For ages she has been moving her own products from point to point by many different methods. One of the most unusual of these transfers occurs in the formation of bottom ice which freezes at the bottom of fresh and salt-water bodies. Stones, rocks, and other débris become imbedded in these cakes, which, after a time, move upward toward the surface, often with sufficient force to shoot high into the air.

Then these pieces of ice, sometimes as large as a house, become huge “freighters,” traveling considerable distances with the winds and current. As they melt, the stones and other fragments sink to the bottom again. That parts of sunken ships have been carried many miles in this manner has been proved by deep-sea divers, who have found them literally covered with stones that came from other localities. Near Copenhagen, a block of granite weighing more than 400 tons was lifted from the ocean bed and moved to a place miles distant. In the same neighborhood hurricanes drove far up on the shore sheets of ice that, when melted, left piles of ocean-bed rocks, chains, and parts of sunken vessels.

**SAFETY BATH TUB FOR BABY HAS DRESSING-TABLE TOP**

With a movable cover that acts as a dressing table, a safety bath tub for babies has been invented by a western man. Made of canvas, and hung from a wooden frame, it fits across the ordinary bath tub, so that the child is almost on a level with the top. When the bath is completed, the cover can be used as a table, providing space for clothes and toilet articles. Thus the person bathing the child need not bend over the tub.
VACUUM CLEANER FOR HORSE REPLACES HAND COMB

With a currycomb attached to a vacuum cleaner, members of the fire department of a Middle Western city clean and dress the hair of several horses in the same time as required by hand for one animal. The scrubbing is more thorough, too, it has been found, and requires much less physical effort. The comb can be applied to stationary types of suction cleaners by using a hose long enough to enable the operator to pass around the animal.

EYE SHADES SNAP ON GLASSES TO MELLOW LIGHT GLARE

For workers who perform their tasks under strong lights, eye shades have been devised that snap to the frames of spectacles of any size or style. Attached or detached in an instant, the shades, made of colored transparent material, soften the rays from overhead lighting fixtures, thus lessening the probability of strain, fatigue, or headaches resulting from glares.

FIFTEEN YEARS ADDED TO SPAN OF LIFE IN PAST FIFTY

Figures have been compiled showing that the average length of life for inhabitants of the United States has increased almost 15 years in the past 53. In 1870, the average was 41 years, while now it is almost 56. By 1950, the span will have reached the biblical threescore and ten, provided the present high standards of civilization and correct living are maintained, a scientist has predicted. In the 16th century the ordinary term of life was between 18 and 20 years, and about 1800, it was still less than 25 years. At the end of the 19th century, it ranged between 45 and 48 years.

TRENCH HELMETS IN MINES PROTECT WORKERS' HEADS

Heavy trench shoes and tin hats, that served to stop shrapnel on war-swept fields of France, are being used by many miners in the West as protection against falling ore and rock. Recently a large company was so impressed with the value of these war implements that its officers provided all their miners with them. The safety idea spread. Men who left the mines for war and were there convinced of the worth of the helmets, have induced others to use them.

SPOTLIGHT WITH SIDE RAY FOR NIGHT DRIVING

Not only is the dark road ahead illuminated, but also that at the side of the car, by an automobile spotlight patented recently, having two lights within one shell.
TRUTH IS SOUGHT BY DRUG IN "TWILIGHT SLEEP"

Ever since the time of Diogenes, philosopher of ancient Greece, who is said to have carried a lighted lantern with him night and day in a quest for truth, men have been seeking a means to accurately distinguish between the false and the true, a method that would unerringly judge a person's honesty. Within recent years, science has brought forward inventions to aid in that century-old search. One of the latest that has been called to assist criminologists is scopamin, a drug that produces what is termed "twilight sleep."

For years it was used in a western penal institution as a treatment for drug addicts. The first announcement of its power as a producer of truth from those even unwilling to give exact information came recently, after more than 500 tests are said to have shown its worth. Since then it has been tested publicly on men convicted of crime and serving prison sentences.

As a result of the tests conducted in the prison, it is reported that a convict suffering from loss of memory revealed his correct identity, and another inmate cleared up seven robberies that had puzzled the police. The police department of one western coast city already has adopted the scopamin test as part of its regular method in examining persons suspected of crimes.

One of the men given the twilight-sleep treatment was under indeterminate sentence of ten years to life on conviction of the murder of a Chinese at Sacramento. He was anxious to undergo the test, and, placed in the semiconscious condition, he was asked:

"Did you ever kill a Chinese?"
"His reply came immediately, "I did not."
"Who killed the Chinese?"
"My partner, - - - - - , shot him."
"What did you do?"
"I robbed him and put the money in my overcoat pocket."
"What kind of money?"
"Coin."

It is said that the drug deadens a man's reasoning powers, and his control over the "dress" of words with which he clothes his statements. The subject rationally replies to questioning, but since the conscious mind is under the curb of the administered drug, the imagination is dormant and the replies are statements of facts coming from the subconscious mind, unaltered in the telling by the desire of the speaker.

It is claimed that it is impossible for a person who has been given this twilight sleep in the proper quantity to tell an untruth, to exaggerate the truth, or to evade the truth in any way.

The "lie detector" is another device being used by investigators to aid them in the solution of crimes.

FREAKS OF CLIMATE SHOWN IN WATER-BOTTLE TEST

Through underground observation stations, scientists have recently completed a series of experiments that indicate Mt. Desert Island, a few miles off the coast of Maine, has a higher average temperature and greater evaporation than Long Island, more than 200 miles to the south. The recording instruments consist of thermometers that register maximum and minimum temperatures and specially designed bottles, filled with distilled water and fitted with porous stoppers that protrude above the ground. When the sun strikes them, the liquid is drawn from the glass containers in the same manner that moisture is extracted from the earth. Measurements of the water are taken at intervals and the differences noted give the amount of evaporation. On this island, trees, flowers, and plants that are characteristic of the lands of ice and the more southern climes thrive, while birds of the arctic and the southland make it their common home during the spring and summer months.
TENNIS-NET HOLDER SERVES FOR MANY PURPOSES

Camp and playground are both provided for by a convertible apparatus that may be changed in a few minutes from a support for volley-ball or tennis nets, to a swing for hammocks, or a tent frame. It may also be changed to a turning pole for gymnasium work, or used as a sunshade. For parks and large playgrounds, any number may be set up to meet the demand for various games.

![Convertible Apparatus That can be Easily Changed for Camp Comfort or Playground Pastime](image)

VARIETY IN MENUS GIVEN BY TURN OF A DIAL

Variety in meals is suggested by a turn of the dial on a card recently made to hang in the kitchen. It is designed to relieve cooks of the task of planning well-balanced menus that differ from day to day. Twenty-four kinds of breakfasts, luncheons, and dinners are given a number. A meat is selected and, by turning the dial, side dishes are suggested. There are five kinds of breakfasts and special menus.

BATHER'S HAIR IS KEPT DRY BY GUARD UNDER CAP

To take the place of a tight-fitting diving cap, a water guard, made of rubber, has been patented. It is in two pieces, a heavy rim fitting around the ears and the hollows at the back of the neck so that when the cap, just tight enough to press against the rim, is worn over it, there is no possibility of getting water into the hair or ears. By relieving the head of pressure, it contributes to the comfort of swimmers and bathers.

PAPERS FOR PIPE TOBACCO KEEP THE BOWL CLEAN

To save cleaning a pipe, smokers in Europe wrap tobacco in small pieces of tissue paper. This makes a pellet shaped like a torpedo. After tearing a hole in the base, so smoke will draw through the stem, the tobacco is placed in the pipe bowl and a light applied to the tissue at the top. Packages of circular pieces of tissue were recently placed on the tobacco market in the United States for this purpose.
HOW tall and how large can a building be? Just recently an eastern architect conceived a structure 80 stories high. The Woolworth building, known as the highest commercial structure now, is 58 stories. As to size, the answer seems to be, "As large as practical."

Although fire hazards and other considerations have resulted in limiting the heights of buildings in many cities, architects declare that the general tendency is continually upward.

With 1,237,000 square feet of floor area, the Equitable building in New York is still the largest office building in the United States. The Union Trust company building in Cleveland is second with 1,173,000, and the General Motors building in Detroit, third, with 1,054,685. The Woolworth has 550,000 square feet.

It is a curious fact that the Woolworth building, although not the largest, has the most tenants—almost 14,000. The Equitable has 12,000, the General Motors about 6,000, and the Union Trust will have about the same number. The Equitable building is equipped with 63 elevators, the Woolworth building has 29, and the

General Motors, 27.

Washing the windows of great skyscrapers is a considerable task. The Equitable, for example, has 11,000 panes of glass and but ten men wash them. In the same structure, 90,000 persons use the elevators, 43,000 pieces of mail are received, and 88,000 sent out every day.

In general, the trend in large buildings is toward something restful to the eye as well as strictly utilitarian. An example of this is to be noted in the Chicago Temple building, declared to be one of the most beautiful in the world. Twenty-one stories high, it was constructed by the Chicago Methodist Episcopal Church and Society, and although a downtown office building, houses one of the finest churches in the city.

In the Wrigley building, Chicago has another imposing structure, to which will be added a third when the new building of the Chicago Tribune is completed, the design for which was selected at the conclusion of a $100,000 prize contest among architects.

In New York, an 80-story building has been designed by Bertram Grosvenor Goodhue to house the religious activities of the Protestant denominations.
ROSES ARE MADE FROM GOLD IN COLORS OF NATURE

Fashioned of jewels and beaten gold, a vase of roses in natural colors was recently made for the queen of Spain. To make the flowers and leaves the proper color, various shades of red, yellow, lemon, green, and white gold leaf were used. Working with a metal so malleable that more than 1,000 three-inch squares can be beaten from one ounce, an exact model of blossoming roses and buds on the stem was created. Leaves were given a greenish tint by use of gold leaf about the 150,000th part of an inch in thickness. Alloys of silver and copper were mixed with gold to produce the desired colors and then the metal was melted in a crucible. After this it was cast in an ingot, flattened into long, narrow strips, and beaten with a 17-pound hammer for 20 minutes. Then it was cut into sections and put between ox skins of a “shoder,” where it was pounded again. Artists of a family that for generations has been skilled in this ancient craft spent months in perfecting the queen’s gift.

BUG IS SOUGHT IN THE ORIENT TO KILL PLANT BEETLE

In an attempt to stamp out the Japanese beetle, a beautiful copper-colored insect that has infected plant life over an area of almost 1,000 square miles in two eastern states since 1916, when it was accidentally introduced into this country, scientists have been sent to China, Japan, Korea, and Hawaii to find a bug that may prey upon it and eventually wipe it out. Unrestrained by attacks of parasites that feed upon it in its native home, where it is called the bean beetle, the insect has multiplied rapidly despite strenuous efforts to exterminate it. Its ravages have become so destructive that the federal government and the states of New Jersey and Pennsylvania have been forced to quarantine a number of farms in an endeavor to check it. Despite the invention of death-dealing sprays, the march of the pest every year increases about five square miles on each side. The first specimen migrated to the United States on the roots of azaleas imported from Japan.

SERUM HAILED AS ABSOLUTE PREVENTIVE OF MEASLES

After years of search, a preventive of measles is said to have been found recently by French scientists. Although experimental work still continues, it is said that the results already obtained will
be of great value in stamping out epidemics. In tests at the Pasteur Institute in Paris, France, in 1911, a small amount of serum was taken from a person afflicted with the illness and injected into a healthy individual to produce immunity. Subsequent trials are declared to have brought out the fact that by following the initial vaccination with a secondary one, consisting of a small quantity of blood from a person suffering from the contagion, and repeated several times at intervals of a month, complete immunization would occur.

RED MIRROR ON AUTO SERVES AS WARNING TAIL LIGHT

With a lens and a conical-shaped reflector of spun glass placed on the rear license plate of an auto, rays of the headlight of a car at the rear are picked up and cast back in a red glow. There are no wires, battery, globes, or oil lamps that might fail. With a metal nameplate around the lens, some types are being made to carry an advertising message. The principle is the same as that of some

OIL STOVE LIKE PHONOGRAPH

Both Heats and Cooks

An oil stove that looks like a cabinet phonograph, with mahogany or oak finish to the metal, is made for heating and cooking. Opening the top doors reveals not a sound box but the plate for boiling and frying. The heat that warms the room does the cooking. There is no costly motor, the flame being made on a small burner. Absence of coal dust, ashes, dirt, or bother about renewing fuel are features that are aimed to attract women users of the stove. One filling will last for several hours, it is said.

FIRE IN FORBIDDEN CITY RAZES SON OF HEAVEN'S PALACES

Mystery surrounds the fire that recently destroyed several of the beautiful and historic buildings of the Forbidden City at Peking, the "Holy of Holies" of the Celestial Empire and the proudest product of Chinese genius and culture. In its exquisite gardens, its delicate halls filled by the piety and industry of 300,000,000 subjects with the noblest art of a great civilization, lived the Son of Heaven, the emperor. The very names of the buildings he inhabited are poems. "Palace of Earthly Bliss," "Throne Room of Perfect Peace," "Palace of Cloudless Heaven"—such were the designations of the wonderful structures within its walls. While a disinherited Son of Heaven still lives in these fairylike surroundings, his power has vanished, apparently beyond recall.
Deluge of Paper Money Leaves Trail of Ruin, Famine and Death in Europe

Beggars Are Turned into Millionaires and Princes into Paupers in a Day, while Poor Lack Even the Necessities of Life

UNDERMINING the very foundations of once powerful nations, turning beggars into millionaires and princes into paupers while the children of the poor cry for the bare necessities of life, the flood of cheap paper money continues to rise in Europe.

Like a ghost city, with its population diminished and its glories departed, once merry Petrograd stands as a symbol of the tragedy that has engulfed so many former centers of civilization in the past few years. Even the main roadways, like the Nevsky Prospect, seem to be caving in.

Stranded vessels rot at their docks along the quays. Long thoroughfares present grim pictures of desolation such as can be furnished only by empty, fallen, and stripped houses. Among the tarnished splendors of the Winter Palace and the Tarskoye-Selo, sit bearded bolshevik officials.

In Moscow, now the seat of the government, there is more activity, but here, too, are found strange contrasts. Within the shadow of the walls of the Kremlin, a relative of the late czar is found driving a street car. Nearby is a former general in the tattered remnants of a uniform, selling newspapers.

Along the Unter den Linden in Berlin, and the Ring Strasse in Vienna, similar incidents are to be observed as the poorly nourished inhabitants struggle to obtain the barest necessities of life. Small apricots sell at 60 cents each. At the dairy, a quart of milk commands a price that would have purchased three first-class coats before the war. Next door the baker, smilingly asks as much for a loaf of bread as would have bought a richly furnished automobile in the old days. The bottle of beer, that the innkeeper places before the tourist, has the same value as a truckload of it a decade ago.

German post offices will not accept a piece of mail until at least 500 marks in stamps have been attached to it. Asking a genial stranger for a match is equivalent to seeking the gift of the hundredth part of a wagonload of good wood, as the box of matches now costs as much as the wood would have brought in former times. Money is so plentiful and so easily produced that its value has almost vanished.

In the Balkan countries and farther east, similar conditions prevail. Almost all of Europe is overburdened with floods of paper currency. Germany alone has 41 plants working 24 hours a day and turning out 17,563,819,142 marks' worth of notes every hour.

During July the total paper currency circulating in that country was 20,241,782,-966,000 marks. In addition there was 21,-200,000,000 marks in aluminum coinage. At that time it was officially stated that no note under the face value of 1,000 marks will be printed in the future, as it costs more than the note itself actually is worth to print any of the smaller denominations.

One curious collector is said to be paying from five to ten times the face value of certain old 100-mark and 1,000-mark notes, declaring that those printed from copper plates are the only ones acceptable abroad, as the later ones, printed from type, are refused because they are too easily counterfeited. This is discredited in some quarters on the belief that the counterfeiters would lose money by producing false notes of such low denominations. In July for a single American dollar, the tourist received nearly 1,000,-000 marks that formerly were worth more than 20 cents each.

In general, this flood of money has increased wages to amounts that would
Even the Postal Systems of Central Europe Feel the Downward Slide of Money Values. Ten Years Ago a Carload of Express Matter could be Carried for Less than the Postage Charge Now Required for an Ordinary Letter. Also, Only a Handful of Potatoes can be Purchased for the Price Paid the Pre-War Merchant for a Wagon-load.
have represented comfortable fortunes a few years ago, but the burden has fallen heaviest on those dependent upon incomes from investments made before the value of the money reached the vanishing point.

Those who borrowed funds, in other days, now find it easy to pay their debts, but the creditors receive practically nothing. Less than a decade ago, the family or man with an income of 25,000 marks a year was considered wealthy. Today this sum would not buy a good meal.

In Russia the whir of the printing presses has almost ceased. Replacing the almost worthless paper rubles, there is a new gold-guaranteed currency. In July the new 10-ruble notes fetched more in both Russia and abroad than the English pound sterling. A 10-ruble gold note is worth just 825.000 paper rubles in Moscow, and the pound sterling is worth 815,000 paper rubles.

Austria has gone through a somewhat similar regeneration as the result of financial assistance given by other nations, but in some of the other countries little or no improvement has been shown.

Meanwhile, it is estimated that approximately 2,000,000 members of the former Russian aristocracy have fled to foreign lands. Stripped of their possessions, they are to be found in scattered groups in Constantinople, Paris, London and New York.

One of the largest bodies of these exiles is said to have been aboard a strange squadron which the Russian Admiral Stark led into Manila harbor early this year. From there they journeyed westward in an effort to eke out a scanty livelihood.

In Paris lives the Grand Duke Dimitri, first cousin of the late czar and one of those accused of having slain the monk, Rasputin. In some circles he is recognized as the hope of Russian imperialism. After the collapse of the imperial army, he wandered about Europe for some time, finally arriving in France with less than 100 francs in his pocket.

With his brother-in-law, Prince Poutiatine, and the latter's wife, the Grand Duchess Marie Pavlovna, he started a little embroidery factory in a modest house in the section of Paris in which servants dwell. The princess, sixty-five years old, sad-eyed, tired and thin, acts as forewoman and saleswoman of the establishment.

Bent over a dozen embroidery machines, their eyes hardly ever leaving their work, may be seen a dozen members of the Russian nobility, glad to work for a wage of 2 francs an hour. Eight hours of this labor was worth about $1.50—just enough to keep the young woman in a widow's veil, the Countess Apracisine, from starvation.

In a Paris dressmaking establishment over the door of which appears the single word, "Yteb," is the Baroness Wranget, sister-in-law of the General Wranget, who failed in his campaign against the bolshevik army. In another is the Princess Kougoucheff who, through her courage and devotion, saved her mother, her old governess, and her two young children during the dark days of the revolution.

Brought up in luxury with no idea of ever working for a living, the lot of these refugees has been hard.

For the middle classes, physicians, lawyers, doctors, college professors and others living on fixed salaries and incomes, who were unable to flee from their countries, conditions have been almost equally trying, as the decrease in the purchasing power of their money often reduced them to a condition of actual want. Sometimes they entered the service of their governments without hope of pay.

On the other hand, the wages of skilled laborers generally have kept pace with the increasing cost of necessities and the farmers, except in times of famine, have been able to provide for their own wants,
PAST AND PRESENT VALUES CONTRASTED IN EUROPE

When Money Figures are Considered, Buying a Bottle of Beer in Germany Is Equal to the Purchase of a Pre-War Truckload

Matches Cost More than a Load of Wood Did

Today's Pitcher of Milk Bought Three Head of Cattle Before Cheap Money Came

Prior to the Decline of Currency in Europe, the Cheap Rye Loaf Was Peasants' Fare. Its Present Price would have Bought an Automobile in Those Days.
FISHES SWIM IN GLASS TUBE JOINING BOWLS

As a novelty in aquariums, a middle-western inventor has joined two fish bowls with a two-inch glass tube shaped like the letter "U." Fish swim from one jar to the other through this tube, which is filled with water before the bowls are connected. As many bowls as desired may be joined in this way. For his home the inventor has connected ten, making a unique display. Moss and other plants placed in the jars make the setting realistic. On the bottoms are models of turtles and frogs. Around these and up through the tubes the fish swim, their bright colors creating pleasing contrasts. A person's hand thrust into a bowl, forces the water to move through the tubes. Some of the goldfish have learned to remain motionless when this is done and seem to enjoy the ride as they are carried along in the current. Metal clamps resting on the jar tops, support the tubes. For refilling, a rubber cap is put on one end of the tube and water is poured into the other end. When full, both ends are closed, the tube is set in the bowls, and the caps taken off.

JUNK HEAP FOR OLD "DOLPHIN" MAKER OF NAVAL HISTORY

Sold for junk, the historic "Dolphin," pioneer of the present United States Navy and once the first ship of the famed White Squadron, has passed into oblivion after a long and proud career under the Stars and Stripes. The launching of the "Dolphin," more than 30 years ago, marked the beginning of the growth of American sea power. Built as a "steam cruising vessel" and fitted with American armor plate instead of the European product that had been used exclusively prior to that time, the craft was greeted by a storm of ridicule that found an echo even in Europe. Rear Admiral Meade, then a commander, termed it "a marine crazy quilt, with not enough strength to attack an enemy, and not enough speed to run from one." The government at first rejected it, but later relented and consented to a trial trip. Commander Meade was ordered to try it. He headed into the "Atlantic Port of Storms" and waited for a hurricane. It came, and the old "Dolphin," although it rolled, tossed, and stood on its beam ends, came through with colors flying. At the outbreak of the Spanish-American War, it was ordered into active service, and throughout the hostilities performed blockade duty along the Cuban coast. When trouble with Mexico threatened in 1913, it was sent to Vera Cruz and then to Tampico, where it became a center of storm when a party of its sailors were arrested by Mexican authorities. Almost the oldest ship in the navy, the coming of the World War saw it again in active duty, overhauling and examining outward-bound and incoming steamers. In 1916, it performed its last conspicuous service, carrying Secretary of Navy Daniels and his party when they reviewed the Atlantic fleet. After 37 years of continuous service, the "Dolphin" was put out of commission in 1921. Later it was sold, and now has been towed to its last harbor—the junk heap.
SIR WALTER RALEIGH'S FIRST PIPE SHOWN IN LONDON

Sir Walter Raleigh's first pipe, with which he is believed to have introduced tobacco smoking in England, has recently been found in London. Made by American Indians, and decorated with carved heads of people and animals, it is said that he smoked it on the eve of his execution. In the three centuries that have elapsed since, the spread of the habit has covered the civilized world. In the United States, a million and a half acres of land are given over yearly to cultivation of many varieties of the plant, producing a crop which occupies a leading place in the country's agricultural output. Government reports show the annual tobacco yield to be far above a billion pounds, with a value of over $250,000,000. While the industry gives employment to more than 158,000 people in this country, the manufacture of pipes and smokers' articles requires many thousands of workers to supply the demand for them that exists wherever tobacco is used.

ICE MACHINE SMALL ENOUGH TO CARRY IN HANDS

So small that it may be carried easily, an ice-making machine that is operated by an electric motor has been invented in Germany. Frigid air is produced by the alternate evaporation and condensation of a chemical contained in the upper part of the device. Since all the seams are tightly sealed, there practically is no loss of the chemicals. In the bottom are pans that may be filled with pure water or ice-cream mixtures. Within a short time the contents are turned into ice or ice cream.

TRACE OF LOST RACE IS FOUND ON ISLANDS OF PACIFIC

What may be remnants of a civilization that existed 2,000 or more years ago have been found by explorers on the small islands of Niihoa and Niihoa, part of the Hawaiian group now set apart as a bird reservation. For centuries past, it is believed that those isolated spots have sheltered the secrets of once powerful colonies that may have flourished hundreds of years ago, prior to the Polynesian migration which resulted in the settlement of the Hawaiian chain. In the parts of temples, houses, and traces of system of agriculture, which have resisted the fury of the elements for an unknown period, the experts believe may be found the solution to the mystery surrounding the origin and travels of the ancient Polynesian tribes. The scientists brought back with them bowls hewed from solid rock, a headless idol, and other relics, and told of ruins they regard as evidence that the two islands were the homes of peoples skilled in navigation thousands of years ago.

Ice-Making Machine Easily Carried, That Makes Own Ice and Freezes Cream

For the dog living in an apartment, costly baskets are being made in color designs to match the decorations. These sleeping cribs are furnished with mattresses and covers.
CAKE IS MIXED BY MOTOR QUICKER THAN BY HAND

To make mixing a cake easy, an attachment has been invented to be run by a household electric motor, such as are used to operate sewing machines. The device stirs the dough just as thoroughly as if done by hand, and in a fraction of the time. Quickly adjusted, it may be set up on the bread board, kitchen table, or cabinet within any bowl deep enough to hold the ingredients.

ELECTRIC CELL RIVALS EYE’S SENSITIVENESS TO LIGHT

So sensitive that rays from the flame of a match held 4 feet away will affect it, an electric cell, undergoing a series of tests by eastern experts, can be operated by having beams of light thrown upon it. In appearance, it resembles an ordinary electric-light bulb, except that its inner surface is coated with a silver-colored chemical that offers less resistance to the flow of electricity as the amount of light showing upon it is increased. When light rays strike this delicate substance, they cause the cell to open an electric circuit that carries current to four large lamps. With the aid of this cell it is believed that daylight and darkness can be used to do the work of men in starting and stopping machinery, operating powerful beacon lights in lighthouses, and for setting off alarms.

It could be made to turn street-lighting systems on and off, and control the flow of water in reservoirs. Weather experts would be helped in recording the number and length of sunny days, or cloudy periods for different places, while the cell could be made to show the presence of storm clouds in the skies between distant points for the purpose of tiging their speeds of travel.

FORTY-MILE RIVER DAMMED TO PREVENT FLOODS

After seven years of building, a dam that stops a 40-mile river in South Africa was recently completed. A barrage type was chosen to prevent collecting of mud and earth in the reservoir and to avoid flooding of private property on the river banks. In the average year enough dirt is carried down this river to cover 720 acres a depth of 6 inches. Passing through tanks and filters and being treated with chemicals clears the water. Thirty-six sluice gates control the huge barrage, 1,400 feet long. When full, the depth of the water will be 25 feet. At the formal opening a British prince officiated.

VANISHING CHAIR FOR BABIES FOLDS UNDERNEATH TABLE

Folding up and sliding on a rod beneath the table top when not in use, a baby chair has been designed to meet the needs of small rooms and apartments. At mealtime it can be drawn out from its place and opened up for the occupant, making an extra chair unnecessary. It can be attached to any dining table without taking up space usually occupied by larger persons on ordinary chairs.
MATCHES USED FOR MONEY
WHERE COPPER IS RARE

Where copper coins are scarce in some parts of Manchuria, matches and postage stamps are used for small purchases. In one city, a bank has granted loans of $200 to $500 worth of coppers to each of 500 small shops. They are worth about 160 to the American dollar.

GRAFTING COTTON TO TREE
MAKES CROPS RICHER

Grafting a single cotton plant to the root of a mulberry tree has produced 900 bolls, or pods, where formerly 40 was a good crop. The process, an invention of a southern plant breeder, is being widely watched because of the possibilities it offers in reducing the cost of cotton. Some of these grafted plants are nearly 8 feet tall and have well-developed fibers, called staples. The production rate is greatly increased, three mother plants giving about 60 pounds of seed cotton, or four bales per acre.

FLAME THROWER TO FIGHT
GRASSHOPPERS IN WEST

To combat plagues of grasshoppers, a flame thrower has been devised in the West. By means of an air compressor, gasoline and air are projected through a long rubber hose, lighted at the nozzle and the blaze sprayed over the ground, killing the grasshoppers instantly. The insects usually travel in ranks with a front from 100 yards to one quarter of a mile and with a depth of perhaps 50 to 100 feet. When bunched in that manner, the instrument has been found effective.

KITCHEN IS RUN FOR GERMS
BY GOVERNMENT EXPERTS

In a kitchen where test tubes, flasks, funnels, and jars replace pots and pans, where stoves are single-flame gas burners, where the cookbook is a scientific journal, government experts prepare food for millions of germs used in research work to determine the causes of plant diseases. For this large family, the most precise care must be taken by the chefs, as each group of the germs demands a different dish, specially treated. While the kitchen contains some foodstuffs that do not differ greatly from those cooked by the housewife, it resembles more the workshop of a chemist, with its rows of small glass containers and instruments.

Tubes of cornmeal mixture correspond to the potatoes and other vegetables. Every day almost 6 pounds of beef are turned into an extract by a most intricate process to please the taste of the germs. Instead of by the spoon, the food is measured by drops, and every step taken is carefully recorded for future reference.

Even dishwashing is a task that demands very careful attention. Empty tubes are first immersed in acid to cut away the particles of food that may cling to the sides, then comes an alcohol bath, a rinsing in distilled water, and finally a baking for an hour and a half in an oven heated to 150 degrees centigrade, nearly 240 degrees Fahrenheit. More than 40,000 test tubes are in constant use.

It takes 61 days' work a year to pay the taxes of every producer in the United States, it is estimated. In 1921, taxes consumed 16.7% of all value produced in this country.
Accustomed to the Movements of Their Human Protector, Buck and Doe Await Daily Portions of Fodder.

Born on the Island, Fawns Grow Up to Regard It as Their Haven of Peace and Plenty.

Board Tables Laden with Bowls of Feed are Frequently Visited by Arrivals from the Mainland.
WILD DEER FRIENDS OF EXILE ON LONELY ISLAND

Living alone on a tiny island on the British Columbia coast, a wilderness dweller, fond of animals, has succeeded in winning the friendship of a herd of wild deer.

In doing this, he first laid out corn-stalks on the paths near his house. Gradually one deer came to accept him as a friend. In a few weeks' time this animal brought another. By the end of a year the two had persuaded five more that here at least was one of the many beings who could be trusted. The seven soon got quite tame and would come up to the man.

Near the little island is a larger one, which, in turn, is close to the mainland. That animals can communicate with each other is evident, for by the middle of the second year the number of the deer on the island had increased to thirty. The only explanation of this is that the first to make friends must have passed on the word to other wild ones.

Finally, the man decided to build a table with bowls for his visitors. The deer kept increasing, however, in such numbers that he had to build several others, and thus came into existence the first and only "wild-deer restaurant" in the world.

Today, six years after beginning the experiment, there are hundreds of deer upon his island. They come and go as they please, as they have the whole of British Columbia to roam in. But the deer now recognize the place as a sanctuary, and here the little fawns are born in great numbers.

Some of the deer, not satisfied with the food at the tables alone, come to the house and knock on the door with their heads and horns, or rattle the door knob with their teeth, in this way begging for extra delicacies.

In the springtime the front yard is an interesting sight, for nearly always there are a number of deer hanging around, or a few fawns playing about, or sleeping on the doorstep.

INDIANS, BEASTS OF BURDEN, CHEAPER THAN TRUCKS

Because labor is so cheap, Indians in Bolivia, South America, are beasts of burden, trudging along with huge loads at less cost than motor trucks. There are few cars even in the capital, where tiny burros and queer-looking llamas with packs pass up and down the streets, guided by natives, also heavily laden. In this city, founded almost 400 years ago by Spaniards, labor-saving ideas are almost unknown. In digging for a store in the capital, recently, Indian men and women carried away all the dirt in small baskets on their backs.

HOTTEST FLAME KNOWN TO AID IN STUDY OF PLANETS

What is declared to be the hottest flame known to man has been produced by artificial means in experiments held to study the form of atoms. An electric blast, lasting for only a small part of a second, occurring on a charged wire, seemed to explode, creating heat so intense that it could not be measured, although estimates put it at 30,000 to 80,000 degrees. Pictures taken as the explosions occur are expected to aid astronomers in solving the causes for different kinds of light thrown off by many of the planets.
PLANE IS PROPELLED BY FEET IN SEVEN-YARD FLIGHT

Propelling an airplane with his feet, an inventor at a middle-western field recently flew almost 7 yards. He rose 3 inches from the ground. The flight was said to be the first of any craft moved by foot power. The plane, which is constructed of light materials, was not made for sky trips, but merely to prove that it is possible to fly by pedal power alone, the engineer said.

SUGAR ALCOHOL RUNS ENGINES ON HAWAIIAN PLANTATIONS

Molasses, a waste by-product of the sugar industry in Hawaii, sometimes used as fertilizer and stock feed, is being turned into alcohol to run machinery, automobiles, and tractors on Hawaiian plantations. As a fuel for heating purposes, it is said to leave no sooty deposit, burning with a clear flame, and easily affected by water in case of accidental fire. Most of this sugar alcohol is produced by the plantations in their own distilleries, one of which furnishes enough to run its 32 trucks, 20 passenger cars, and two tractors, aside from supplying the kitchen stoves of hundreds of field laborers. Sugar being the chief crop, gasoline shortage holds no terrors for automobile owners on the islands, as they are not only able to supply all local needs for fuel alcohol, but can make a surplus for exporting. Ether can also be manufactured from the molasses.

VEST-POCKET PHONOGRAPH IS BUILT LIKE WATCH

No larger than an ordinary watch, a gramophone has been invented by a Hungarian engineer that is said to be capable of producing jazz, waltzes, and one-steps. The instrument is wound like a timepiece and fits conveniently in a waistcoat pocket. An inside compartment holds 10 pills that may be played on both sides. In England a midget machine that is only 6 inches high and weighs 4 pounds is being marketed. It has a collapsible horn, takes full-size records, and folds together like a camera.

SCORER FOR CARD GAME AIDS IN AVOIDING MISTAKES

With a device for scoring card games that recently has been invented, there is less chance of making an error in figuring the standing of the players. Made to rest upon the table, the progress of the game can be determined from it at a glance. Although especially intended for auction bridge, it may be used for registering points in other games. Two lines crossing the board at right angles divide it into "we" and "they" sides, the part above

AUTO FOR EVERY NINE PERSONS

Registration of trucks and automobiles as reported recently indicates that there are now more than 13,048,128 motor vehicles in the United States, an average of one machine for every 8.5 persons. Between July 1, 1922, and July 1, 1923, there was a gain of 2,440,000, almost 23 per cent.
LONGEST ROUTE IS CHEAPEST VIA PANAMA CANAL

Although the longest way may not be the quickest, it has often proved the cheapest since the building of the Panama Canal. Recently a vessel sailed 5,770 miles via the canal to deliver a shipment from one city in South America to another only 650 miles away by air line. Despite the length of the voyage, the charges were less than they would have been if the merchandise had been transported directly overland, because of the almost impassable jungles separating the two points. In another instance it was found less costly to ship lumber more than 8,000 miles by steamer through the canal than to send it to the same destination 2,500 miles by railway. The trip from the west coast, through the canal, up the east coast, and to a middle-western city by rivers and lakes, took more than two months. It has even been found cheaper to send products 1,000 miles by rail to the east and thence by boat through the canal to the west coast, a total distance of approximately 7,000 miles, than to ship them 2,500 miles overland.

MODEL SHIP IS CUT FROM LOG WITH A JACKKNIFE

With a jackknife as his only tool, a mechanic has carved from a single log of cedar, a model of the United States Oriental liner, "President Grant." Although it is built on a small scale, every detail down to the rows of portholes and ventilator shafts, is correctly reproduced. It took thirteen months of whittling to complete the miniature.

TRUE PIANO TONES BROADCAST BY IMPROVED MICROPHONE

Radio transmission of exact qualities of piano music is said to have been made possible by means of a microphone recently developed and now being used in one of the large wireless stations in the East. The device consists of a magnetic system with a coil. The magnet is firmly attached to the frame of the piano while the coil is fixed to the sounding board. In this manner, the tones are correctly converted into electric waves.

Putting Finishing Touches on Model Ship Whittled with Jackknife from Block of Wood

COLD GREATER THAN ARCTIC'S TURNS OUT HELIUM GAS

Cold, many times lower than any temperature found existing naturally on the face of the earth, is used in making helium for the government's balloons and dirigibles. By a secret process, natural gas subjected to tremendous pressure, turns to liquid at 317 degrees below zero, and the helium is drawn off. To change nitrogen gas into a solid would require a temperature of 353 degrees below zero. A piece of raw meat subjected to such freezing would shatter to bits, if dropped on a hard floor, while a pencil would burst into splinters.

QUICK-CHANGE SCREW DRIVER HAS BLADES IN HANDLE

For use in the shop or home, a screw driver is being made that has three different blades in its handle. Any one desired may be set in working position when the tool is tipped up. A turn of the handle locks it in place. By reversing the operation, the blades are retracted.

Our Bureau of Information will answer all questions regarding articles appearing in this magazine.
FOLDING BED PROJECTS OUT OF THE WINDOW

For outdoor sleepers, a screened bed that can be suspended out of a window and held safely in position by heavy chains, has been invented. When not in use, it rolls back over a metal frame equipped with casters that permit it to be moved with ease to any part of the room. In the house the bed can be used as a davenport, or it can be detached from the frame, folded up, and carried with a camping outfit, short legs being provided to support it.

AERIAL TORPEDO IS CALLED BLOODHOUND OF THE SKY

Because it actually trails the sound of an airplane motor and explodes on reaching the craft, a torpedo recently invented is called “the bloodhound of the sky.” Shaped like those fired from vessels, it is driven by liquid air. The operator, locating the noise of an airplane’s engine by radio, launches the torpedo by pulling a trigger to release the turbine in the missile. With a roaring swish it takes to the air, pointing upward at first, and then turning straight toward the target. When the device strikes, an explosion of terrific force results. During a test one tuned to a motorcycle engine demolished the machine.

MOUNTED "DUMMY BOY" KEEPS RAILWAY TRACKS CLEAR

Flagmen, mounted on horses, still ride ahead of trains on Tenth Avenue in New York to warn walkers and automobile drivers of the approach of locomotives. When required, they halt a train at a crossing by stationing themselves in front of the engine. In these days of electric-signal systems and other similar inventions, people stop and look when a rider, known as a “dummy boy,” passes down the track. This system of signaling, which was employed to announce the approach of the first steam train, passed out of general use about 100 years ago.

FOLDING JELLY-BAG STRAINER SAVES MANY STEPS

Fashioned from wire so that it will fold, a jelly-bag strainer being marketed rests on any flat surface, and may be placed near the stove within easy reach of the cook, thus eliminating many steps. As all parts are accessible, it can be quickly cleaned. The bag may be replaced when worn, making the device serviceable through several canning seasons. While in use, the receptacle is kept from tipping by a wide base.

Before mummies came to be regarded as objects of value for museums, many were pulverized and turned into a brown paint.
More than a Million Loaves for Every One that Grandmother Used to Make

How Science of Baking Bread Has Progressed Since Days of the Log Cabin, Lifting Burden of Toil from Women

FROM the log cabin, with its great, open fireplace, to the modern steam-heated, electrically lighted apartment seems a long journey, but it was made in much less than 100 years.

Until 15 years ago, bread was baked by hand in a way that had been passed down from pre-historic days in almost unchanged form. At that time, with few exceptions, none of the machines now used in the baking industry had been invented.

That is why bakers themselves like to call their industry “The newest-born babe of Mrs. Machinery.” In one middle-western city alone, they make approximately 9,000,000 pounds of bread and rolls weekly, supplying more than 60 per cent of the total amount consumed.

For every loaf that mother used to make, great machines now turn out a million, and, according to food experts, the product is more uniform and better in every way.

When thin lines of pioneers from the New England states first turned their creaking, ox-drawn wagons toward the forests that covered all of the territory west of the Appalachian Mountains, bread-making was an art involving almost endless toil.

All of the cooking for the families, which usually were large, was done over open fireplaces, servants were unknown, and the housewife not only prepared the food, but carded the wool and wove all of the clothes used in her household. The usual workday began with dawn and ended with darkness, which found the fire banked and all of the household in bed.

Pioneers still living tell of having been forced to walk miles through snowdrifts to the nearest neighbor for live coals to rekindle a fire that had gone out during the night. Matches, of course, were unknown, and steel and flint were rare. Once lighted, the fire on the hearth was constantly watched, as it often spelled tragedy for the settlers when allowed to die out. Such a thing as an 8-hour day was unknown for anyone, the men toiling as long as there was light, while the women molded candles and musket balls for hunting, and worked in their gardens, after their other tasks were finished.

Meat was cooked on spits turned before the open fire, and vegetables stewed in pots swung over it. Bread was baked in pans placed in the glowing coals or in ovens built into the sides of the fireplaces, and flour was usually ground from wheat on crude hand mills, as it was needed.

Today large wholesale baking plants supply entire cities, their forces of white-capped workmen beginning in the early evening and working through the night so that their product can be delivered fresh for the breakfast tables by fleets of motor trucks.

In the development of great bakeries, some of which do the work formerly performed by 200,000 women in the homes, research laboratories have been established to reveal the secrets of transformation in the baking process. Here chemists grow colonies of yeast germs and seek cures for all the troubles to which flour and bread are prey.

Machines used in the industry do away with handwork almost entirely. They mix the dough automatically, send it
Finshed Loaves Coming Down from Ovens on Automatic Con-
veyors to be Stored in Steel Racks for Cooling before They
are Wrapped

One Section of the Baking Room Which is Equipped with Long Rows of White-Tiled Ovens

Dough Divider and Rounder Which Cuts the Mass into Chunks and Shapes Them: Scales Test the Accuracy of the Machine
This is the kitchen in the home of John Howard Payne, who wrote "Home Sweet Home," 100 years ago—a typical one in great-grandmother's time.

Representative of the conveniences science has put at the disposal of women, this kitchen cabinet provides a place for everything.
spinning along through loaf cutters, rounders, and proofers, and carry it through traveling ovens where the loaves ride until thoroughly baked, and when cooled are shunted through automatic wrappers to the delivery baskets.

A trip through a large bakery is a revelation of modern, scientific methods of cleanliness, wholesomeness, and quality in food products. Large machines may be seen that operate with so little outside direction, and with such precision and thoroughness, that they seem almost human.

An automatic flour elevator delivers the flour in its original sacks to a room at the top of the building, where it is blended and mixed. It then goes to the bolting reels and is sifted through large revolving screens of the finest silk mesh.

In the mixing room, compressed air drives the flour dust out of every crevice before the next dough enters the mixer. Each piece of machinery is kept absolutely clean. Even the air is washed by being passed through sprays of water before entering the mixing room.

SAFETY GAUGE GIVES WARNING OF WEAKENED BRIDGES

Bridges of the future may be supplied with recently invented strain detectors as permanent equipment, to guard against excessive stresses and danger of collapse.

On metal rods, braces, and beams regularly exposed to heavy loads, the recorder will give warning of weakened parts in time for inspection and repair to prevent accidents. Clamped on the girders, the device records strains by means of two sets of carbon blocks whose resistance to electricity is raised and lowered by pressure. If the strain is in one direction, pressure on one set of blocks is increased, and if the pull is reversed, it affects the other set, causing corresponding variations in dial readings.

MAN AN ELECTRIC MACHINE, IS THEORY OF DOCTOR

Likening the brain and liver to positive and negative poles of an electric battery, a scientist recently advanced the theory that the human body is a machine without a soul, driven by electricity and controlled by the strong emotions, which act as levers. Nerves are regarded as connecting wires. The supporter of the idea asserts there is much evidence to show that men and animals are constructed of component cells, each of which is an important "electrochemical" part. Sleep is explained by this theory as the period when the voltage used in driving the battery is being restored.

So keen are the organs of smell in a vulture and a carrion crow that they can scent their food for 40 miles.
WOLVERINES IN FINAL STAND IN WILDS OF SIERRAS

Driven from other parts of the country, many wolverines inhabiting the wilds of the Sierras, whose appetites cause them to eat porcupines, are being killed off by the quills of their victims. These strong, heavy beasts often follow the lines of fur-trappers, eating and destroying the catches.

WOOD IS TURNED INTO MILK THROUGH CATTLE FODDER

Old paper, cardboard and sawdust are being made to yield milk and beefsteak in Europe as a result of a discovery of a scientist by which those articles are turned into a substitute for fodder. Treated with chemicals, a quantity of paper is passed through a machine and emerges as varicolored flakes or strings resembling macaroni. This, mixed with the usual foodstuff, not only supplements it, but the cattle like it, and, seemingly, thrive on it. Reports state that the milk is improved both in quality and quantity. Thousands of tons of sawdust are turned into animal fodder also.

VACUUM CLIP FOR WINDOWS HOLDS DISPLAY CARDS

As a substitute for gum stickers, a vacuum clip has been made that provides a neat and clean way of holding posters, announcements, advertisements, and price tags on store windows or showcases. By moistening the face of the rubber cup and pressing it firmly against glass or any smooth, non-porous substance, it will cling so tightly that it will support a weight of 10 pounds. Inserting the finger nail under the cup releases it. Thus it is possible to display cards or posters on surfaces where it would be impossible to drive tacks, or where glue would leave an unsightly mark. It also may be used in suspending glass shelves for exhibiting jewelry or novelties. In the home it is handy for holding curtains, ice cards, and rent and "for sale" signs.

EGG IS CUT INTO NINE PIECES WITH STROKE OF SLICER

With one stroke, a slicer, recently patented, cuts a hard-boiled egg into nine thin layers for salads, sandwiches, and other uses, by drawing fine wires through it. To protect the delicate wires from damage they may be lowered beneath the frame when the device is not in use. Another similar device is being manufactured for the cutting of bread into thin slices.

To encourage the adoption of the American national game, the government printing office of the state of Yucatan, Mexico, has translated baseball rules into Spanish.
GIANT FIRE ENGINE FEEDS MANY PIPE LINES

With a powerful engine that feeds 24 lines of hose, a giant fire truck has been tried in France. Congestion of streets with firefighting apparatus will not be necessary when this monster is used. Two intake pipes connected at the bottom of the engine supply hose attached at the front and back of the truck. In a recent test, 24 men with fire hose, lined up on a river bank, created a curtain of water 100 feet long and almost as wide. By using extending intake lines, the truck can be stationed far from the water plug and develop pressure enough to cover an ordinary-sized building with a flood of water. The machine's heavy base supports an extension ladder.

ANCIENT, FIRE-SWEPT CITY FOUND IN RIVER BED

Charred remains of a beautiful Indian city, believed to have been destroyed by the fire of enemies long before the advent of the white man in America, were discovered recently in a river bed in the South. Temples and terraced hills bore mute testimony to the splendor of a long-forgotten people. Charred woven reed tapestry was found under an overturned wall. In the center of the city, the original summit of a great hill had been cut away to form a level plaza 1,000 feet in length and 500 feet in width. Around the edge of this space were built small mounds and earth lodges of sun-baked clay. It is believed that several thousand persons once lived in this forgotten city.

BEETLE'S GLOW LIGHTS ROOM

In the wilds of Costa Rica, large beetles have been found recently that emit an almost continuous light so brilliant that one or two of them, imprisoned in a glass, will illuminate a large room sufficiently to make print readable. Although the color of the glow is mostly yellow, it differs with individuals, some casting green or ruby shades.
ALL WOMEN ARE BARRIED OUT OF MONASTIC REPUBLIC

It is unlawful for a woman to set foot on Athos peninsula, in Greece, where monks of the Greek church live. Eggs, milk, and other farm products, are brought from across the border for the 20 walled-in monasteries built on the steep slopes of Mt. Athos. Outside the inclosures are olive groves, fruit orchards, and vineyards, worked by the monks and lay brothers, who maintain a republican form of government.

TEN-THOUSAND-YEAR-OLD BONE HARPOONS ARE FOUND

Belonging to the time of prehistoric man, two bone harpoons, one four and a half inches long and the other 10 inches, have been dug from a peat bed in Yorkshire, England. The peculiar markings on the weapons show them to be the work of Maglemose men, people supposed to have lived 10,000 to 20,000 years ago in a place in Denmark called Maglemose, where many relics of the ancients have been discovered.

HOUSEHOLD REMINDER KEEPS TAB ON SUPPLIES

When groceries should be ordered, red arrows are pointed at the required items named on a household reminder recently patented. On a metal frame that hangs in the kitchen are listed 52 kinds of supplies, from almonds to wax. Beside each name is a white arrow. When things are needed, the proper arrow is turned over so that the red side appears as a warning.

Thus the busy woman is saved time in preparing her marketing list.

COLOR MUSIC RIVALS HUES OF SUNSET OR RAINBOW

Color music, or the production of constantly changing hues like the shades of a rainbow, is the feature of an invention of an Australian. Organ or piano keys are connected by electric wires with a series of incandescent lights that are illuminated when the instrument is played. Bass notes control darker tints than those produced by the treble notes. Pneumatic control is used for varying the intensity of the lighting in accordance with the force or lightness with which the keys are depressed. The globes are inclosed in reflectors, in front of which are placed screens of varying hues. To produce pleasing shades, there are interposed palms, flowers, rocks, and figures between the lamps and a white screen. Alternately, the bulbs may be made to project their rays on a semipaque glass.

FOLDING HANGER FOR CLOTHES KEEPS SUITS IN ORDER

Designed to conserve space in a crowded wardrobe and to store garments in an orderly fashion, a clothes hanger that may easily be installed in a wardrobe or closet has been patented recently in England. The device attaches vertically to the wall or door of the receptacle and holds suits, coats, and dresses flat and free from creases. To put clothing away, an arm with notches, each receiving an outfit's individual hanger, may be swung outward and returned to its normal position and locked in place.

Sold by E. B. Upton & Co., 38 Conduit St., London, W. 1. England
In Shaping the Core to Form the Inside of the Bell, the Curved Board is Drawn over a Layer of Soft Clay.

Grease is Applied to the Plaster Cast of the Bell, So That the Clay Molds can be Easily Removed When Hardened.

Above: Placing Ornamental Designs of Wax on the Surface of the Plaster Cast. Below: Casting Pit Where a Dozen Large Bells are Made at the Same Time.
Since the first dawn of civilization all of the terror, sorrow, and joy of mankind have been voiced through the brazen throats of bells.

For more than 1,500 years they have heralded the crash of falling empires, the birth of new nations, wars, revolutions, catastrophes. Sometimes clamoring in wild alarms and then again pealing out messages of good will, their notes have marked every page in history.

Evolved slowly through the ages from the great gongs used to call together members of a tribe, bells have been made of many metals and their construction has taxed the skill of artisans for countless generations. They also have influenced architecture, lofty towers and steeples being built to house them as they increased in size.

Like many other things which have come down through long years of change, bells have been made in many shapes. Long, narrow ones, square and low, preceded the gracefully curved, trumpet-mouthed type designed about the 16th century, many of which still exist to charm the ear with their soft, sweet tones, carried from afar.

Some of the earliest bell makers traveled about, setting up their foundries and casting bells wherever they were desired. Later, as the size increased and the means of transportation were improved, central manufacturing plants were established where large molds could be built.

In making a bell, it is first drawn on paper. Then two wooden legs are made, the underside of one curving to the shape of the bell's inner shape, while the other leg conforms to its outside surface. These legs are pivoted to the top of a stake driven into the ground, around which is built a brick cone. This is covered with soft clay and the first leg run around it, shaping it to the inside of the bell.

Grease is smeared over the form, another coat of clay added, and the second leg drawn over it, forming a complete plaster cast of the bell. This also is greased and the entire mass covered with another layer of clay. When this is dry, it is lifted off and the inner shell removed. After the cover is replaced, the melted metal is poured into the mold to form the bell.

First used singly, bells of many sizes were combined later in groups to produce various effects, from the faint, musical tinkle of the clock to the deep-toned, cathedral chime.

As years passed, the number was increased so that the playing upon them of complicated musical compositions became possible. A variety of tones was made possible by changing the composition of the metal of which they were cast.
In the early days the chimes were played by hand, the bell-ringer swinging the tongues by means of long ropes. Then the ropes were attached to a series of pedals for the operators' convenience. Now, however, the bells are played by an electrical device giving the greatest possible range of tone effects.

STEAM OF NATURE'S BOILER HARNESSSED FOR POWER

In a quest for cheaper power, engineers have long been engaged in attempts to shackle the earth's internal energy. Experiments are being conducted in a region called the “hot belt” of northern California and Nevada, to learn the possibility of harnessing the steam that is there generated. By drilling into the ground a pressure of from 30 to 70 pounds has been received at the surface. Already one engine is using underground power and experts expect to pipe this low-cost energy over a large radius. Electrification of railroads in that territory and extraction of carbonic gas from the steam for preserving shipments of fruit are regarded as future steps. Since 1904, northern Italy has been supplied with electricity produced by engines driven by such underground steam power.

SMUTLESS WHEAT NOW GROWN TO INCREASE YIELD

After ten years of experimenting, scientists in a western college have found a way to grow smutless wheat. Tests on an acre of grain showed less than one-tenth of 1 per cent of smut. Farmers who visited the field declare it will provide 40 bushels to the acre. The discovery, it is believed, will result in a larger production and less loss by damage to threshing machines. By various processes, the scientists destroyed the texture from which smut grows.

WRINGER FEEDER CUTS RISK OF CRUSHED FINGERS

To remove the risk of crushing fingers in a clothes wringer, a handle with rounded ends for placing material between the rollers has been invented. It is unnecessary to have the hands near moving parts of the machine when this feeder is used.
POPULAR MECHANICS

MILLION WASPS ARE FREED TO WAR ON CROP PESTS

One million wasps, the size of pinheads, have been imported by the government and are now distributed in the East to destroy the corn borer. The wasps will save millions of dollars in crops for the farmer, if they serve as well as they have in Europe. Whether they can flourish in this climate has not been determined. The borer, resembling a caterpillar, attacks corn, beets, celery, beans, rhubarb, potatoes, buckwheat, clover, and many other products. By laying eggs on it, the female wasp kills the borer.

U.S. DYE INDUSTRY'S GROWTH BREAKS ALL RECORDS

Since 1914 the dye industry in the United States has increased its production almost ten times. Now American dyes supply 93.5 per cent of the color used in this country for cloth, paper, leather, hats, inks, polish, food, and many other things. The number of makers has increased from seven in 1914 to 87. The amount made in this country in 1914 was more than 6,000,000 pounds. Last year it was 64,632,187 pounds. Dye experts on a research staff of chemists are constantly engaged in bringing out new colors and new processes.

FOLDING CHAIR FOR BABY SAVES NURSERY SPACE

Space in a crowded home is conserved by a baby chair that is made to be folded up and placed out of the way when not in use. For the entertainment of the child, a row of colored beads is fastened to a rack that locks it in the seat.

GRIM FIGURE OF UNDERTAKER IS WARNING TO CARELESS

To warn pedestrians of the danger of crossing a street against traffic, Detroit has tried the experiment of erecting queer signs, fashioned after the figure of a giant man. These are put on corners where fatalities or serious injuries have occurred. The striking figures, almost ten feet high, hold in their hands a card that calls attention to an accident that has happened at the locations where they are placed. Black crepe cloth is fastened to their hats and swings in every passing breeze as a grim reminder to "jay-walkers." It is said that very good results have been obtained by their use, as the quaint figures never fail to attract the eyes of the passers-by.

INDOOR GOLF COURSE OF FELT TEACHES HOW TO PUTT

For entertainment as well as instruction, a golf course for playing indoors has been placed on the market. It teaches beginners correct stance, grip, and putting stroke, and permits the accomplished golfer to practice at home. The hole is similar to that of an outdoor putting green, while the "course" is of smooth felt, so that the ball will roll in the proper direction. As there is a trap behind the natural stroke may be used without anger. Grown-ups play with regularity, while children use smaller ones.

FOUR BILLION DOLLARS IN GOLD IN AMERICA

Believed to be the largest amount of gold the world has ever known, there is in the United States, now, $4,025,000,000 worth of the yellow metal. This is $300,000,000 more than the country had a year ago.

Mine explosions are said to be prevented and foul air purified by spraying the shafts with a liquid recently discovered by an English miner.
INVALID CHAIR FROM ROCKER PLACED ON WHEELS

Any rocker can be made into an invalid's chair by placing it on a patented metal frame fitted with wheels. Chair legs or rockers are firmly clamped to the base without marring the wood. Steering is made possible by small wheels at the back, which turn at any angle. As it requires little space, it can be carried easily.

CITY OF BURIED PAST REVIVED FOR VISIT OF KING

After being buried for many centuries on the lower slopes of Mt. Vesuvius, Pompeii again has taken on the glory of its past. Water still plays through pipes 2,000 years old. Fish swim in the original marble bowls. Vines and shrubs decorate the pergolas, just as they did in the days when Julius Caesar landed in Britain and London was a forest. Fresh roots recently replaced the ancient ones. For 12 years scientists have been clearing away débris covering one narrow street in the buried city. After digging a few inches at a time, they picked off the ashes and dirt by hand. When the slightest trace of a building appeared, they summoned experts who delicately removed material, strengthening the arches or pillars with cement, inch by inch. In one house the smoke of a lamp is still seen and the roof is covered with the same tiles that sheltered the long-dead owner. Advertisements, painted in red and white, election notices, and other posters still remain on the walls. Everything has been restored, as nearly as possible, to its original form in anticipation of a visit from the king of Italy.

WOOD CARVING REVEALED AS DYING ART

Flowers, cups, goblets, and vases, turned and carved in wood by hand, are fashioned with realistic effect by a European artist. His is almost a lost art because machine methods have largely replaced handwork. From remotest ages carving of wood has been a foremost craft, believed to be of greater antiquity than working of ivory. It reached its zenith in glories of the 15th-century cathedrals. To carve in wood is said to be even more difficult than marble sculpture, because wood expands and cracks with changes in temperature and is often injured by insects. Failure to fashion the more delicate parts of a design with the vein may result in damaged work. Fragile petals and thin stems arranged across the grain in reproducing a flower may break, owing to expansion of the wood fibers caused by moisture.

Scientists are contemplating experiments to determine whether seeds removed from the tomb of King Tutankhamen, in Luxor, Egypt, still retain life after their long burial. Powerful electric lights will be used in the tests.
FIRE VICTIMS TO SLIDE THROUGH SILK TUBES

At Left: Start of Plunge Through Silk Tube from Window; Center: Men at Bottom Controlling Speed by Grip on the Net Cover; Right: A Slide to Safety

For saving the lives of persons trapped in burning buildings, a long, silk tube, inclosed in strong netting, has been designed. Attached to a window, the victims may dive through it to safety. Firemen in the street control speed of the falling body by holding taut or loosening the bag at the bottom of the net. In a recent test, firemen leaped from a third-story window, and a young woman plunged head-first through a forty-foot tube. Invented by a middle-western man, it is made in various lengths to be fastened to any window in a building several stories high, after hooks have been placed in the frame.

FOUNTAIN OF ETERNAL LIFE DESCRIBED IN LEGENDS

Indian carvings signifying perpetual life, found on the rocks through which flow the hot springs of the Rio Grande Cañon, have caused much speculation recently as to whether the site is that described in legends of the extinct Aztec race which told of spouting waters that brought never-ending youth. Natives have named the place Wa-pu-me, meaning the Spring of Life, and for years have bathed there. Near by are ruins believed to be the remains of the ancient city of Mectil, founded by Aztecs who marched northward from their former home and settled near springs reported to possess the power of preventing old age. History records the efforts of the early Spanish explorers to confirm these stories which resulted finally in the occupation of what is now New Mexico.

Of all the states, Florida has the most water within its boundaries, totaling 4,440 square miles.

METAL FRAME PROTECTS AUTO RADIATORS FROM DAMAGE

To prevent damage to automobile radiators, a metal frame that may be attached to any car in a few moments, has been marketed. Heavy bars widely separated so they cannot interfere with radiation, receive the heaviest part of any shocks occurring in head-on collision. The device, strongly constructed, is enameled to correspond with the color of the body; and adds to its neat appearance. It requires no attention after once being placed in position.

The Stewart eine Works Cincinnati Ohio
Crack as It First Appeared; the Wider Gap Produced by a Slight Earth Tremor; and the Chimney after the Halves Were Drawn Together by Iron Bands.

Cracked by the expansion of acid vapors, a 50-foot chimney at an eastern powder plant recently was tied together with iron bands. The stack served to carry off waste gases from the chamber of an oil-heated furnace. Breaking of pans in which material used for the recovery of sulphuric acid is heated, allowed the gas to flow into the crevices of the bricks, and, because of its enormous spreading and lifting power, caused the chimney to split into halves. A slight earth tremor completed the process, leaving the right half of the chimney separated from the left by a foot, and in such bad condition that a heavy wind would have toppled it, probably resulting in damage to nearby apparatus. To quickly and economically draw the parts together again, workmen placed metal bands at each corner and welded them in place with iron rods.

Starting at the bottom, they gradually drew the halves together again, the right swinging into position as bolts in the rods were slowly tightened, while the left remained stationary.

The work was accomplished without accident, and the stack now is expected to last at least the life of its iron bands.

---

**BRACELETS FOR HORSES KEEP THEM SAFELY "HITCHED"**

As few of the larger cities still have the once familiar hitching racks for horses, teamsters and drivers must find other means to meet the need. One of the methods now employed to prevent a horse from wandering or running away, is to shackle him with "footcuffs," or leather bracelets. With the device fitted snugly around his forefeet, the animal cannot move far without throwing himself. Fastened with a snap, it is quickly removed, and can be kept under the seat of the vehicle.

---

**LOCUSTS EATEN BY ISLANDERS**

Although they destroy crops, locusts are highly regarded as food by natives in the Philippine Islands. When the swarms fill the air, looking like snowflakes, all sorts of nets are used to gather in the harvest. To prepare for a meal, they are put in a sack and soaked in hot water. Then they are cooked or fried, the legs and wings being pulled off. In one province recently, 1,500 sacks of the pests were caught during one swarm. Men, women, and children joined together in a small army to catch the insects.
These Articles Are for Everyday Use But—Can You Name Them?

17, in the home. No. 18, in the home. No. 19, for man's use. No. 20, in the country. No. 21, in the home or restaurant. No. 22, in the wilds. No. 23, in the home or office. No. 24, in the home. No. 25, in the home. No. 26, for man's or woman's use. No. 27, on the farm. No. 28, anywhere. No. 29, in the home. No. 30, on the farm. No. 31, in a sport or business. No. 32, in the home or in a profession.

Popular Mechanics Magazine offers no prizes for correct answers to these problems, but presents them for the interest it believes its readers will find in attempting to determine the nature of the various articles shown.

If you think you have the right answers you can find out by comparing them with the correct list which will appear in Popular Mechanics Magazine for November.

In September the following articles were shown. No. 1, dentist's drill. No. 2, corncob curry-comb. No. 3, collapsible oven. No. 4, umbrella. No. 5, cigarette case. No. 6, book rest. No. 7, vacuum sweeper. No. 8, hook and eye. No. 9, hot-lid lifter. No. 10, necktie holder. No. 11, fly-swatther. No. 12, insect-proof cup for furniture. No. 13, spool holder to be attached to waist of seamstress. No. 14, milk-bottle carrier. No. 15, safety-pin. No. 16, clothes wringer.
WATER TAKES PLACE OF ICE IN COOLER FOR FOOD

For farmers and others who find it difficult to obtain ice, a cooler is being made kept saturated by water from a pan at its top. Rapid evaporation of the moisture from the cloth draws the heat from the interior and reduces the temperature to a point sufficiently low to prevent food from spoiling. A single filling of the basin usually lasts 24 hours. Light in weight, it may be moved about easily. When hung in a well, the evaporation system is not required. Suspended just above the top of the water, the provision chamber may be easily raised or lowered. A ratchet holds it firmly at any desired point. Built of steel and cylindrical in shape, both types are easily cleaned and sanitary.

BEES KILL LIZARD AND TURN IT INTO A MUMMY

Evidence that bees stung a lizard to death and then embalmed the body was found recently in the South, when small boys pulled the reptile from a hive. Scientists agreed that it had wandered into the home of the bees about a year ago, squeezing under the opening, and was killed. There were signs that the bees had tried to cast out the intruder. When they failed, a thick coating of wax was applied to the body. This mummified it perfectly.

TIDE MACHINE DOES WORK OF SIXTY EXPERTS

Equipped with a machine, recently designed, government officials have been able to predict the heights of tides and the exact hours at which they will occur in all the harbors of the world during the year 1924. In order to prepare such a chart of information, it would require the services of at least 60 experts through a long period of figuring, with a less accurate result.

Predicting Time and Heights of Tides in the World's Principal Ports Far in Advance of Their Occurrence, Is the Work of This Remarkable Piece of Machinery.
POISON CUPS TO DRIVE AWAY EVIL SPIRITS IN KONGO

When natives of the Kongo find one of their number acting queerly, he is thought to be filled with evil spirits, and a meeting of the tribe council is held, deciding that the demons must be driven from the victim's body. To do this a poisonous root is boiled and the patient asked to drink it. If he refuses, he is charged with being a coward and claimed to be in the possession of devils. The natives placed in this position do not like to have their courage questioned, and swallow the liquid, which frequently results in death. The Belgian government, it is said, has passed a law against the practice, but it is still carried out in secret.

X-RAY SHOWS WHY GOLFERS MISS HOLE IN PUTTING

Why golfers sometimes miss the hole in putting was shown by a western scientist recently when he made X-ray pictures of 20 kinds of golf balls. They showed that in only a few were the hard, resilient cores of gutta-percha exactly round. As a straight course through the air or along the green depends on a properly balanced ball, it was said that an imperfect core might pull or slice the drives, no matter how skillful the player.

Sieves woven of bronze wire and used in the testing of the fineness of cement have 40,000 holes to the square inch.

AIR JACKET AIDS SWIMMERS BY FLOATING THE BODY

To aid in teaching persons to swim, an air jacket that is worn either under or over the clothing has been invented recently. It is strapped about the waist and the chest and when not filled with air lies flat against the body. Sides and bottom of this jacket, made of rubberized fabric, are filled with air blown through valves at the top. The section over the lungs is not inflated. The life preserver, which will roll into a small bundle and weighs only a few ounces, will support a weight of over 200 pounds.

ALLIGATOR BOAT ABLE TO PULL ITSELF UP ON BANKS

For use in hauling logs on small lakes there has been made in the East a 40-foot boat that moves on land or water. When on land the rudder is raised, the propeller shaft lifted, and the engine moves a rotary drum that works by tackle and fall to pull the boat ahead, the rope being hitched to some firm place. The boilers are set so that they are in an upright position no matter how rough the road. When the vessel reached the loggers, it pulled itself out of the railway car down to the water, sailed across a lake, moved across land, and at last, still under its own power, reached the river, where it is used in hauling logs floated down from a lumber camp. Because of the ability to move on both land and water, it is called an "alligator" boat.
MAKING MUSIC WITH CHISEL, SAW, AND HAMMER

With the application of modern methods that have developed since the 10th century, the piano no longer is the work of a single artisan but is the product of the combined ability of a number of skilled workers. Working with saw, hammer, chisel, and glue they make a musical instrument that rivals and even surpasses any creation of the old masters of the trade, who took weeks and even months to turn out one piano. Each man, an expert in his particular trade, is assigned to a certain part step and are said to absorb more of the shock than rubber alone. To prevent slipping on wet surfaces, the heel bottom is ribbed.

SPRINGS IN RUBBER HEELS MAKE WALKING EASIER

Rubber heels have been patented with steel springs tightly locked inside to add to the wearer's comfort by cushioning the jar in walking. They contract at every

U. S. MONEY TAKES PLACE OF PANAMA CURRENCY

Panama's money, first made in 1904, has passed out of use in that country, and today practically the only kind in circulation is American banknotes and coins. This was brought about, it is claimed, by high prices of silver in 1917, resulting in natives secretly selling their coinage to outside buyers for more than it was worth in their own country. The dollar now acts as the basis for all kinds of business dealings, and is considered to be of great value to the people in general, who have shown a preference for it.

X-Ray View of Rubber Heels That Have Steel Springs in Them to Help Absorb the Shock
WHITE WOMAN RULES ISLAND OF RICH PEARL DIVERS

Badu, one of the most prosperous islands off Australia, is ruled by a white woman. She is the governor, teacher, preacher, judge, and prohibition officer for dark-skinned pearl divers, who have found rich rewards in disposing of the shells under her management. The women, also under her control, make a lace, fine in texture and beautiful in pattern. When their day's work is done the "governor" meets them on the green, where they practice English folk dances. Liquor is forbidden and the island is reputed to be a model of cleanliness.

WALL BRACKET FOR LIGHTS MOVABLE ABOUT ROOM

Rearrangement or exchange of electric-lighting fixtures is now possible by a movable bracket that is being made with a special wall or ceiling receptacle. Thus any number or styles of lights may be tried out for the desired lighting effect without employing an electrician. By installing several of the receptacles, the location of bulbs may be changed as often as desired to harmonize with groupings of furniture. When a socket is not in use, any other household electrical appliance may be attached.

Blotting paper is being made from wood pulp. Heretofore it was made only from rags, as it was believed that sawdust would not prove sufficiently absorbent. A large proportion of the pulp used is from wood that has not been considered of much value.

BALLOONS KILL GYPSY MOTHS WITH SPRAY OF POISON

For spraying crops with poison powder to destroy gypsy moths, government experts have hung army balloons on a cable stretched between two tall poles supported on a ground framework that moves on wheels. A large supply of insect chemical is carried near the gas bags which furnish the force to scatter it.

CHAIN CARVED FROM MATCH WITHOUT SINGLE BREAK

With all the links joined together, a woodcarver has fashioned an ordinary match into a small chain. Less than 3 inches in length, it is an exact reproduction of a large cable. As the splinter of wood with its inflammable tip is about an eighth of an inch wide, extreme care was necessary to cut out the tiny units, one carved from within the other. Each circle is about the size of the link of a fine watch chain. It was made by Henry L. Brown, of Seattle, Wash.
Noises that interfere with wireless communication are said to be done away with by a machine being tested by the government. The apparatus has eight tubes that carry the sounds to the interior, instrument, the operator finding it difficult to hear distant stations can put the clarifier in the circuit by means of a switch. The tubes then receive the message, convey it to an eliminator, where it where the disturbing noises are filtered out before reaching the receiving device. During the summer months the atmospheric sounds are more numerous than at other times. Equipped with the new is separated from disturbing sounds. It is believed the instrument will prove suitable for use during communication between airplanes for barring out noises from the engines.

RICE PLANTED TO DANCE MUSIC IN JAPANESE FIELDS

Near Osaka, Japan, each year when the rainy season begins, important ceremonies are held by the native farmers to celebrate the planting time for rice. Shrines close to the field where the event takes place are devoted to a kind of religious festival, marked by gay and solemn performances. In the center of a raised platform, a canopy is held by a girl in costume dress, while nine others go through strange dances. Five girls garbed as rice-field workers wade into the marsh and plant the grain in time to music.
WOMEN INVENTORS ARE BUSY ON INDUSTRIAL PROBLEMS

To learn just what part women were taking in inventions, government officials recently undertook a survey that showed, over 5,000 patents had been granted to them in 10 years, more than the total for 105 years previous. The first patent granted an American woman was given by the British government to the wife of a Pennsylvania planter, for a device to clean and cure corn. Labor-saving machines are said to make up the majority of women's inventions, one making an apparatus for scattering fertilizer, another an article to strip sugar cane, while an adjustable horse collar was made by a Montana woman. For the kitchen, a pie pan was brought out that prevented juices from overflowing the rim, and a wooden mixing bowl was invented that would not split. Almost every line of business was included, but 1,385 patents were for articles of housekeeping.

RUBBER COVER FOR PIPE KEEPS POCKET CLEAN

To keep tobacco ashes from spilling into the smoker's pocket, a rubber pipe cover has been made, having an asbestos top for the bowl. It can be put on while the pipe is hot without danger of sparks setting fire to the clothing, and also serves to protect the stem from filling up with small particles of dirt when the pipe is not in use.

Mica is now being obtained from crystalline rocks that once were at least 5,000 feet below the surface of the earth.

BABY CRIB IN WINDOW CAGE FOR FRESH AIR AND LIGHT

In a wire cage attached to a third-story window of an apartment in London a baby crib is placed so that the infant will have fresh air and light. Because the building was dark and unhealthy for the child, the father built a compartment of heavy wire netting, placing it on the window sill and bolting it to the brick walls with steel strips. By raising the window the crib is taken from the cage. Cloth or netting protects the baby from dust or insects.

LIGHT RAY TO HOLD WEIGHTS

To resist the attraction of the earth on heavy bodies, experiments are being made by a western man with a process which, it is claimed, will overcome the laws of gravity and cause the most solid-metal objects to rise without any other aid. This strange force, it is said, will come from a light ray capable of reducing the hardest material to dust thinner than air, and of printing a photograph through a steel plate 5\(\frac{1}{2}\) inches thick in five seconds. When developed, this power is expected to make wings on airplanes unnecessary, and to do the work of the airship's gas bag by creating an energy that will act against the strongest downward pull, raising and lowering the craft by the amount of current allowed to pass into it, while small propellers will move it.
TWO TONS OF COPPER IN PAN FOR BREWING PLANT

More than two tons of copper were used in making a pan for an English brewery. The big dish is over 13 feet in diameter and acts as a sort of mixing basin when brews are first started. To transport it, the dish would have to be set on edge.

FLASHLIGHT FOR SCREWDRIVER

With a hollow handle holding a flashlight, a screwdriver is being marketed to eliminate some of the trouble of working in the dark. The bulb throws a bright light upon the end of the tool. As only one hand is needed to operate it, greater freedom of movement is permitted.

FLOUR SIFTER RUN BY THUMB OVER THE HANDLE

So constructed that it may be operated by one hand, a flour sifter has been invented. Although simply made, it has all the durability and efficiency of the old type and is easier to use. Instead of the usual crank at the side, a spring lever is fixed to the handle of the utensil so that agitating bars within the receptacle are swung toward and away from each other by an up-and-down motion of the thumb. Thus the flour is sifted quickly, leaving one hand free.

ANCIENT CHERRY TREE HELD UP BY PROPS

To support the limbs of a cherry tree two centuries old, growing in a Japanese park, crosspieces at the tops of long pine poles stuck in the ground, are bound to the branches by straw ropes. Latticework arbors built close under the lower part of the tree, keep it from drooping. The natives are watchful of their favorite cherry trees, preserving them in various ways as they become aged.
"College" Teaches Parrots How to Talk

For teaching parrots how to speak English, that is, 10 to 20 commonplace phrases, a resident of a southwestern state has established what is said to be the largest school of its kind in the world. Only birds 6 to 8 weeks old are accepted. Most of them come from the wilds of Mexico. Standing in front of a row of cages, an instructor repeats the few words that constitute a lesson. Those in the class that show more aptitude than others are quickly promoted. Thousands graduate each year from the "college." Even while the birds are awaiting shipment to new owners, they are occasionally made to go over their little speeches so that they won't forget how to talk.

Ant Hills Made Into Houses Popular in Africa

Material used by ants to make their hills, the natives of South Africa mix a plaster which is said to be stronger than burned brick, to build their houses. Sometimes a single mound thrown up by the insects will furnish enough for several good-sized buildings. The substance when hardened is so tough that only an experienced person can succeed in driving a nail through it.

Rain Heavier in Afternoons

Along the Gulf coast and in southeastern states, records have been made showing rainfall to be more frequent in afternoons than in mornings. This reason is given for cool nights which are said to prevail throughout those sections of the country, the sun being hottest from noon until nightfall, having its heat offset by moist atmosphere created by such downpours.

Tanklike Auto Wins Race in a Foreign Meet

First place among the French entries in a recent meet in Europe was won by a racing auto that looks like a tank. The low metal body, almost reaching the track at front, back, and sides, covered all of the car excepting the wheels. A shell-like specially built front was over the radiator. Low hung, the center of gravity close to the ground gave the car an advantage in making quick turns.

Carrier for Freight Truck Saves Space and Money

With a carrier for a two-wheeled freight truck, the amount of handling of separate pieces is cut down, three men can do the work of four, and damage, loss claims, and other expenses are thus lessened. A type made of wood and steel has recently been invented and is in use on an eastern railway. While being loaded it stands upright. A truck is slipped beneath, and is moved to the desired spot where it is left, still loaded. Thirty to 70 per cent of handling of package freight now necessary is eliminated by use of the carrier, it is said.
PORTABLE DERRICK HAS WIDE RANGE OF USES

Wherever loads are to be hoisted, whether a few feet or several hundred, a one-man portable derrick lately marketed will prove of value.

The derrick is made in two major parts, the beam, including the hoisting mechanism, and the base, each of which can easily be carried by one man. The hoist-
exceedingly useful to anyone whose work requires the laying out of rafters of every description, stairway stringers, tank work, columns, silos—in fact, all work where calculations for length, pitch, or bevels are necessary.

MACHINE MEASURES UNBALANCE OF ROTATING PARTS

Static and dynamic balance of the rotative parts of high-speed machinery may be obtained at the same time by means of a recently developed machine.

The machine measures how much, and just where, a part is out of balance, and will accommodate a wide variety of work, including crankshafts, motor and generator rotors, flywheels and spindles, and it is stated that the operation of determining the unbalance is as simple as using a pair of scales. The process of balancing parts is a rapid, exact, and economical one, owing to the simplicity of operation, and the elimination of a preliminary static-balancing operation on separate shears. The machine will receive parts up to 25-in. swing, and 48 in. long, weighing up to 1,000 pounds.

UNDERGROUND SHOVEL CUTS MINING COSTS

Hand shoveling constitutes one of the greatest cost factors in underground mining; not only is it hard to obtain efficient help, but, in the crowded "breast" of a vein, there is often not room enough for more than three or four men to work, and, after a blast, it is some time before the men can return to work, thus adding the idle time of many men to the cost of production.

For these reasons, and for many others, an efficient underground loader now on the market will prove valuable. The machine is air-driven, and is made in three sizes; the smallest can pass through a space 42 by 48 in. in size, with seat and bucket arm removed, and can be pushed anywhere by one man. It is claimed that one of the machines, in driving a rock drift, 15 ft. wide and 9 ft. high, saved $1,700 in 25 days, over the cost of hand shoveling.

STRAIGHT-LINE GANG DRILL SPEEPS UP PRODUCTION

Designed to meet the requirements of work where the holes are all in one straight line, and at varying distances apart, a gang drill now on the market should meet with instant favor.

Each head is in a gear case by itself, and the heads can be set any distance apart from 1 1/4 in. to any required distance within the range of the tool. The setting operation is very simple, as it is only necessary to loosen a few screws and slide the heads to the required positions. The machine may be furnished with a foot, hand, or automatic table feed, depending upon the work for which it is to be used, and the speed may be adjusted to suit either wood or metal.
SIFTING MACHINE EFFECTS
RIDDLING ECONOMY

While designed especially for foundry work, a sifting machine now on the market will prove of great value wherever

sand or other granular material must be riddled in quantity. The machine is self-contained, and may be suspended from a crane hook, bracket, beam, or any other convenient place. There are no legs or tripods underneath to impede the operation, and it can be hung at any height to suit the workers. In ordinary foundry work, it will riddle 1 ton of oil-core sand in 3½ minutes, or 1 ton of foundry sand in 4 minutes.

SUBMERSIBLE DYNAMO USED IN WATER METER

Ordinary water-flow meters, using a cup-and-vane mechanism, indicate only average rates of flow, as marked by a counter that operates after a certain number of revolutions; an electric water-flow meter, recently invented in Switzerland, on the contrary, registers the rate of flow at any moment. The instrument is like a small torpedo, about 20 in. long, and is suspended in the water by means of an encircling strap. The nose of the torpedo carries a two-bladed propeller and shaft, which drives a simple dynamo

contained in the body. The current generated is recorded or indicated by a galvanometer, which is calibrated to show the rate of current flow.

The meter is said to be equally satisfactory in open water and in pipe systems, and for recording the flow of gases. It is very little influenced by temperature changes, and responds to flow in either direction.

BOILER-TUBE TOOL CLEANS TEN A MINUTE

Ten tubes cleaned a minute is the record claimed by the inventor of a recently patented boiler-tube cleaner. The "gun" is mounted on trestles in front of the boiler, and an air hose, with a nozzle on the outer end to fit the tubes, is attached to it. One man operates the gun, another the hose. The gun may be operated and the tubes cleaned as fast as the man with the hose can move.

ALL-STEEL ROAD SCRAPER HAS LONG LIFE

Built of materials that insure great strength and long life under hard wear, and reinforced wherever extra strain develops in operation, road-maintenance engineers will appreciate an all-steel spring scraper now on the market. The float or plane will go to the side or shoulder of the road, gather the loose gravel and move it to the center of the road in one operation. The scraper can be mounted on a truck, and can be raised and the truck backed up to perfect a bad piece of road without having to turn. In winter, the scraper can be used as a snow plane, and will handle 6 to 8 in. of snow at a speed of 15 to 25 miles per hour.
Building Concrete Retaining Walls

BY A. C. COLE

There is nothing at all difficult about the building of retaining walls in concrete, the cost of the work is low, and the finished wall adds greatly to the appearance of the inclosed grounds.

The excavation for the wall footings must be carried below the frost line, and, to cut away the bank so that forms can be used on both sides and the wide footings poured. This, however, is not a disadvantage, as it allows a layer of loose stones, gravel, or cinders to be laid along the back of the wall before filling back the earth, and this helps the drainage.

Various Forms of Easily Made Retaining Walls in Concrete: Details of Molded, Capped, and Inlaid-Stone Tops are Given in the Inserts

where the earth is firm enough, the bank itself may be used as one side of the form, undercuts being made in the bank to form the projecting lower portions of the footings. Where the earth is not self-supporting, it is, of course, necessary

As may be noted in the drawings, the forms are very simple; 1-in. siding is used for the sides, with 2 by 3 or 2 by 4-in. uprights and braces. Enough uprights, braces, and struts must be used to prevent the forms from bulging, and
the walls held the proper distance apart by short pieces of the material used for
the uprights. The walls are held by
twisted-wire ties in the usual manner, and
by cross braces at the top; the spacing
pieces are moved upward as the concrete
is placed.
As soon as the footings have been
placed, and the forms erected, a number
of concrete drain tiles are placed in the
forms, as indicated in the sectional draw-
ings, to carry off water, and the re-
mainder of the concrete is then placed.
The concrete used should be mixed in the
proportion of 1 part cement, 2 parts
sand, and 4 of clean, broken stone, and,
when pouring the concrete, a flat, sharp-
ened stick or a spade should be used to
cut down between the form and the
mixture, to work the stone back from
the face of the wall, rendering the sur-
face dense and smooth.
If the wall is at all long, the work
should be done in 20-ft. sections, moving
the forms along as soon as the concrete
in one section has set, and expansion
joints, of the type shown, filled with
asphaltic felt, provided between sections.
Various forms of coping are shown in
the drawing. The molded top presents
a very neat appearance, and is easily
formed by means of a wooden template,
drawn along the top of the wall while
the concrete is still "green." With a
little more trouble, a neat gutter may be
formed on the back of the wall, the
trough being shaped with a trowel. A
particularly attractive top is formed by
laying stone blocks, as shown in the
lower right-hand view, although this is
rather more expensive.
The forms can be removed as soon as
the concrete has set enough to sustain
its own weight, and the surfaces may be
finished by simply rubbing with a wooden
float dipped in water and sand; in this
way the form marks are rubbed off, and
a smooth, permanent surface obtained.

**Novel Fence-Wire Stretcher**

The fence-wire stretcher shown in the
illustration consists of a short length of

![Diagram](image)

1/2-in. iron rod with a hole drilled through
it as indicated, and the end formed to a
ring large enough to accommodate the
handle of a pair of pliers. When the
wire is to be tightened, it is not cut near
a post, but midway between two posts.
One end of the cut wire is formed into
a loop, and the other end passed through
the loop and through the hole in the tool.
The tool is turned by means of the plier
handle, as indicated, so that the wire is
wound around it until sufficiently tight.
The tool is then revolved around the wire
several times, as shown in the upper de-
tail, and the surplus wire clipped off.

**Increasing Diameter of Small V-Pulleys**

When it is desired to increase the diam-
eter of a V-pulley, such as often found on
the side of a small flywheel, a "rim" of
babbitt can be cast around it, providing
the increase in size is not too great.
Small anchor
holes are first
drilled in the
side of the
wheel, as
shown. A
wooden mold
is then turned
out of good
dry pine to
the new diam-
eter. The
mold is placed
around the
pulley, con-
centric with
the bore, and
clamped in
place, after which babbitt is poured into
the open space between the mold and the
old pulley. If it is desired to use the old
pulley again, it is only necessary to cut
off or melt the babbitt. When melting
the babbitt, whittle a clean surface on the
end of a pine stick and dip it repeatedly
in the metal. When the stick chars, pour
the babbitt.
An Efficient Paste Spreader

In offices where many papers are wrapped by hand for mailing, the paste spreader illustrated will be very useful. It eliminates the paste brush, and speeds up the work considerably.

The base is made from an ordinary 1-in. board. An upright piece of the same material is screwed to one side of the base to keep the edges of the pile of wrappers even. Heavy spikes will serve for the paste container guides, although ¼-in. iron rods are better. The container is a triangular trough with a flat bottom, in which a number of small holes are drilled to distribute the paste along the wrapper edges. Ears are left at each end of the container, and holes drilled to fit the guides, so that the container can move up and down easily. Medium-weight galvanized sheet metal is a suitable material for the container.

To use the spreader, the papers are first placed in a pile under the paste container, which is then filled with paste, mucilage, or glue, whichever is necessary. When a wrapper is drawn out from under the container, it is automatically coated with paste. If it is found that too much paste is applied to the wrappers, the container may be weighted down so that less paste will escape through the holes.—Lowell R. Butcher, Des Moines, Ia.

Novel Mounting for Instruction Manual

In garages and service stations where drawings and wiring diagrams are required for reference while working on cars, it is almost impossible to keep them from being soiled, as they are continually being handled with greasy hands.

To prevent this, in one station, the sheets were glued to the inside of an ordinary roller shade, which was mounted on the wall in front of the foreman’s desk. Whenever the reference prints were to be used, the shade was simply unrolled, and when the job was finished, rolled up again. Besides keeping the prints clean, this prevented them from being creased, torn, or lost.

Cutting Glass Tubing

The illustration shows an excellent method of cutting glass tubing. A block of wood with a V-groove cut in it is attached to the bench; a triangular file is arranged across this, the tang of the file having an eye formed in it, which swings on a pin driven through another block attached to the bench, as shown. The other end of the file is slipped through the end of a coil spring which is fastened to a screw eye driven into the bench, and draws the file downward against the tubing. The tubing is placed in the V-block, between the block and the file. Turning the tube will then cause the file to score the glass, after which a few light taps will break it cleanly.

Information as to where materials and parts mentioned in these pages may be obtained will be furnished, on request, by the Bureau of Information.
Curing a Broody Hen

There are hundreds of ways advocated for curing broody hens, but most of these are not entirely effective. Simply confining the hen in a coop without nests will not cure her, unless she is kept there until completely exhausted. A positive cure, which requires only 5 or 6 days, is shown in the drawing. An ordinary elevated coop will not do the work, as the idea is to prevent warmth under the hen when she sits down, and therefore the floor should not be made of wood, but of 1-in. wire mesh. The air from underneath soon effects a cure; it has done so with the most persistent hatchers.

The coop should be elevated about 3 ft. above the ground, and it should be large enough to accommodate 6 or 8 hens. Pans or narrow troughs, on which the fowls cannot sit, are used for food and water. The top of the coop should be covered to protect the hens from the hot sun and from showers.

Machinists' Hook Gauge

Nothing is so hard to measure in the machining of work on the lathe as the thickness of hubs of wheels, gears, and pulleys. This is due to the fact that many holes are too small to allow the use of a regular hook rule, and even if one could be used, it is often too short to reach through the bore. A very serviceable hook gauge that eliminates these difficulties can be made as shown in the illustration.

The main part of the gauge consists of a suitable length of 3/4-in. drill rod provided with a hook at one end. The hook is made by forging a sharp bend in the rod, and filing it to the shape shown. The straight edge of the hook is filed perfectly square with the axis of the rod, and the corner is filed out with a small round file, to prevent the accumulation of dirt, which would result in incorrect measurements. The notching out of the corner also prevents a burr on the edge of the bore from showing a false reading on the gauge.

The head of the gauge consists of two parts; an inner sleeve, bored out of center as shown, which is necessary to allow sufficient metal for the thumbscrew, and an outer sleeve, bored to a neat sliding fit over the inner one, and having a flange at one end, which is turned perfectly square with the rod. The outer sleeve moves over the inner within the limits of the thumbscrew slot. This always holds the outer sleeve square to the graduation line on the inner sleeve, and as a flat is filed on the rod, against which the screw bears, the whole gauge is kept in line.

Across the face of the outer sleeve is filed an opening, as shown, to expose the surface of the inner sleeve. Midway be-
while measuring between hook and outer sleeve with the scale. When set to size, the thumbscrew is tightened, and, upon applying the gauge to the work, holding the hook against the inner face of the hub and sliding the outer sleeve against the outer face, the amount to be turned off is indicated by the distance between the graduations. This gauge not only indicates when the thickness of the hub is correct, but how much it may be over or under size.

A gauge of this kind, when used for general purposes, should be made of 1/4-in. rod; smaller or larger sizes can be used to suit the work. With the gauge of 1/4-in. steel, holes can be measured through 1/2-in. bores.

**Lubricating Wristpins**

During winter the tractor requires considerable care, as the heavy oil that is used in tractors becomes almost a grease in zero weather, and in this condition does not lubricate the wristpin bearings properly, so that there is danger of burning out the bearings or "freezing" them.

To offset this danger, I provided the auxiliary oiling device illustrated, which consists of a piece of No. 20 sheet steel, hammered to the shape shown in the detail and screwed to the underside of the piston head, so that the spout terminates directly over the oil hole in the top of the wristpin bearing. The point where the device is bolted must be opposite the point where the splash from the crank reaches the inside of the piston, so that the spout will catch some of the oil. This oil will then drop on the bearing where it is needed. The addition of this device has been found to eliminate much trouble previously experienced.—G. G. McVicker, North Bend, Neb.

A tap should never be used to clean a hole in hardened work, even if the work is soft enough to be scratched with a file.

**Holder for Side-Planing Tool**

The illustration shows a useful side-cutting planer-tool holder, which does work that at times cannot be done with the regular planer heads. It can be used on either right or left-hand work.

The tool box is machined on the lower end of the spindle, and fits against the shoulder at the rear of the body. The upper end of the spindle is threaded and fitted with a washer and two adjusting collars; over the latter is placed a collar, which is fastened to the spindle with a setscrew. A stud in the top of the collar, and a post in the body of the holder, are connected by a tension spring, which pulls the tool box back against the shoulder at the end of the return stroke. Cutters, forged with an offset large enough to allow the lowest edge of the tool to project below the heads of the setscrews in the tool box, allow cutting to the bottom of slots, as in the drawing.—R. W. Laing, Fergus, Can.

**Absorbing Excess Oil on Dirt Streets**

When a dirt street is oiled, the oil is usually tracked all over where it is not wanted. This was prevented, in an Iowa town, by spreading powdered stone— refuse from a stone crusher—over the road. The stone dust absorbed the excess oil, and it packed down at once.
Cement and Cloth Repair for Radiator

The soldering of a honeycomb radiator is difficult work and can be accomplished satisfactorily by an experienced repairman only. However, a repair for small leaks, that can readily be made by anyone, is shown in the illustration. It consists of packing strips of cloth, saturated with a thin mixture of Portland cement and water, into the small spaces where the leaks are found. The cement hardens and binds the cloth into a solid mass. It is not necessary to remove the radiator when making this repair, but the water should be drained out so that the cement particles in the cloth will not be washed away, and the cement should be permitted to set before refilling the radiator.

Setting Compound Rest for Tapers

For certain kinds of taper work, when the compound slide is used, swiveled around, and fed by hand or power, the taper is best found by the trial scribining of a surface plate and clamping the slide in position when the scribed angle is found to be correct. A small surface plate, or any smooth metal plate, is clamped to the lathe bed, while a surface-gauge scribe is attached to a holder clamped in the tool block, the plate being either charked or blued, according to the accuracy required. Then the lathe carriage is run along by hand, far enough to allow the surface-gauge pointer to scribe a line along the plate; this line, of course, being parallel to the lathe bed.

It is assumed that a template showing the correct taper is at hand, and that the exact reading of the taper angle, in degrees, is unknown, as is often the case. If the angle is known and the compound rest graduated, it can be set off at once without the necessity of the scribing process described. Using the template, another line is scribed on the surface plate to make the required angle to the line already made; then, the compound rest is swung around to approximately the right position, clamped, and the compound slide traversed. The surface-gauge pointer, being still in place, will indicate how closely the rest has been set, and the rest is swung and reset until the scriber follows accurately the line scribed from the template.

Drilling Holes through Round Stock

Every mechanic has more or less difficulty in drilling holes centrally in shafting and other round stock, the degree of trouble encountered depending upon the skill of the person doing the work. Even with an accurate layout and great care, the holes are frequently drilled off center.

The method illustrated makes it possible to bore one hole or a succession of holes in cylindrical work with the certainty that all of them will be at right angles to the axis of the work. Also, no layout is required unless a hole has to be a certain distance from the end of the work, in which case a scale can be used, or, where accuracy is required, a depth micrometer, by merely subtracting half the diameter of the bushing from the required dimension. The bushing is turned to exactly the same diameter as the work it is to be used with, and the central hole should be the same size as the one to be drilled in the work. The bushing and the job are then clamped in a vise, or, in cases where the work is too large, between parallels.
Straightening Damaged Clincher Rims

Clincher rims sometimes become dented and must be straightened to prevent injury to the tires. The rims can be straightened by means of a large pipe wrench. The rim or wheel is removed and placed on the floor and the pipe wrench applied to the dented spot so that the head of the wrench bears against the center of the rim, and the upper jaw presses outward against the dented portion as shown. The end of the wrench handle and the side of the rim farthest away from the wrench will then rest on the floor. By standing on the rim as indicated in the drawing the dent can readily be removed.—E. T. Gunderson, Jr., Humboldt, Iowa.

Ferrotyping Made Easy

Many commercial photographers ferrotype a great number of their prints to give them a glossy finish. This is usually done by laying the prints face downward upon the ferrotype plate and applying pressure with a hand roller, which is hard work and requires time and patience. A better method of doing this is shown in the photograph. An ordinary hand wringer, adjusted to give a slight pressure between the rollers, is used to do the work, the prints being laid face downward on the ferrotype plate and both run through the wringer. Buckling can be prevented by keeping the prints at least \( \frac{3}{8} \) in. from the edge of the plate.—J. G. Pratt, Washington, D. C.

Simple and Useful Clamp for Stepladder

A simple and useful clamp for the stepladder, that serves as a rest for holding windows while setting the panes or painting, can be made from two pieces of oak about \( 2 \frac{1}{2} \) ft. long, with a bolt passing through the center of both as shown; a wingnut is provided on the bolt. It is not necessary to remove the wingnut to attach the clamp. Merely push the clamp over one leg of the stepladder from the inside, and then over the other leg, after which the wingnut is tightened. This tool can be used equally well on a common ladder.—Edgar Wright, Brookfield, Mass.

Filling the Auto Vacuum Tank

If a funnel and small gasoline can are at hand, the simplest way to fill the automobile vacuum tank is to remove the plug at the top of the tank and pour in the gasoline. If no funnel is available, the best method of filling the tank quickly is as follows: Close the throttle and shut off the ignition, then press the starter switch. It may be necessary, with some starters, to switch on the ignition for a moment, in order that the starter gears may mesh. The action of the motor will then cause enough suction to draw the gasoline from the rear tank into the vacuum tank. The throttle must be kept closed, as otherwise the engine simply draws most of the air through the carburetor, and not enough through the vacuum tank.

When storing cement, never pile it directly on the ground, which always contains some moisture.
Building a Floor Crane

BY J. V. ROMIG

ONE of the handiest pieces of equipment for the small machine shop, garage, or service station is a portable floor crane, which can be rolled to any part of the shop to take the heavy lifts, and, when not in use, can be shoved out of the way.

A strong and serviceable floor crane can be made in any small shop or garage, at small cost for labor and material, and it will prove a paying investment. With this crane, heavy work may be raised from the floor to the bench or the tables of the various machines, shafts can quickly and easily be placed between the centers of the lathe, and, in the garage, engines can be lifted out of chassis, and run over to the repair bench or stand; in fact, the uses that can be found for the crane are "too numerous to mention."

The lower frame or base of the crane is made from two pieces of 5-in. channel iron, upon which are mounted two columns made of pipe. On top of the columns is the hoist arm, also of channel iron, and fitted with pulleys over which runs the hoisting chain or cable. A drum and a set of winch gears, with their shafts and bearings, are bolted to the columns. The base members are cut to a length of 62 in., laid out, and bent to the shape shown in the detail drawing; the bends are made at an angle of 45°, with the webs of the channels on the outside. The frame members are spaced apart by a piece of 3/8-in. boiler plate on the underside, and by the 4-in. pipe flanges used for the columns on top. The standard diameter of 4-in. extra-heavy pipe flanges is 10 in., so this will be the width of the length of boiler plate; the plate is cut long enough to project beyond the channels, to form a bearing for the back-caster pivot. Ball-bearing caster wheels are fitted to the three ends of the base as indicated, the caster at the back being provided with a forked handle or tongue, to enable the crane to be pulled about easily. The width of the front end of the base is 48 in., which enables it to be pushed between the wheels of an automobile of the standard 56-in. tread.

The columns are made of 4-in. extra-heavy pipe, and are fitted with flanges at both ends as shown. Both pipes should be cut and threaded so that, when the flanges are screwed home, the over-all length of the columns will be the same; they are bolted to the lower frame and hoist arm with 1/2-in. bolts, and must be perfectly square and parallel.

The arm or boom of the crane is also made of 5-in. channel irons, 48 in. long. They are spaced apart by pieces of pipe, faced on the ends perfectly square and to the same length, and held with 1/2-in. or 3/8-in. bolts. Two cable pulleys are placed within the arm at the points shown, before the arm is assembled. The pulleys run freely on plain 3/4-in. pins, held in place by heavy cotter pins, and they should be provided with oil cups, and be kept properly lubricated.

The hoisting mechanism consists of a cast-iron drum, mounted on a shaft carried in small pillow blocks on the columns. The bases of the pillow blocks should be machined to fit the curvature of the columns, or, if there is not metal enough in them for this, small plates, curved on one side to fit the columns, and flat on the other, should be used between the blocks and columns. The drum shaft carries a 12 or 14-in. gear at one end, meshing with a 3 or 4-in. gear carried on a shaft above the drum. This shaft is also carried in pillow blocks, fitted as before, and is provided with a strong crank handle. The assembly is bolted to the columns, with 1/2-in. through bolts, at a convenient operating height, the pillow blocks being spaced so that the gears will mesh with the minimum of backlash, while still running free. A bent bracket made of 3/8-in. steel plate, is bolted to the back of one of the columns, and carries a pawl which engages with the large gear, and holds the load when hoisted.

Either a cable or chain may be used; if a cable, it should be of plow steel, not less than 3/8 in. in diameter, and if a chain is used, it should be strong enough to sustain a load of at least 800 pounds.

Most of the material for this exceedingly useful tool can be picked up at a junk dealer's for a few cents a pound; the work of cutting and assembling is quite simple, and may be done in the men's spare time, if necessary.

Cement for Auto-Top Repairs

Many autoists repair a torn top with a piece of rubberized fabric and tube cement; it is found, however, that the cement deteriorates in time under exposure to weather. By substituting shellac for the cement, the repair can be made practically permanent. The portion of the top to be covered should be cleaned thoroughly, and the shellac should be spread so that there will be no spaces under the edges.
A Floor Crane That may be Constructed of Material Found in Any Junk Yard, and That will Very Quickly Pay for the Time Spent in Making It, by the Time Saved When Heavy Work must be Lifted
Turning Hard Rubber

Anyone who has had experience in turning hard rubber, ebonite, and bakelite, knows how difficult it is to keep the edges on the steel tools, and to produce a finely burnished surface. The tool dulls rapidly, and drags the surface of the material, so that the work presents a ragged appearance.

The difficulty can be avoided to a great extent by using a small piece of plate glass as a cutting tool; this has been found to give excellent results, both in cutting and in surfaced the work. The piece of glass is clamped in a toolholder of the design illustrated in the upper detail. The cutting edge is obtained by fracturing the glass; when this is dull a new break is made. Pieces of heavy glass broken from bottles can also be used but cannot be held so easily in the toolholder.

Convenient Arrangement for Test Leads

There are usually two pairs of test leads on the workbench of an electric repair shop; one pair is connected in series with a lamp, and the other pair tapped directly to the line, to obtain full-line voltage when testing small motors and heating appliances. A very simple method of obtaining the same result with one pair of test leads is shown in the illustration.

A double-pole, double-throw knife switch is used. One of the center terminals is connected to the positive line, and the other to the test lead. The two terminals on one side of the switch are connected to a lamp, and those on the other side are short-circuited. The other test lead is tapped directly to the negative line. By throwing in the switch on one side, the lamp is put in series with the test leads; by throwing it in on the other side, as shown in the illustration, the full-line voltage is obtained. When the switch is open, the positive lead is dead.

Marking Celluloid

A simple and effective method of marking one's name on any celluloid article, such as a draftsman's triangle, is to letter the name neatly on the surface of the celluloid with black drawing ink, and then, after inverting the triangle, to focus the sun rays with a reading glass on the written portion. After this is done the ink is washed off and a neat replica of the writing will be left on the celluloid surface.—O. S. Sawn, Worcester, Mass.

Corner Studs for Frame Houses

The large cracks appearing in the plaster at the corners of the walls of frame houses are very often due to the fact that the corners are not well made, properly braced, or strong enough.

For the sake of economy it is common practice to use two 2 by 4-in. studs, arranged as shown in Fig. 1, with two small lathing strips nailed at the inside corner of the inner stud. Another poor method is shown in Fig. 2, in which the corner studs are placed so that the edges butt together with a 4 by 4-in. space in the corner between the studs and the sheathing. Fig. 3 shows a good construction of a corner, using three 2 by 4-in. studs. The center stud, spiked firmly between the other two, projects about 1/8 of its width so that the lath can be nailed to it, or a 2 by 6-in. piece of
timber may be used for the center member. This construction is about twice as strong as either of the two shown in Figs. 1 and 2, and only one extra stud for each corner is required. Strength should always be insisted upon in the details of frame houses, especially when the additional cost is slight.—John N. Sioussa, Washington, D. C.

Adjustable Universal Chuck

The illustration shows how a universal chuck may be fitted to act as an independent chuck, and, within limits, as an eccentric chuck; this method may also be used as a means of adjustment for a chuck out of true. A plain cast-iron faceplate, with a heavy flange, is screwed to the spindle nose and trued in the usual manner. Holes are drilled, or, better, slots cut through it for the studs that hold the chuck; if holes are used, they are made a little larger in diameter than the bolts, to allow the chuck to be moved across the faceplate. An auxiliary faceplate is then made up, as shown, and recessed to fit the smaller one; 3 or 4 holes are drilled and tapped in the periphery, to fit safety setscrews tightening against the smaller plate. The auxiliary faceplate is also provided with a shallow boss, which is made a push fit in the chuck counterbore.

To center the work held in the chuck, or to set it eccentrically, the nuts on the studs holding the chuck and auxiliary faceplate are loosened slightly, and the setscrews adjusted until the work runs true; the nuts are then tightened. In case the lathe nose becomes inaccurate, the auxiliary plate and chuck are removed, and the smaller plate faced true; the chuck is then replaced and adjusted by means of an indicator.

A good liquid tire paint is made by mixing 5 lb. whiting in 1 qt. gasoline, and, when thoroughly mixed, adding 1 qt. rubber cement. It is applied to the tire with a brush, and will not crack or chip, due to the elasticity of the rubber cement.

Working on Side of Building

The method of working on the wall of a building as shown in the illustration is used by circus-bill posters to put up their signs in places that are otherwise nearly inaccessible. Two ladders are used; one is laid on the roof, and projects a few feet beyond the edge; the other is lashed to the projecting end, and hangs vertically. One man remains on the extreme inner end of the horizontal ladder, while another climbs down the vertical ladder, the weight of the first man keeping the whole arrangement in position. The horizontal ladder should not project over the edge of the roof more than $\frac{1}{4}$ or $\frac{1}{3}$ of the entire length of this ladder and the man holding it down must apply his weight at the extreme inner end; he must be about equal to the other man in weight. In this way he will be able to hold the man on the ladder securely.

Painting Inside of Conductor Piping

Conductor piping rusts much more rapidly than the gutters, and for this reason it should be painted on the inside, which will protect it for a long time. The painting can conveniently be done by means of a sponge drawn up through the piping on a length of rope or heavy twine. The rope should be long enough to extend up through the inside of the piping and down to the ground on the outside, so that, when the rope has once been passed through the pipe, the remainder of the work can be done from below. A large sponge is tied to the rope and a weight tied under the sponge.
Carrying Sheet Metal

Where pieces of sheet metal have to be carried for short distances by hand, the device shown in the illustration will be found useful. For a handle, a short piece of round stock is used; this is slotted at one end to take a piece of flat steel with a slot sawed in it to take the work. Both parts of the tool are held together by means of a pin. The end of the handle projecting over the slot in the flat piece is filed to the shape shown to form a cam. The handle will, when pulled upward, hold the sheet securely in the slot, and the weight of the material will also tend to tighten the grip of the holder. In use, the sheet is gripped so that the handle projects away from the workman. When carried in this manner the sheet swings slightly away from the worker's feet and clears the floor much better than if carried straight.

Lubricating Automobile Springs

Authorities on automobile maintenance agree that graphite is by far the best spring lubricant. Many motorists, however, refrain from using graphite because of the difficulty of getting it between the springs without taking the springs apart. A very simple and easy method of efficiently lubricating automobile springs with graphite is as follows:

Take about 2 oz. of powdered graphite and mix it in 4 oz. of ordinary commercial ether. Put the mixture into an oil can and apply it to the springs; it will be found to flow readily between the tightest leaves. The ether evaporates quickly and leaves behind a deposit of graphite. The graphite left on the outside of the springs may be wiped off with a cloth.

Since ether is poisonous if taken internally, it should be mixed and applied to the springs out in the fresh air where there is not the slightest danger of inhaling it. It is also highly inflammable, and care should be taken to keep it away from fire.

One-Piece Chimney-Extension Cap

The drawing shows a one-piece chimney-extension cap that may be cut with little or no waste from a sheet of galvanized iron. The method of cutting is shown in the upper left-hand detail. The cylindrical part is first formed and the edges carefully seamed. The top flaps are then bent over, seamed and soldered, which completes the cap. If it is not thought necessary to have both sides exactly symmetrical, the extra allowance on the sides of the body for seaming may be omitted, and the sheet cut straight as indicated by the dotted lines. When the body is seamed, the upper curve on one side will be a little smaller than that on the other, but this is hardly noticeable, and allows the sheet to be cut with no waste at all. The cap not only forms a protection over the chimney, but also tends to increase the draft. — Francis T. Griffin, North Bend, Neb.

When broaching, see that all chips are removed before placing a new piece of work on the broach.
THE band saw shown in the accompanying drawing is built up mainly from the most easily obtained of materials—pipe and fittings; it will be found a most practical tool for the small shop, and one capable of heavy work.

The method of assembling the 2½-in. pipe frame is quite apparent from the drawing, so nothing need be said about this. The bearing for the bottom-pulley shaft is a babbitted cross, reamed to fit a 1½-in. cold-rolled steel shaft; an oil hole is drilled and tapped in the side of the cross, at the top, and an oil cup fitted this keeps the bearing in alignment. A 5-in. circular adjusting nut, tapped to fit the bar, is run on between tee and cross before the bearing is assembled; this nut has eight 3/8-in. holes drilled around its circumference for a spanner wrench. If a bar of the proper size is not available, the sliding piece may be made of double extra-heavy pipe, turned to size. Care must be taken, when assembling the frame, to get the upper and lower bearings in line, and square with each other. The thrust plate is made from 2-in. cold-rolled steel, turned to shape, bored to fit a 3/4-in. pin, and casehardened.

to lubricate the shaft. The top-pulley shaft bearing is a tee, babbitted and reamed, in the same manner as the lower bearing, for a 1½-in. pin. This bearing is made adjustable, as shown in the sectional drawing, by screwing a 3-in. bar, with a long thread, into the tee outlet. The bar slides in one pair of the outlets of a 2½-in. cross, the outlets being machined to a good fit on the bar. A ½-in. pin is riveted through the cross, and fits in a slot cut through the bar;

The pin has a groove turned in it near its end, and a 3/8-in. pin, driven through holes bored in the thrust plate, runs in the groove and keeps the plate in place. The pin is carried by a 1-in. square bar, which runs through a babbitted hole in the end tee of the frame, and is held by a 5/8-in. setscrew with a large knurled head; the ¾-in. thrust-plate pin is held by a ½-in. thumbscrew.

The table is made of 1-in. hardwood; it rests, at the front, on a pipe flange.
screwed on the frame member, and, at the rear, is screwed to a 2 by 2-in. angle iron, which is fastened to the frame by a U-bolt.

The saw pulleys should be 3/4-in. face by 12-in. diameter, and should be turned and balanced to insure vibrationless running. It is advisable to cement endless rubber bands to the pulleys, to prevent the saw from slipping and heating. The driving pulley should have a 2 1/4-in. face, and be of such a diameter that the saw pulleys will run at 500 to 600 r. p. m. Saw pulleys up to 15 in. in diameter can be used by proportioning the frame to suit. A 3/8-in. saw will be found to be the best size for all-around woodworking. The feet of the machine are pipe flanges, and lag screws, or bolts, are used to fasten it to the bench.

---

Assembly Stand for Automobile Axles

To allow the workman full use of both hands in assembling the front axles of automobiles, the simple stand shown in the photograph was devised. The spring-perch holes in the axle slip over two studs on two separate stands; then the workman can perform the necessary operations, knowing that the axle is just as rigid as if it were actually fastened to the automobile.—J. H. Moore, Toronto, Canada.

---

Protecting Drawings

Ordinary transparent lacquer used for coating brass and other metals can also be applied to paper reference sheets, tables, drawings, etc., to protect them from being soiled by handling. The lacquer is poured into a shallow tray, and the sheets are dipped so that both sides are thoroughly coated, then hung up to dry. If desired, another coating can be applied after the first has dried. The lacquer covers the paper without affecting the printed matter, and it toughens and glazes the surface so that it will not collect dirt so quickly. It also prevents the paper from being stained or torn easily.

---

A Lathe Test Piece

When mounting a lathe job that is to run perfectly straight and true the alinement of the centers should be carefully checked. This is often done by running the centers together, or by using a thread gauge with male and female 60° angles, but these methods are not very accurate; it is better to use a test piece of the type illustrated. This consists of a 10-in. length of 1-in. tubing, fitting snugly into two steel end-pieces, as shown. These endpieces are a driving fit over the tubing and are ground down after being assembled, the centers being carefully machined with a single-edge tool while running the test piece in the chuck and steady rest. The sides of the endpieces are also trued. As the head center rotates, it is always well to run the lathe, and to hold the test piece by hand in order to keep it from rotating. A dial indicator is brought to bear on the side of one endpiece, as shown, and after registering the position of the needle, the dial is moved over to the other end, which is similarly checked; the dial needle will check alike at both ends if the centers are in perfect line. By using a test piece of this kind, considerable guesswork will be eliminated, and the accuracy of the job assured.—J. V. Romig, Allentown, Pa.
Locking Door-Knob Screws

The small setscrew used to hold a door knob in place on the lock shank often works loose and is lost. Although replacement of a few screws is not expensive, it is troublesome, and in large buildings, where this trouble happens often, it is advisable to prevent frequent recurrence by placing small lock washers under the heads of the screws.

Safety Gauge for Punch Press

It frequently happens that a punch-press operator places two blanks into the forming die instead of one, the result being that either the die or the press is broken. This accident usually occurs when blanks are stuck together with a layer of oil, and the double thickness is not readily noticed. Furthermore, piece-work rates, which are usually paid for press work, are not generally conducive to giving the work close inspection.

To avoid the danger of breaking dies and presses in this way, I designed an adjustable safety gauge that is bolted on the punch-press table in a position convenient to the operator, who passes each blank between the measuring anvils before placing it in the forming die. The anvils are spaced to allow the passage of only one blank. Although the use of the gauge slows up production somewhat, not so much time is lost as when dies and presses are laid up for repairs. The elimination of repair costs also enables the firm to raise piece-work rates.

The gauge has a flat cast-iron base, with lugs for bolts. Both measuring anvils have round faces to permit the easy passage of the blanks. The anvils are made of tool steel, hardened, and the upper one is threaded and provided with a locknut.—Chas. Homewood, Ontario, California.

Tool for Handling Light Work

A piece of wire bent to a U-shape is often used to hold light tubular work for minor operations, such as dipping, tinning, etc., where the full outside surface must be exposed. The illustration shows an improvement on this type of holder. The improvement consists in the addition of two disks, each flattened on the edge and drilled in the center to fit the wire; the ends of the wire are bent, pushed through the holes, and bent again, so that the disks are free to revolve, but cannot come off. The flattened sides of the disks make a much better contact with the work than wire alone, and one tool of this kind will serve for many sizes of work, while, when using the U-shaped wire only, several different sizes must be made to handle any large variety.—Harry Moore, Montreal, Can.

Removing Large Scrap Casings from Rims

To remove a scrap 40 by 8-in. casing from the rim in a short time, cut into the tire from the outer side, about 2 in. above the bead. Cut at an angle through the rubber and through the cords and keep on cutting all the way around the tire. The outer sidewall can then easily be pulled out to remove the inner tube and the flap, after which the casing can be taken off the rim without much trouble. This process takes about 30 minutes, while the ordinary method often takes from 2 to 5 hours.—Harold L. Fox, Atlantic City, N. J.
Tapping Round Work

It is usually more difficult to keep a tap straight and square on round work than on flat work, as there is nothing to guide the eye. The illustration shows a tap guide, made of flat stock, that aids in tapping holes straight in such work. One piece is bent at right angles on two sides, drilled with a clearance hole for the tap in the center, and a slot is sawed up each side. The second piece is made to slide up and down in the slots; the center is cut to a V-shape, and the ends are turned over to bear against the sides of the first piece so that both parts are held in line by the spring effect. To use the device as a guide it is slipped over the work and the sliding piece pushed up until the V-shaped point enters the bottom of the hole to be tapped. This movement centers the clearance hole in the top over the hole in the work, and brings the upper surface to a square position so that the tap can be guided straight with the eye. If greater accuracy is desired, a square can be used, with the stock resting on the flat upper surface of the guide.

Testing Silk

Silk fabrics are often "loaded" to give them the appearance and feel of heavy fabric, because a loaded silk is cheaper to produce than a piece of goods that is made entirely of silk and is of the same weight. The loading process generally consists in impregnating the silk with metallic salts, such as tin and lead. A chemical action is set up in the fiber by this process which weakens the goods to some extent; furthermore, when the loading materials have been removed from the fabric by washing, the garment is in many cases practically ruined. Loading also causes the silks to crack and split at folds and creases.

A simple method of detecting silks that have been treated with metallic salts is a burning test. A piece of pure silk, when burned, will shrivel up into a bunch in the same way as wool. If metallic salts are used, the silk will not shrivel up, but the ash will retain its original shape and pattern, and can often be handled without breaking, depending on the amount of loading that has been done.

Handy Fish-Wire Puller

It is a very tiresome job to pull fish wire through conduit by means of pliers, and it is not advisable to wrap it around a stick, as this is liable to ruin it. A puller of the type illustrated has therefore been found of considerable convenience; the harder one pulls on it the tighter it will grip the wire without injuring it, whether the wire is flat or round.

The handles are cut from pieces of wood about 2 in. square and 12 in. long. Part of each handle is rounded off to make a comfortable grip for the hand, and the square ends of the handles are slotted to receive a strip of flat iron, which acts as a hinge. Pieces of angle iron with slots cut across them to correspond with those cut in the handles, are fastened to the ends by means of flat-head wood screws, the sharp corners or edges of the angles being slightly rounded with a file, so that they will not cut the fish wire. A small piece of flat iron is screwed to each side of the handles to take the strain off the hinge, which is held by two stove bolts passing through the handles as shown.—W. W. Parker, Lead, S. D.

All open flames should be kept away from any place where there is any possibility of acetylene escaping.
A Good Wire-Fence Straightener
BY J. R. KOONTZ

EVERY farm and ranch owner, in fact anyone who has occasion to use wire fencing, knows how soon it is bent and forced out of shape by horses, hogs, and cattle tramping or crowding it down in order to get grass, etc., that may be on the opposite side. In a short time the fence becomes unsightly, and if allowed to stay without straightening will become more of a nuisance than anything else.

The wires can be straightened with the hands, but, with heavy wire it is a difficult job, and painful to the hands, and, when much of it must be done, the enforced bending causes a pain in the back. With a wire straightener these aches and pains may be avoided, and the fence straightened much easier, thus transforming a difficult job, and one that is put off as long as possible, into an easy one.

A straightener of the type shown in the illustration can be made at practically no cost, beyond that of the labor, from materials usually to be found in the junk heap. Two handles, taken from an old plow or cultivator, are used, or, if only a single-hook tool is desired, the handle of a discarded lawn mower will serve. The handles are cut to 30 in. long; two round braces or struts, 10 in. long, which may be taken from an old chair; two pieces of flat tire iron, 20 in. long, and two pieces of tire iron 10 in. long, are also necessary, in addition to eight wood screws and one iron rivet.

A hook is bent on one end of each of the 10-in. irons, and two screw holes are drilled in each, so that they can be fastened to the lower ends of the handles as shown. Screw holes are also drilled at the ends of the 20-in. pieces, and a hole for the rivet in the center of each. Holes are bored in the handles for the ends of the chair rails, which are then glued in place between the handles. The 20-in. cross braces may then be attached, and riveted together.

In using the tool, the hooks are placed over the line wires, the foot placed against the stay wire, and the line wire pulled back into shape without stooping.

Coloring Copper Brown and Black

Different shades on copper, ranging from a light brown to a deep black, may be obtained by using a weak solution of liver of sulphur. A half ounce of the liver of sulphur to a gallon of water is sufficient to make a solution strong enough for the brown colors. By increasing the quantity of the chemical, using the same amount of water, and bringing it to the boiling point, the same colors can be produced on brass.

To obtain the popular verd-antique finish, the work is stippled with a solution made from 4 oz. copper nitrate, 4 oz. calcium chloride, and 1 oz. bichromate of soda in 1 gal. of water. After coating the work with this solution, the high lights are rubbed down with a cloth and finely powdered pumice stone, after which lacquer or wax is applied as desired.

Drilling Hardened Steel

I have found the following method for drilling hardened steel very satisfactory. The usual pointed end of the drill is ground to a half-round shape, then made as hard as possible. The surface to be drilled is etched with dilute muriatic acid. Instead of oil, turpentine or kerosene in which a little gum camphor has been dissolved is used as a lubricant. Should the bottom of the hole become polished, so that the drill rides over it, remove the drill, etch the bottom of the hole with the acid, to roughen it, and proceed as before.

—Wm. J. Edmonds, Rutland, Vt.
Auto Upholsterer's Stuffing Tool

It is common practice among automobile upholsterers, when filling pleated seat backs, to lay in a roll of wadding and sew the covering over it as they go. The process, which is a slow one, may be greatly facilitated by the simple stuffing tool illustrated, which permits the pleats to be sewed first and stuffed afterward.

The tool consists of two strips of sheet iron 31 in. in length; the width at one end is 5 in., for a length of about 2 in., and the remainder of the strip is 4 in. wide. The edges are bent over as shown to form flanges, then the flanges are cut off at one end of each piece, and the strips bent over to form handles, which are stiffened with ridges of solder. At the wide end of the tool, the flanges of one section are bent outward and those of the other section inward so that one may slide within the other. In use, the roll of stuffing is placed in the tool and slipped inside the pleat. By pulling the outer section back 2 in., the locking portions of the flanges slide clear, and the tool can be removed without difficulty.

Instructions Cast on Machines

On many machines it is necessary to attach a plate of instructions or warning so that they can be operated safely. Enamelled plates are often used, but are not satisfactory because the enamel splinters. Etched and engraved brass plates give satisfactory service, but, as they are detachable, are often lost. The most permanent method of providing instructions is to cast the lettering on the frame. This is done by embossing the desired lettering on narrow aluminum strips and nailing these to the surface of the pattern. The location is determined simply by reference to the parting of the mold, so that the lettering will not be obliterated in the molding process. The finished casting is ground to even up the tops of the letters and make them conspicuous.

Identifying Scaffold Lumber

Many contractors, and others having use for scaffolds at regular intervals, use special lumber for the purpose, particularly for the footboards. The material is generally 2-in. lumber and is selected for its freedom from knots and other defects. The ends of these boards are painted a conspicuous color so that they can readily be identified in a pile of lumber, should they get misplaced, but they are usually kept in a separate pile.

Smokestack Made from Old Kitchen Boilers

When installing a new furnace it was learned that the 40-ft. smokestack which was required would cost approximately $40.00. Instead of paying this price, eight old kitchen boilers were bought for 50 cents each at a scrap yard. The ends were cut off with an acetylene torch in an hour's time and the small openings in the sides were plugged. One end of each tube was hammered down so that it would fit into the end of another section, and the sections riveted and welded to each other. The smokestack made of these boilers was heavier than one made of the usual material, not to speak of the saving in cost effected in this way.

J. E. Holstrom, Knoxville, Tenn.
Making a Beam Micrometer

The cost of a complete set of micrometer calipers prohibits the average toolmaker or machinist from owning one; a beam micrometer also, while not so expensive as a complete set, is beyond the reach of many. With the exercise of a little skill, however, accurate beam micrometers may readily be made by the workman himself.

The toolmaker, and others whose work demands an accurate tool, will find the micrometer shown in the larger drawing well worth making, as it can be made just as accurate as any of the high-priced tools on the market.

The beam or frame is made of \( \frac{3}{4} \) in. steel, 9\( \frac{1}{2} \) in. long and 5 or 6 in. wide, depending upon how high it is desired to make the spindle and anvil. This height should be either 3 or 4 in., and the width of the beam 1\( \frac{1}{2} \) in. The inner edges of the foot and beam must be absolutely true and square with each other, if the tool is to be accurate, and great care must be taken with this part of the work. The foot is drilled for the anvil, which is of tool steel, made, as shown in the sectional detail, with a ball-shaped end and a shank smaller in diameter than the hole. This allows the inner face of the anvil to seat squarely against the surface of the foot; the ball must be a tight press fit.

The micrometer-head standard is built up of flat steel, the upper part, carrying the head, being shaped from \( \frac{3}{8} \) in. stock, leaving the diameter of the eye \( \frac{1}{2} \) in., and the body \( \frac{3}{4} \) in. thick. This is connected to the bottom piece by \( \frac{1}{8} \) in. side plates, the whole being assembled tightly by perfect-fitting rivets, neatly headed. A clearance slot is filed in the bottom surface of the upper part of the standard, so that it has a two-point bearing on the beam.

The locating spring tooth is made of tool steel, hardened and tempered, and is fastened to the bottom piece by a round-head screw. The shape of the notches in which the tooth rests should be particularly noticed. This form of notch divides the work of locating the standard and of drawing it to position. When the screw is turned upward to press the tooth home, the inclined side of the notch, engaging with the corresponding side of the tooth, slides the standard until the straight sides of notch and tooth are in contact. It is only necessary to make the straight sides of the notches accurate as to location, and, as all of the wear comes on the inclined side, this accuracy is retained indefinitely. When the screw is released, the tooth will spring out of the notch with a little end pressure. The micrometer head is lightly pressed into the eye in the standard in the usual manner, and the contact surfaces of the anvil and spindle lapped true.

Where extreme accuracy is not essential, a micrometer head, attached by means of a simple bracket, or auxiliary head, to the scale of a combination square, will serve the purpose, the head of the scale being used as the anvil. It is preferable to use a square with a hardened, drop-forged steel head.

The auxiliary head is made from a piece of cast iron or steel, \( \frac{1}{2} \) by 1 by 4 in. in dimensions, machined all over by the size given in the smaller drawing. A hole to fit a standard micrometer head is then drilled through it, and, at right angles to this, a hole is drilled and tapped for a binding screw, the head slotted as shown, and one side of the binding-screw hole drilled out to fit the body of the screw; the screw used has a knurled head. The bottom of the head is now slotted to fit nicely on the scale, holes for two small setscrews are drilled and tapped in one side, in line with the scale groove, and the screws fitted.

To use the tool, the square head is set on a scale division, and, with the microm-
eter reading at zero, the auxiliary head is moved up, until the end of the spindle just touches the square head, and locked in position. The square head is then moved the desired number of divisions, locked, and the micrometer used as usual. When setting the head on the scale divisions, a magnifying glass should be used.

A better way to set the tool is to use a set of the micrometer standards sold by various tool companies, but where these are not available, the magnifying glass will enable the workman to set the tool as closely as the ordinary vernier caliper may be adjusted. A tool of this kind has been used for a long time, and has given splendid service.

Wire Gauge Attachment for Plates

Steel and iron plates are very seldom accurate as to thickness at their edges. Sometimes this is caused by the shear turning up the edges, by a saw, which leaves a burr, or perhaps the edges are just badly knocked. For this reason a wire gauge, when used to measure plates, is often unreliable, and the cause of many mistakes, because the actual thickness of the plate may be less than that shown by the gauge. To measure plates accurately they should be gauged at a short distance from their edges. The attachment shown in the illustration accomplishes this in a handy manner when used in conjunction with a wire gauge.

A collar, about \( \frac{3}{8} \) in. thick, makes a good body for the device. A hole, about \( \frac{1}{4} \) in. in diameter, is drilled through it, and it is then cut in two as shown. A piece of drill rod is driven tightly into the hole in one part, and made a sliding fit in the hole in the other. The faces of both halves are then brought together and filed and lapped true to each other. Two pieces of \( \frac{1}{8} \)-in. sheet steel are bent over to fit the two pieces at one side, and are riveted in place by a couple of pins in each, the faces of the collar pieces at this side being cut away to clear the gauge. To keep the two parts together a small pin is driven through the drill rod, and a shallow groove is filed in the top of the collar in line with the pin, so that the pressure of a light spring around the rod keeps the pin in the groove and prevents the two parts from coming apart when not in use. Any size of plate, from \( \frac{1}{64} \) in. thick, can be measured with this device, as shown in the drawing; it is recommended that the gauge and attachment be fastened together by means of a short chain, if constantly in use.

Economizing on Cropping Blocks

It is a general practice in steel manufacturing plants to crop bars of steel before straightening them. This is done on a cast-steel cropping block, and when the edge of the block becomes rounded or chipped, which is caused by heavy cropping, the block is machined down to form a new edge.

An improvement on the ordinary block is made by rabbing the edge of the block as shown, to a depth of \( 2\frac{1}{2} \) in. and a width of \( \frac{3}{4} \) in., to form a seat for a removable tool-steel blade which is bolted to the block. The four edges of this blade can be used, and, when the last edge is worn, a new blade can be substituted for the old one. The holes in the blades and the block are drilled 2 in. from each end, and exactly on the center, so that the blade will fit the block and holes exactly in either position. The steel used for the blade should be 80-point carbon tool steel, with a Brinell hardness of 477.

[To evaporate 1 cu. ft. of water requires the consumption of 7\( \frac{1}{2} \) lb. of coal, or about 1 lb. of coal to 1 gal. of water.]
An Electrically Driven Hedge Trimmer

BY A. E. SHAW

A MACHINE that will interest the man who prides himself on his well-kept grounds is the electric hedge trimmer shown in the illustration. There is no great amount of skill required to build the machine beyond that possessed by the average amateur mechanic, and, besides trimming the hedge very accurately and uniformly, the machine does the work in a much shorter time than it can be done by hand.

The base of the machine is made of 1-in. lumber, which is faced on the edges with ¾ by 1-in. flat iron. The iron is extended at the front as shown, to form a bearing for the front wheel. The rear-wheel axle is strapped to the underside of the base; the wheels are 12 in. in diameter, rubber-tired.

The supporting frame for the motor is made up from ¾-in. pipe and fittings, the vertical arms being attached to the base by means of floor flanges. The cross arm is fitted with a cross and a tee, from which the threads have been filed so that they will slide easily on the vertical pipes, and they are fitted with setscrews so that the arm can be locked in position.
A coupling, tapped for a setscrew, is screwed on the outer end of the arm, and a smaller pipe is telescoped within it. This pipe is threaded at the outer end, or fitted with a reducing coupling and nipple, to screw into the base of the motor. The size of this pipe and the thread used will depend on the motor available. For trimming the top of the hedge, the motor is mounted at right angles to the cross arm, the elbow shown being used for this purpose.

The motor is a small battery motor, which develops about \( \frac{1}{15} \) hp. at 1,800 r. p. m., on 6 volts, and it is fitted with a tool-steel blade, ground to the shape and dimensions given in the drawings, and carried on the motor shaft by means of a machine-steel flange, drilled and tapped for two round-head screws and a setscrew.

It has been found convenient to drive the outfit by a storage battery mounted on the base, but it is perfectly feasible to use a 110-volt motor, provided a connection can conveniently be made. When the motor is not in use it is removed, with its supporting pipe, and carried in the bracket screwed to the front of the battery box.

The handle of the machine is made of \( \frac{3}{4} \)-in. pipe and fittings, the lower end of each leg being flattened and screwed to the base, and each leg is attached also to the side of the battery box with pipe straps.

---

**Improvements for a Fishing Boat**

A tackle box fitted in the seat of a rowboat has many advantages over an ordinary tackle box, as it has not only much more room and cannot be knocked around, but is kept completely out of the way. As shown in the drawing, the tackle box is made in the form of a drawer under the center seat, the one that is usually used the most. The drawer is about 30 in. long, 6\( \frac{1}{2} \) in. deep, and 12 in. wide, which gives plenty of room for two or three rods, and compartments for hooks and lures, so that these will not become mixed, as is generally the case in the ordinary tackle box. The box is protected from rain by the seat, and as it does not touch the bottom it is also free from water in the boat. A hasp and padlock should be provided on the box.

Another improvement for the boat is a slat flooring to prevent getting the feet wet. For convenience the flooring can be arranged in three sections. The construction is simple, all that is necessary being a quantity of slats and a few cross members. The best wood to use is fir, and the flooring should never be painted, but should be given a liberal application of linseed oil. The slats, so protected, will last a long time. In addition to keeping the feet dry, the slat flooring protects the bottom boards of the boat.

---

**Simple Homemade Leaf Spreader**

To lubricate the springs of an automobile properly it is necessary to loosen the clips and spread the leaves apart for the insertion of the lubricant. There are many methods of doing this, but the tool shown in the sketch will do the work with a minimum of effort. It is made from two pieces of a broken spring, bent as shown. The ends are ground to a knife-edge for wedging between the leaves; by tightening up the nut in the bolt the knife-edges are drawn together, separating the spring leaves. The bolt holes must be elongated to prevent the bolt from binding.

By fixing an 18 or 20-in. extension to his cane, a blind man has greatly increased its usefulness. Because of the increased length he is able to notice obstacles within a much greater radius.
Inexpensive Book Ends

A neat pair of ornamental book ends, which are just as presentable in appearance as many of the expensive ones on the market, can easily be made at home for a fraction of the cost of the manufactured article.

The wooden base and vertical part of each end are cut from 1 by 5-in. finished lumber, to the shape shown in the details of the photograph. The two parts are joined with 2-in. wood screws, small holes being drilled to prevent the screws from splitting the wood. Two small celluloid statuettes, such as elephants, which cost only 10 or 25 cents each, are obtained. The statuettes are attached by cutting off the bottom of the feet and gluing wooden plugs inside. Screws are driven up through the base into the plugs to hold the statuettes in place, the screw-holes in the base being counterbored to receive the screw heads. The underside of the base is covered with a piece of felt, which is glued on. The felt should project about 1½ in. beyond the vertical part of the book end; the outer book rests on this, and prevents the book end from moving. The wooden part of the book end is enameled to match the statuette, or both base and statuette may be finished in any other desirable way.—Glen McWilliams, Detroit, Mich.

The Bureau of Information will tell readers where materials mentioned in the Shop Notes and Amateur Mechanics departments may be obtained.

Time Exposure with Hand Camera

Tripods are more or less of an annoyance to the camera enthusiast, and few use them. However, it is sometimes nec-

Simple Methods of Making Time Exposures without Using a Tripod

essary to make a time exposure to get the desired picture, but the camera cannot be held steadily enough with the hands to avoid doubling the image. It is, however, a simple matter to hold the camera steady if a cane is carried along. Just below the crook of the cane two holes are drilled from opposite sides to meet in the center, both slanting down from the point of junction. Another hole is drilled through the crook to take a tripod screw, on which the camera is mounted. A cord is run through the angular hole, the ends of the cord are stepped on, and pulled taut by pulling back on the cane, which has the end planted on the ground in the position indicated, thereby holding the cane firmly in position. The arrangement thus improvised is steady enough for long-time exposures.

Another method of steadying the camera is to cut a length of tape into three pieces, and to tie or sew these pieces together at the central point as shown, making a form of the letter Y. Loops are made at the ends so that the foot can be placed in one loop, and each wrist in another. Then, with the camera clasped between both hands, an upward pull will enable the user to hold the camera steadily enough for a time exposure of four or five minutes.—George Parke, Chicago, Ill.
"Anchoring" the Cow's Tail

Anyone who has milked cows has suffered from the annoyance caused by the animal switching its tail around to chase away the flies. This trouble can be prevented very easily if there is an old bicycle tire lying around the yard. The tire is simply thrown over the cow's back as shown. This idea has been tried and found very effective.—F. H. Chick & Co., Strong, Me.

Novel Mounting for Spider-Web Coil

A simple and effective method of tapping a spider-web coil is shown in the drawing. The coil is wound on a wooden or fiber disk, ¼ in. thick. Each section is tapped as usual, and the taps are connected to small round-head brass screws, driven into holes, drilled and tapped in the edge of the disk. The coil is then mounted on a long screw, to which is attached the knob and dial used for revolving the coil. A nut is run onto the screw, on each side of the disk, to hold it securely in place, and the end is filed down to fit a bearing made of sheet brass. The aerial end of the coil is fastened under one of the nuts, and the lead-in wire from the aerial is connected to the bearing. A flat copper or brass spring, connected to the ground, is fastened underneath the disk, so that the brass screws all come in contact with it in turn as the coil is revolved. This arrangement permits the use of a greater number of switch points than with the usual spider-web coil.—C. Wright Richell, Columbus, Ohio.

"The Kettle's Boiling"

A warning signal for a water kettle, indicating that the water is boiling, can be made from an ordinary flat tin whistle, soldered into a hole cut in the kettle lid. A little steam or vapor passing through the whistle will not cause it to sound, but when the boiling point is reached, so much steam is generated that the whistle is blown loudly. The housewife can put the kettle on and go about her work, confident that she will not forget it.—Wm. E. King, Monessen, Pa.

Ornamenting Cement Tile

Designs on the face of cement tiles, or other cement work, such as panels, can easily be made without the necessity of making wooden forms. Frequently, when wooden forms are used, and the cavities later filled with colored cement, the design appears very awkward, owing to the difficulty of forming the design in wood smoothly. The idea illustrated involves the use of a piece of a heavy waterproof-paper or sheet-metal stencil. In use the stencil is placed on the soft cement and the colored aggregate is pressed through it. A similar effect can also be obtained by dusting on dry cement color, but this is not so satisfactory, as it is not permanent. If the stencil is built up of several thicknesses of paper, a colored cement mixture can be used that will stand out in slight relief beyond the surface of the work when the stencil has been removed.
Saving Theater-Sign Lamps

Many theaters are closed for the summer months, and during this time the electric signs are not used. The lamps left on the signs accumulate dust and dirt, and some are usually broken, which gives the sign a very dilapidated appearance. To prevent this, it is advisable to remove the lamps as soon as the season is over. Removing the lamps leaves the receptacles open to catch dirt, but this can be overcome by screwing corks of the proper size into the receptacles in place of the lamps. The appearance of the corks is improved by painting them with a contrasting color.

Using a Gas Heater as a Stove

The cooking arrangement shown in the illustration has been found of considerable convenience in a room where a regular stove cannot be used, but only a gas heater is available. The device consists of a piece of Russian iron, nearly as wide as the opening of the heater, with the edges bent upward as shown. Two shelf brackets are attached to the bottom to serve as legs on one side. The other side is supported by the lower part of the heater. When the gas is turned on, sufficient heat is radiated to heat water and food quickly.

Poultry Feeder and Rat Trap

A combination rat trap and dry-mash feeder is a rather novel addition to the poultry house. The feeder is a long box, 1 ft. high and 1 ft. wide, with a sloped and slatted top, through which the hens put their heads to eat during the day. To convert this into a rat trap, a 4-in. hole was bored in the end of the hopper, a short length of 4-in. stovepipe fastened in the hole, and a bag tied over the other end of the pipe and spread out on the ground. A heavy board cover was hinged to the feed box; this was kept open by means of a hook during the day, but the hook was released, and a small prop with a string attached to it used at night. The string led away to a distant window.

Combination Poultry Feeder and Rat Trap That Is Simple to Make and Very Effective

so that the poultryman could pull it without entering the poultry house and disturbing the rats. A yank at the string let the cover drop and trapped the rats inside. Then, by beating on the cover with a stick, the rats were made to run through the hole, down the pipe, and into the bag, where a few blows killed them. As long as the hens ate from the feeder the rats never seemed suspicious.

—L. Harris Hiscock, Skaneateles, N. Y.

Jack Used as Rim Tool

Automobile owners and drivers generally have trouble in bringing the ends of a split rim together when replacing a tire. Various tools are made for this work, but unfortunately they are not usually carried in the car. The drawing shows a simple method of using a jack and a block of wood for spreading the rim. The pressure is exerted equally on the rim at the three points of contact, thus spreading the rim evenly and without the danger of bending it out of shape.
Handy Washtub Stand

The illustration shows a convenient washtub stand that has been found to save much heavy lifting on wash days. A small vent hole was drilled into the cap. The cost of the two fittings approximated that of a single gallon of gasoline, and, as much gasoline waste was prevented, the improvised cap saved its cost several times over.

Color Screen for the Camera

The illustration shows an easily made color screen for the camera. It consists of a short length of cardboard tube that fits the lens; a cardboard ring is glued in the end of the tube at the point indicated and two circular glass disks are cut to fit the inside of the tube. These disks must be free from scratches and bubbles. Disks cut from old glass negatives are ideal for this purpose. A piece of celluloid, stained yellow, and cut to the same size as the glass disks, is placed between them. The assembly is then placed in the tube against the cardboard ring, and a second ring is glued in the tube against the other side of the assembly, to hold it in place.

—Wm. J. Edmonds, Rutland, Vt.

Rubber Remover

The device illustrated has been found useful for removing tight rubbers, which are not easy or agreeable to remove with the hands when muddy. It is made of sheet metal, cut and bent to the shape indicated and screwed to the floor or the edge of a step. In using the device, the heel of the rubber is first pulled off by inserting it in the U-shaped slot and pulling the foot. The foot is then pulled back so that the tongue comes between the rubber and the sole of the shoe, after which a slight jerk of the foot will release the rubber.

Inexpensive Emergency Gas-Tank Cap

The cap of the gasoline tank is one detachable part of the car that will loosen and become lost unless care is used to screw it tight after each filling with gasoline. One motorist discovered that the tank cap had been lost at a place where no service station could provide a replacement part. A hardware store, however, provided a good substitute cap, and one that is worth noting, in case the reader should be caught in the same predicament.

A close pipe nipple and a pipe cap, of the same pipe-thread size as the opening in the tank, which was of a standard size, provided a substitute equal, except in point of appearance, to a regular cap. A
THERE are but two kinds of tire damage: that caused by carelessness or inattention, and that resulting from unavoidable accidents or wear. The car owner is particularly interested in the first variety, the kind that can be prevented with proper knowledge of the causes. In addition, he will want to know what kind of tire damages can be repaired with economy, and what injuries are so severe that it is best to discard the tire in favor of a new casing.

To understand the common abuses and damages, something must be known about the parts of the tire. Each individual part of the tire has a duty to perform, and that duty cannot be done if the parts are damaged or destroyed. Principal among the tire parts is the carcass. This is the framework of fabric, fabric cords, or cable cords that gives the tire its strength and serves to hold the air pressure. It is not designed to stand road wear; that function is left to the tread of the tire.

The tread of the tire is made of a compounded gum that resists wear. The rubber of this has little strength as far as retaining air pressure is concerned, but it is designed to combat wear and to protect the carcass from dirt, moisture, and direct contact with the road. The sidewall of the tire has much the same duties as the tread. It is not nearly as thick as the tread, for there should be little wear on the sidewall unless the tire is abused.

A strip of loosely woven fabric is placed between the tread and the carcass; this is known as the breaker strip, and serves to distribute the road shocks more evenly over the carcass. A cushion of rubber, known as the cushion of the tire, is placed between the breaker strip and the carcass. In some cases there is a layer of the cushion stock between the breaker and the tread as well. This cushion serves to soften the road blows so that the carcass does not take the shocks directly.

The bead of the tire simply serves to hold the tire in place on the rim. Its shape will vary with the type of rim used. The types used are two in number: the straight side and the regular clincher.
Most of the larger tires have beads to suit straight-side rims while a great many of the 30-in. tires still use the regular clincher type.

Without question, the greatest and most common abuse of tires is under-inflation. With all the warnings that have been given, car owners still persist in running tires without sufficient air pressure. A multitude of damages is possible from under-inflation. The carcass of the tire is constantly bent and “hinged,” the gum that binds the layers of fabric or cords together is destroyed, and the plies rub together. Friction soon develops and the tire wears itself out.

It can be seen that the cushion of the tire will be put under great strain in an underinflated tire. The constant bending wears the cushion, which soon breaks down and rolls into tiny balls of rubber. Then the road shocks are taken more directly on the carcass, giving it punishing abuse. The binding gum between the tread and carcass gives way causing a condition known as a “separated” tread.

Rim cuts, as shown in Fig. 1, are a common ailment on tires that have been run soft or flat. The tire bends over the rim, which cuts the rubber of the sidewall and breaks the carcass of the tire. A blowout, which may be so severe that repair is impossible, soon follows. Other injuries of this character are due to bent or battered rims. Rusty rims will also help in making rim cuts. The rims should be straight, kept free from rust, and given frequent coats of rim paint.

The tread of the tire is often worn down through careless driving. Spinning the wheels to make a start, or in an effort to climb out of a mud hole, may grind several hundred miles from the life of the tire. Bad skids on rough pavement will wear the treads excessively, and sliding the wheels by locking the brakes will grind off the tread in patches, as shown in Fig. 2. A wobbly wheel or a bent axle will also wear the tread down unevenly, and if the front wheels are out of alignment the tread will wear off on one side. Nearly all these causes of premature tread wear can be avoided by a little care in driving.

It is often necessary to use tire chains when driving in the mud or on slippery pavements, but chains should be used no longer than absolutely necessary. A good chain, if applied correctly, will cause little wear, but an old chain or one applied incorrectly will grind the tread of the tire badly. Cheap chains should be avoided, as they are apt to be soft, and will wear rapidly, presenting innumerable sharp cutting edges to the tire; old chains also are undesirable, for the same reason. Whenever used, tire chains should be applied with enough slack to allow them to creep slightly, thus distributing the wear more evenly around the tire. Chains should always be applied with the same side next the tire, as the road side of the chains wears, and, if placed next to the tire, will cause rapid destruction. A typical example of chain damage is shown in Fig. 3.

Most motorists know that grease and oil are not good for rubber, but a peep into their garages would not make one credit them with such knowledge. Tires should never be allowed to stand in grease or oil, and if a smear gets on the tire, it should be washed off with a little warm water. The rubber will rot quickly if the grease is allowed to remain.

The neglect of the tires frequently extends to the spare tire. Nearly every car nowadays is equipped with a spare tire at the rear, yet fully 50 per cent of these spares are unprotected. A tire cover is cheap insurance against the effects of heat, sun, and moisture. Most of the life of a tire may be destroyed by carrying it as a spare without any protection.

Loose inside shoes are another cause of tire damage, often unsuspected. Shoes must be used in emergencies, of course, but they should not be kept in the casing any longer than necessary, and, if they must be used, they should be cemented in place. A loose shoe will shift slightly, and will rub or chafe the fabric as it shifts, until the inside of the casing presents the appearance shown in Fig. 4. Aside from the liability of chafing, the shifting shoe may pinch or injure the inner tube.

To get the most out of his tires, every car owner should inspect them at frequent intervals. Many small damages, if found in time, may be repaired at a small cost, but their neglect may mean a more costly repair, or a damage that makes the tire worthless. Many of the small repairs may be made at home if the motorist finds the injury in time.

In going over the tires for damages, some systematic method should be followed. Hit-and-miss methods will not do, as one may pass up several injuries that a more methodical examination will disclose. Possibly the inspection is best started at the inside of the tire. Open the tire and prop the beads apart with short sticks, so that the inside of the tire is brought into plain view. Go over the
These illustrations show some other common types of damages to tires, and what causes them. The best and costliest tires will not give the service expected of them if neglected.
inside of the tire carefully, feeling for fabric breaks or chafed spots. Bend the outside of the tire just above the bead channel, opening any rim cuts or sidewall damages. Flex the tread surface by pressing the tire together and opening any tread cuts. Place one thumb at the center of the tread and the other at the union of the sidewall with the tread and press the thumbs together. This will usually detect any tread separation.

The inspection of the inside of the tire will disclose any fabric breaks or chafes. A good light is essential in making the inside examination, as the inside of a tire is covered with a light layer of gum and a coat of tire paint, and small cracks in the fabric may escape detection if the inspection is not carefully made.

A good sense of touch is necessary in finding any separated plies of the fabric. If the plies are separated, the friction—the light layer of gum between them—will be rolled up into tiny balls. These can be felt between the layers of the carcass by running the fingers over the inside of the tire. Neglect of this injury usually results in a blowout, as the plies of the carcass rub together and wear themselves out. Separated plies of the carcass are usually the result of running a tire soft or flat.

The bending of the sidewall near the bead will open up any rim cuts. The rim cuts in a clincher tire will be close to the bead channel and may pass unnoticed if the examination is not carefully made. Those on straight-side tires will be farther up on the sidewall. While looking for rim cuts, it is a good plan to check over the condition of the bead. A broken bead core or a chafed bead cover are the two most common bead damages.

Cuts on the tread can be found by bending, although they may not be noticed when the tire is mounted and inflated. Any tread cut, however small, should be repaired at once. In themselves, tread cuts may not be serious damages, but their neglect invites dirt and moisture to enter the tire and rot the carcass. Severe cuts and damages will often extend through the tread and open one or more plies of the carcass.

Tread separations are most often found at the hinge point of the tire. This is the point at which the sidewall and the tread meet. As explained, this damage can be detected by pressing together the hinge section with the thumbs. In aggravated cases, where sand and dirt have been allowed to enter through a small cut or hole, the separation may bulge out and take the form of a sand blister, such as shown in Fig. 5. Sometimes the tread separation is caused directly by a small cut or hole. The dirt and moisture destroy the friction between the carcass and the tread, causing the separation to appear. Most often, however, tread separation is caused by underinflation.

Stone bruises, caused by bumping against curbs, or striking heavy stones in the road at high speed, are often hard to find. Usually they can be found at points in the carcass that seem to have lost their "life." More serious cases manifest themselves in a break in the fabric, which is plainly seen when the inside of the tire is inspected. A stone bruise is the direct forerunner of a blowout. The blowout may not occur at the time the tire is bruised, for the fabric break does not always extend through all plies, but pinched tubes often result from bruises that break inside plies of the tire.

The frequent inspection of the tires will help to get the most from them. This inspection or examination may be of the nature of looking over the tire for tread cuts or may be an elaborate examination of both the inside and the outside of the tire. The inspection should be made once every two months or oftener.

Many of the minor tire damages can be repaired at home, but the more serious ones are best taken to a competent tire repairman. If there is any doubt as to whether a tire can be repaired with economy, take the doubtful casing to the tire man. Sometimes a few dollars spent in making a small repair will add thousands of miles to the life of the tire.

In general, a tire with a badly separated tread cannot be repaired with economy. This tire ailment usually results from underinflation, and there are apt to be many other things besides the tread at fault. Sometimes a badly separated tread is repaired by retreading the tire. This repair is rather costly and should never be made unless the carcass of the tire is worth another tread.

Blowouts from stone bruises are usually repaired. Sometimes this damage happens to tires that are almost new. However, the permanent repair should not be postponed by using an emergency inside boot. If this is done for any length of time, the casing may be damaged to such an extent that its repair is doubtful economy. There have been many tires ruined by using blowout boots for some time after the blowout has happened. One such tire is shown in Fig. 6; the carcass was rotted by the dirt and
moisture which had easy access to the inside of the tire.

Rim cuts are hard to repair. In many cases this damage extends around the entire tire, and, when such is the case, no attempt should be made to repair it. To repair it properly would mean considerable expense, and after the job was done it is doubtful if the repair would hold. A short rim cut, however, can be repaired effectively.

Nail holes and small cuts are easily repaired at home, and they should not be neglected, as ignoring them may mean a serious damage later on.

The sidewalls of the tire are not as frequently injured as some other parts, but they can be almost destroyed by careless driving. Running in deep ruts or in street-car tracks will impose a great deal of wear on this part of the tire, which is not built for it. Very often the tire sidewalls are scuffed and bruised, as in Fig. 7, by attempting to place the car too close to the curb when parking. The remedy for these troubles is obvious—keep out of ruts and street-car tracks, and don't allow the tires to scrape against the curb.

Careful inspection of tires followed by the necessary repairs means dollars saved for the car owner. Many of the minor injuries can be repaired at home; in fact, if the tires are cared for as they should be, trips to the tire man will be few and far between. It is the neglect of tires that causes the more important and serious damages. Much of the dissatisfaction toward the service the car owner gets from his tires will be done away with if he will take care of his tires as he should. Repair the little damages before they become big ones and the tire mileage will correspondingly increase.

The next article will describe the repair of tire casings.

Homemade Side and Tail Lamps

Electric side and tail lamps for use on a light car can be constructed from nicked hub caps, and will look just as neat as the manufactured ones. A block of wood, cut to fit inside of the hub cap, is drilled to take a standard automobile-lamp socket, then counterbored for the lamp. The block is inserted into the hub cap, and, in position shown, and fastened in place by means of small wood screws, driven in from the outside. The lens is held between the block and a brass ring, which is soldered at two points to the inside of the hub cap. Another method of holding the lens in place is to insert a single coil of spring wire inside the hub cap, so that it will spring outward against the cap when released, in the same manner as a common tail-lamp lens is locked, the threads keeping the wire from slipping out. A small hole is punched in the end of the cap to receive a bolt for fastening the lamp.

Appropriate Camp Ash Tray

In harmony with the atmosphere of the camp and forests is the ash tray shown in the photograph, which is made to represent a black bear, standing erect with its paw in the crotch of a small maple branch that supports the ash tray at a convenient height. The bear figure is cut from a very thin hemlock board with a jigsaw, and appropriately finished in glossy black paint, with a bit of buff on the muzzle.

Segregating Nonproductive Hens

In order to pick out nonproductive hens, we placed a piece of woolen cloth, saturated with glycerin and colored with a dye, above the entrance of each nest, so that the hens would strike against it when entering the nest. The result was that the laying hens bore marks on their heads, backs, or tails, while the nonproductive ones remained unmarked. After a second and third test the latter were segregated.—Abe Sair, Brandon, Can.
Skirt Used as Grass Bag

An old wide dress skirt, with the belt cut off, and the bottom stitched across, makes an excellent bag for carrying lawn rakings. Several bushels of mown grass can be carried in it conveniently, as it is short and wide, and does not weigh as much as a basket.

Emergency Headlights

When the headlights of an automobile are "out of commission," owing to a ground or a short, one or both of them can still be used, providing there is a trouble lamp in the car. The trouble-lamp socket is removed, and the wires attached to the headlight plug, replacing the usual wires. The cord is then run from the dash-lamp socket to one of the headlights, as shown, or better still, by means of an extra length of cord, it can be connected to both headlamps, in parallel. It is a good idea to be prepared to meet emergencies of this nature by carrying an extra trouble cord, fitted with a plug at each end.

Fishing in Center of Swift River

How to fish a rushing river in mid-stream successfully has been a mystery to many who have wanted to try their luck in the far-out pools, which are difficult, if not impossible, to reach from shore. For such fishing, the board or trolling guide shown serves excellently.

The device is made from light pine and is 1 1/2 ft. long, 6 in. wide, and 3 1/4 in. thick. Both ends are pointed, as shown, the better to cut the water. Four screw-eyes are driven into one side of the board, and wires that are stiff enough to prevent bending easily are attached to the eyes, as shown, by making a ring or eye at the ends. A horizontal wire with an eye at each end is run between the end wires and is attached to eyes made in the outer ends of the first wires. The line that runs to the boat or fisherman's rod has a ring fastened to it that slides freely along the crosswire. The line with the lure on it is connected to the main line, and with it one can reach the deep spots that cannot otherwise be successfully fished. To make the block ride the water properly the bottom edge must be ballasted with lead.

Fishing Block or Trolling Guide for Fishing in the Middle of a Swift Channel

Holes are drilled into the edge of the board with an auger bit, a staple or nail driven into the center of each hole, and melted lead is poured in. Enough holes are made and filled in this manner so that the block will be pulled down in the water to a depth of 3 inches. Also, as there is a pull on the line side this must be balanced by weighing down the opposite side, which can be done by cutting a dovetailed groove along the back of the board, and filling it with melted
lead, or by fastening a weight to the board, above the center. This will make the device swim at the proper angle, so that when there is a pull on the line, the device will not turn over toward the line side.—Robt. Page Lincoln, Minneapolis, Minn.

**Upholstery Nails Improve Steering Wheel**

The steering wheel of a light car, which has straight pinion gearing from the wheel to the steering knuckle, is deflected very easily by stones and ruts on the road, so that it is necessary to grip the wheel firmly on rough roads. To prevent the wheel from slipping in the hand, due to its smooth surface, ordinary round-head upholstery nails should be driven into the steering wheel on the inside. The nails used for this purpose have a large fiber head, about ½ in. in diameter.

**Cooking Lunch with a Blowtorch**

The writer once worked at steam fitting and learned, among other things, a handy way to heat a lunch with a blowtorch. A piece of flat steel is cut to form a portion, 4 in. wide and 7 in. long, which narrows down to a section, about ¾ in. wide and 5 in. long, tapering to a sharp point. The wide portion is bent at right angles 4 in. from the end, and forms a table 4 in. square. The narrow part is stuck into the ground or floor when used, and a blowtorch is placed in the position indicated, with the flame directed under the table. A lunch can be heated in a surprisingly short time in this manner.—L. B. Robbins, Harwich, Massachusetts.

**Simple and Effective Burglar Alarm**

A village storekeeper, who did not wish to become a victim of robbery, of which a number had occurred in his vicinity, improvised the simple burglar alarm shown in the photograph, and, with its use, succeeded in capturing one of the night marauders.

The alarm consists of a trip arrangement, which, when released, presses the telephone push-button switch, thereby ringing the call bell at the telephone exchange. The operator then notifies the sheriff, the owner of the store, and other interested parties. The trip is merely a springy stick, with the lower end securely screwed to the wall below the button, the upper end being loose and fitted with a short peg. The push-button switch is located directly under the peg, as shown, so that the button will be pushed down when the stick is released. A short piece of wood is set between the edge of the stick and the wall, and is connected to a long stout cord, passed through a few screweyes, and stretched in the position most likely to be passed by one attempting burglary. When this cord is pulled the piece of wood is dislodged and the peg presses the push button, which rings the bell at the telephone office continuously until a switch is released by the operator. As no alarm is sounded within the store, the intruder is unaware that he has "given himself away"—until the arrival of the officers. This idea can only be used, of course, where a push-button ringer is used on the telephone.
Salvaging Submerged Objects

While idling along close to shore in a rowboat one day the writer happened to "spot" an object lying in the mud about 7 ft. under water. After ascertaining that this was a steel fishing rod, preparations were made to salvage it. Several attempts to hook it with a large fishhook proved futile, so in the end the writer had to don a bathing suit and go after it. This little incident suggested a better method of salvaging submerged objects, which was later tried out and found successful.

A piece of pipe about a foot long, and a length of hay-baling wire, were picked up around the barn. The wire was doubled and twisted to make it stiffer, then formed into a loop and inserted in the pipe so that it projected out of both ends as shown. These parts, and a coil of the baling wire, were kept in the bottom of the boat, to be assembled as shown in the sketch when an object worth salvaging was located.

When using the device, the length of pipe is wired to the handle of an oar, with the wire loop inside, and the lower end of the loop projecting enough so that it can be passed over the object to be salvaged. A wire attached to the upper end of the loop and running up to the user is then pulled, so that the loop holds the object securely. By lifting the oar the object is easily brought to the surface.

When trying to ascertain the nature of a submerged object, a powerful flashlight is of aid.—C. M. Wilcox, Torrington, Conn.

A Cheap Glue-Pot Heater

A small tin can filled with sawdust makes a glue-pot heater that will keep the glue hot all day; a ½-gal. can is large enough. Set a round piece of wood vertically in the center of the can and fill the space around it with sawdust. Then remove the piece of wood and drop a lighted match into the hole; this will cause the sawdust to start burning, giving heat enough to keep the glue soft. Two short iron bars are placed on top of the heater to provide an air space between it and the glue pot.

Back-Yard "Hen Pastures"

Green feed is necessary to the health and productivity of hens, and the farmyard has no end of green things, bugs, worms, seeds, and grit, which may be had for a little desultory hunting. The commercial poultryman also takes special pains to supply free range if possible, or provides some kind of green feed in sufficient quantities to keep the birds flourishing, but the back-yard hen frequently has a hard time of it, and the owner often decides that there is something wrong with the breed or with the grain combination, when there is nothing more the matter than lack of green feed.

One of the principal things this back-yard hen needs is a "magic green carpet." That carpet, says the U. S. Department of Agriculture, can be made of oats grown in a small part of the yard. Instead of putting a fence around this tiny field to keep the fowl from destroying it before it has a chance to develop, some fine-mesh fencing wire is placed over it, the wire being tacked to a frame made from pieces of 2 by 4-in. wood. The oats will grow up through the mesh where the hens can pick them off, but they will be unable to reach in far enough to do any
serious damage to the plants. Such a patch of oats, if watered regularly, will last for a long time. The hens will walk over the wire and graze off the tops, but if the wire has been stretched tightly it will not sag down far enough to permit the hens to reach the ground.

"Solo" Batting Practice

The young baseball enthusiast often finds himself handicapped in batting practice because there is no one to pitch the ball. The device shown, while hardly taking the place of a pitcher, nevertheless affords the batter considerable practice.

On the top of a post, 12 ft. high, a bicycle wheel is mounted. A stout cord or light rope, about 10 ft. long, is tied to the rim, and a baseball is attached to the lower end by means of a screweye. The batter gives the ball a swing and the momentum carries it around the post, causing the bicycle wheel to rotate in the same direction. When the ball crosses the imaginary plate, the batter strikes it, sending it in the opposite direction. If the hit has been square, the ball will make several revolutions before it has dropped far enough to enable the batter to strike it again. The batter strikes first in one direction and then in the other, which, with practice, will enable the player to use either hand.—Dale R. Van Horn, Walton, Neb.

Rim Spreader for Changing Tires

A common 8-in. barn-door hinge can be used to good advantage for spreading automobile rims when changing tires. If the rims are perfectly plain at the split it will be necessary to drill two 3/16-in. holes about 4 in. from the ends. Two pins are riveted or welded to the end of the hinge and each end is then bent as shown. The pins are inserted into the holes drilled in the rim and the hinge is pushed down with the foot, thus spreading the rim. If there are studs on the rim, the hinge can be used without pins, by simply butting the ends against the studs, notching the ends if necessary to prevent the hinge from slipping.—Frank N. Coakley, Buffalo, N. Y.

Hanger for Oars

Boats are usually not provided with means for keeping the oars outside of the boat and above the water when they are not in use, and this necessitates lifting the oars into the boat, with the result that the seats are bespattered with water from the wet blades. To overcome this, simple hangers of the kind shown in the illustration can easily be made from short lengths of strap iron, bent as indicated and fastened firmly to the gunwales by long screws.
Seat on Cripple’s Crutch

A cripple, one of whose legs is amputated above the knee, uses a crutch to which a support of the type illustrated is attached. The seat is located at the point most convenient for the user, and takes part of his weight, thus relieving the pressure of the crutch under the arm. It may also be used as shown in the drawing. The support is made of 3/4 or 1-in. wood, comfortably padded on top, and braced by means of 1/4-in. iron rods, flattened at each end, drilled, and bolted to support and crutch.—A. C. Cole, Chicago, Illinois.

Making a Lock Jimmy-Proof

An ordinary door lock can be made jimmy-proof by drilling a 3/16 or 1/4-in. hole through the lock casing, the end of the bolt, and the door casing, as shown in the drawing, so that a nail or a pin can be pushed in. When the door is locked and the pin pushed into place, it will be a hard matter for anyone to jimmy the door from the outside. This idea has been tried and found thoroughly practical.—L. E. Fetter, Portsmouth, N. H.
Reconstructing a Small Wagon

An ordinary coaster wagon with flat steel-rimmed wheels was rubber-tired with lengths of ordinary garden hose, split open on the inside with a knife and stretched around the wheels as shown. A few holes were punched along the edges of the slit to permit the hose to be laced to the rim with shoestrings. The lengths of hose were made to fit together snugly at the ends.

The handle of the wagon was also changed to make it easier for the rider to steer. The tongue was cut near the end attached to the axle, and two iron plates, which, in this case, were taken from the legs of an old army cot, were attached so that the upper end of the tongue could be swung back over the cart. It is not essential to have the plates of the shape shown; straight pieces will do just as well if a little space is left between the cut ends of the tongue.

To make it an easy task for an older person to push the small cart, a short piece of strap iron, with a hole drilled in the end, was attached to the rear end of the cart as shown. A screwhook, screwed into the end of a broom handle, was hooked into the hole of the strip of strap iron, and the handle used to push the cart; this allows the rider to steer, while giving the "motive power" complete control of the wagon at street crossings.—Mrs. Ruth D. Shultis, Albion, Michigan.

Portable Sand Stand for Golf Course

The drawing shows a portable homemade sand stand for the golf course. It can be made for a small sum in comparison with that asked for similar manufactured stands, and it gives just as much satisfaction.

The sand box is made from a 16-in. dishpan, and the upright parts from lengths of ordinary galvanized-iron pipe and fittings. The base is a 2-ft. length of 1\(\frac{1}{2}\)-in. pipe, driven into the ground. The stand is simply set into the base. The lower length of pipe, which is 1\(\frac{3}{4}\) in. in size, is 4 ft. long, and a reducer is screwed onto the upper end. On the shoulder of the reducer the dishpan is placed, a hole being, of course, cut in the bottom of the dishpan, and part of a funnel is soldered to it, as shown; the funnel prevents the pan from tipping, but allows it to be rotated if desired. The 1-in. pipe above the reducing nipple is about 18 in. long. A reducing tee is fitted on this, a 1-ft. length of \(\frac{3}{4}\)-in. pipe, notched to hold the water pail, is screwed into the tee horizontally, and a 3-ft. length vertically. An elbow is screwed onto the top, and a 1-ft. length of pipe is extended as a support for a sign, giving the number of the hole on one side, and ground rules relative to the individual hole on the other side. Ordinary school slates, with screweyes driven into the edge, have proved satisfactory as signs.

During the winter these stands are taken from the golf course, painted, and stored away. A seamless dishpan is used, the handles being left on to provide places to attach a towel.—Dr. Frank B. Swartzlander, Doylestown, Pa.
A Ratchet Post Puller

The ratchet post puller illustrated is operated by means of an ordinary pump handle. The ratchet wheel is shrunk on an axle which is mounted in the vertical members of a strong wooden frame as shown. The pawl that engages with the ratchet wheel is attached to the handle, which pivots on the axle as indicated, and a strong chain, with a hook on one end, is securely pinned to the shaft. In use, the chain is hooked around the post to be pulled, and the handle is operated like a pump.

Simple Droplight Shade Adjuster

An ordinary droplight, fitted with a shade, is often used above desks and drawing boards, but when the light is adjusted high enough to enable one to work under it, it is impossible to keep it from shining directly in the eyes without using an eyeshade, which some people dislike to wear. The trouble can, however, be prevented by adjusting the lamp so that the light is not thrown directly downward. This is done by means of a string, tied around the lamp cord above the shade, and looped over the point of the lamp as shown in the drawing. Obviously, the shade can be set at any angle to suit the user, so that the direct light is cut off from the eyes.—C. L. Hendrickson, Milwaukee, Wis.

Replacing an Auto Engine

In replacing an engine of a light car, it is sometimes difficult to slip the rear end of the engine into position without displacing the gasket on the front half of the universal case. If a jack is set against the rear end of one running board and against a block on the rear hub, the torque tube can be shoved back, and the universal case and gasket can be pushed or tapped far enough back to slip in easily.—A. O. Bosshard, East Moline, Illinois.

Preventing Gummed Tape from Unrolling

To prevent a large roll of gummed tape from unrolling, a simple attachment of the kind shown has been found effective. A small aluminum tube, used for holding extra leads for a metal pencil, was used, and two wire paper clips, straightened to form hooks of the kind illustrated. One of these was run through the center of the roll of tape and the other through the tube. Two short rubber bands were then used to connect the hooks on each side of the roll. When the tape is pulled, the tube rolls back, but the tension of the rubbers prevents the roll from loosening.

Extension for Wrench

Every tractor or other piece of farm machinery has some nuts in locations that are difficult to reach; this necessitates the use of some extension on the wrench when these nuts must be loosened or tightened. A good extension for this purpose is shown in the drawing. It consists of a steel bar, with a slot at one end to fit the wrench head, and having a rivet or pin driven through the slot. With this extension wrench it is possible to grip a nut from the top or side as indicated, in whatever way is most convenient.—G. G. McVicker, North Bend, Neb.
PRIZE OFFERS AND ANNOUNCEMENTS

PRIZE OFFERED FOR WORLD-PEACE PLAN OPEN TO EVERY AMERICAN

One hundred thousand dollars is offered by Edward W. Bok, of Philadelphia, as a prize for "the most practicable plan by which the United States may cooperate with other nations to achieve and preserve world peace." The prize, which is to be called the American Peace Award, is open to "every American," and according to preliminary announcement, the "plans will have to be in probably not later than the middle of November, next." The exact conditions will, however, not be made public for some time. A jury of award, whose membership has not yet been selected, will judge the plans, and the prize will be given in two parts, viz., $50,000 for the plan itself, and $50,000 after the practicability of the idea has been demonstrated, "either through its adoption by the United States Senate, or by a sufficient popular endorsement of it."

CLOSED.

ESSAYS ON PLUMBING AWARDED PRIZES
BY CARNEGIE TECHNICAL INSTITUTE

Recent announcements from the Carnegie Institute of Technology, at Pittsburgh, Pa., state that the award of two prizes donated by the Eastern Clay Products Company, of $100 and $50, respectively, has taken place. The subject of the prize competition was the "Use of Vitrified Clay Pipe in Plumbing Systems," the contest was nation-wide, and the quality of the papers submitted, exceptionally high. The first-prize winner is a student of the institute, and a master plumber won the second prize.

TEN THOUSAND DOLLARS FOR ONE WORD ACCEPTABLE AS MOVIE-PLAY TITLE

Ten thousand dollars for a word, $20,000 for two words, and $25,000 for a three-word combination that can be used as a title for a movie play will be paid by a producing company in the West. The word must be a motion-picture title that will earn more than $10,000 for the company producing a picture with that title, it is announced. As many titles as have promise and prove available will be bought and it is believed the number of good titles to be submitted will be too few rather than too numerous.

PAY TEN DOLLARS FOR HARDWARE IDEAS OF VALUE TO OWNERS AND CLERKS

Ideas for hardware men are wanted by the editor of a trade magazine who will pay $10 for the best one received each month, and $2 for all others accepted. Short letters on how deliveries are handled, unique window displays, how trade is increased, or anything else, of particular interest to hardware clerks and merchants are asked.

OFFER PRIZE FOR NAME FOR NEW TRAIN RUNNING NORTH FROM NEW ORLEANS

The person who suggests a name for a new train passing between Washington, D. C., and New Orleans will receive $200 from the operating company, if the name is accepted. There will be through sleeping-car service between New Orleans, Montgomery, Atlanta, Washington, Philadelphia, and New York City, it is announced.

RADIO MEN TO GET $5,000 A YEAR FROM UNITED STATES GOVERNMENT

One hundred dollars a week is the highest salary offered radio engineers who take the U. S. Civil Service Commission test and are qualified to fill vacancies now existing. Positions paying from $2,000 to $8,000 yearly are to be filled by examinations, applications for which close October 30. The duties are to superintend development of apparatus for land stations, airplanes, ships, and perform similar lines of work. Competitors will not be required to report for examination at any place but will be judged on education, experience, and general training.

GOVERNMENT SEeks JUNIOR ENGINEER FOR BRANCH OF GEOLOGICAL SURVEY

To fill a vacancy in the water resources branch of the U. S. Geological Survey the U. S. Civil Service Commission will select a junior engineer from applications received before September 22. The entrance salary is $1,620 a year, plus the increase of $20 a month granted by Congress. The field of activity may be in any part of the United States.

GIVE $5,000 IN PRIZES FOR BEST RADIO STORE WINDOWS

Five thousand dollars in prizes are offered radio dealers who prepare the best window displays showing Cunningham vacuum tubes, from September 24 to October 1.

CONTESTS PREVIOUSLY ANNOUNCED

Medals, Diplomas, and Money Awards: Announced August issue, 1921; awards offered by the Franklin Institute. The Franklin medal is for workers in technology; the Elliott-Creson is for original research in work and invention; the Howard N. Potts is for important development of previous discoveries and inventions. Each award consists of a medal with a diploma. There are also a silver medal, and a Certificate of Merit awarded for meritorious discoveries, and cash premiums for certain work in optics.

Best Treatment Regarding Immortality: Prize $1,000; announced January issue, 1922; closes Dec. 1, 1922.

Awards to Further Science of Electricity: Medals and prizes, amounting in all to about $20,000; announced February issue, 1923.

For Best Work by American Chemist: An annual award of $25,000; announced February issue, 1923.

Names for Great Lakes Steamers: Two prizes of $50 each; announced February issue, 1923; suggested names must be submitted before the opening of navigation season in 1923.

Essay on Economic Subject: Prize $1,500; announced March issue, 1923.

Pulitzer Prizes, Columbia University: For best work in various literary and journalistic lines; announced April issue, 1923; nominations of candidates must be made before Feb. 1, 1924.

Scholarships for Nurses and Ex-Service Men: Numerous scholarships provided at colleges and universities throughout the country under the will of the late La Verne Hoyes; announced April issue, 1923.

Most Practicable Device for Recording Mine-Shaft Signals: Prize of $250 or $500; announced May issue, 1923.

Prizes for Essays: Three yearly prizes of $2,500, $200, and $200; announced June issue, 1923; for articles on subjects relating to business development and the modern trust company; closes August 31, each year.

Boys' and Girls' Short-Story Contest: Two first awards of $100, and other prizes; announced May issue, 1923.

Greatest Benefit to Community Rendered by Women's Club: Prize, $1,000; announced May issue, 1923.

Endurance Prize for Diesel Engine: Prize, 1,000,000 francs (normally about $200,000); announced June issue, 1923; applications for privilege to compete should be in before December 1.

Device for Recording Shaft Signals: Prize, £250; announced May issue, 1923.

Prizes for Essays on Technical Subjects: Three prizes of $1,500, $500, and $500; announced June issue, 1923.

Our Bureau of Information will furnish addresses and further details.
SCIENCE NOTES FOR DAILY USE

MODERN LIGHTS, RIVALING SUN, STUDIED
TO AVOID HARM TO EYES

Cave dwellers of 50,000 years ago, lighting their
ways with firebrands, suffered little pausing's riding
according to experts studying ways to prevent the
strong glare of modern lighting systems, that are no
so noxious to the eyes of those working and lived
under their rays. When candles and oil wicks were
replaced by bright gas lamps and electric bulbs, no
great, when the auto to care for the increased
brilliancy. This resulted in poor distribution of light,
and had the same effect as looking into the sun on
a cloudy day. Attention is to be turned to factory
and school lighting for the purpose of devising rules
by which such illumination will be governed.

AUTOMOBILE RIDING INCREASES LIFE
AN AVERAGE OF ELEVEN YEARS

Figures compiled recently by three physicians
indicate the universal adoption of the automobile
as a means of individual transportation has
added 11 years to the average life of an Ameri-
can citizen. In 1903, when only 10,850 cars
were made, the average length of life was placed
at 37.64 years. Ten years later, when the produc-
tion of autos had increased to 468,000, the life
expectancy had advanced to 41.01 years. In
1922, when 2,937,900 auto-
mobiles were turned out,
by the factories, the aver-
age life had increased to
48.66 years. Sunshine,
open air and fresh air
from worry that results
from running on the open road, the doctors stated,
caused the noticeable lengthening of life in the last
twenty years.

COAL FACTS

ONE pound will pull one ton of freight 16
miles.

For each scoop of coal one summer's fare for one mile is required to pay for it.

Combined revenue from a train in which
revenue in each coach will not pay
for the coal required to pull them.

There are more than 225 commercial articles
extracted from coal. It takes 150 cubic feet of air to burn a
pound of coal.

Coal has not been in general use more than
700 years.

A locomotive uses one pound of coal for
every eight gallons of water.

ENERGY FOR MANY TASKS SUPPLIED
BY SINGLE ELECTRIC UNIT

It has been shown by recent tests that one kilowatt-
hour of electricity per hour to perform numerous tasks
requiring heat and power. By it enough energy can
be supplied to drive a sewing machine for 20 hours;
clean 15 steel tableknives for a year; clip five horses
or 25 sheep, or milk 20 cows. A man could heat
his shaving water for a month with its help, or for
60 days, if he were a heavy smoker. In the house-
hold it becomes a busy little servant, frying 15 chops
in as many minutes, keeping a flatiron hot for three
hours, or for 20 mornings warming the curling iron.
The dairymen could employ it to chop half a ten
of hay, separate 300 gallons of milk, or churn 440
pounds of butter.

EGG INCUBATOR USED TO TEST MILK
IN THE MAKING OF CHEESE

Long used to hatch chickens, the incubator now
has an important part in cheese making, having been
adapted to the testing of milk. As the device sup-
plies an even heat at the required temperature, it
may be used in any one of the several curd tests.
In addition to being simple and easy to operate, it
adds accuracy to the experiments. Already a modi-
fied egg incubator has been placed on the market
for cheese makers. Instead of trays, it is fitted with
racks and glass tubes for the milk samples. Formerly
it was a common custom in the industry to hang
the specimens in the boiler room, but because of
the uneven heat poor results were obtained and o:
the undesirable milk was into the curdling vats.

CLAYS WASHED TO MAKE FORCE LAIN

In experimenting with
Georgia clays, government
experts have devised a new method of
washing that has proved
successful in the separa-
tion of the desirable and
undesirable portions. As
a result, they are being commercially tested in the
manufacture of refractor-
ies, floor tile, wall tile,
face brick, and electrical
porcelains. Other clays also are to be given com-
mmercial trials.

TELEPHONING OVER POWER LINES
WITH TWO COMPLETE SETS

With two sending and two receiving sets working
through single telephone instruments on a power
transmission line, both parties may talk and
listen at the same time, as a result of a recent
experiment in the middle West. On the lines of a power
company a high-frequency automatic telephone
system was installed, said to be a long step in ad-
vance of anything before attempted with so-called
wired wireless. Previous tests made possible only
one-way communication.
Men Who Care
For whiter teeth are now fighting film

Wherever you go among careful people you see teeth that glisten now. Millions of people every day combat the dingy film.

This test will show you how. The results will amaze and delight you. Make it, for your own sake, now.

Those dingy coats

Film is that viscos coat you feel. Much of it resists the tooth brush, clings and stays. Soon the film discolors, then it forms dingy coats which hide the luster of the teeth.

Film also causes most tooth troubles. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Germs breed by millions in film. They, with tartar, are the chief cause of pyorrhea.

Few people escaped these troubles. So dental science has found two ways to daily fight that film. One acts to disintegrate the film, the other to remove it without harmful scouring.

After many careful tests these methods were adopted. A new-type tooth paste was created to apply them daily. The name is Pepsodent. Now leading dentists the world over are urging its adoption.

Watch its effects

Pepsodent also multiplies the alkalinity of the saliva as well as the starch digestant in saliva. Those agents are there to constantly fight acids and digest starch deposits on teeth. Every use of Pepsodent gives them manifold effect.

Thus Pepsodent does essential things which old ways cannot do. The results are quickly seen and felt. No one can doubt the benefits they bring.

Send the coupon for a 10-Day Tube. Note how clean the teeth feel after using. Mark the absence of the viscos film. See how teeth become whiter as the cloudy coats disappear.

Once learn this way to whiter, cleaner, safer teeth and you will always want them. Cut out coupon now.

Protect the Enamel

Pepsodent disintegrates the film, then removes it with an agent far softer than enamel. Never use a film combatant which contains harsh grit.

These groups of stockholders illustrate the rapid growth in ownership of the Bell System.

A Community of Owners Nation-wide

"Who owns the company?" "What is behind it?" These questions are asked in appraising the soundness of a business and in determining its aims.

The American Telephone and Telegraph Company is owned by more than 270,000 people living in every state in the Union. Could the stockholders of the Bell System be gathered to one place, they would equal the population of a city about the size of Providence or Denver.

They constitute a representative cross-section of American citizenship. Among them, of course, are bankers and men of large affairs; for the idea of ownership in the Bell System appeals to sound business judgment and a trained sense of values.

In this community of owners are the average man and woman, the storekeeper, the clerk, the salesman, the professional man, the farmer and the housewife—users of the telephone who with their savings have purchased a share in its ownership. The average individual holding is but twenty-six shares.

No institution is more popularly owned than the Bell System, none has its shares distributed more widely. In the truest sense it is owned by those it serves.

The Cutter of Chromium Steel HOLDS ITS EDGE

Almost as sharp as a razor blade; even after considerable cutting! Zing!—with the grain, 'gainst the grain and 'cross the grain—feel the Sargent Auto-Set Bench Plane cut smoothly and cleanly.

The diamond-like toughness of chromium alloy permits the use of a thin blade—and the thinner the blade, the keener the cutting edge. The advantage of a thin blade is also emphasized when it finally needs whetting. It is honed in a jiffy—replaced—and shaving away in short order, with the original adjustment unchanged.

For the finishing touches and working in restricted quarters, you need the Sargent Steel Pocket Plane and the Steel Block Plane. These smaller planes are indispensable to every work-bench. They are light, handy faithful—the tools of master craftsmen.

Write for the Sargent Book of Planes. It's full of interesting information. And see these Sargent Planes at your hardware dealer's.

Learn to Play

You are always popular and sure of a good time if you can play some musical instrument. By yourself, with your friends around the piano, in orchestras or bands—there is no end to the pleasure music will give you. And there is no easier way to earn money in your spare time. Choose your instrument now and let Wurlitzer help you buy it and learn to play it.

Try Any Instrument in Your Own Home

At Our Expense

You may now have any known musical instrument for a week’s free trial in your own home. There is no obligation to buy—no expense for the trial. You may return the instrument at the end of a week if you decide not to keep it.

Monthly Payments

The Wurlitzer plan makes it easy for you to own the instrument you want. Payments are conveniently arranged in small monthly sums—a few cents a day will pay.

Wurlitzer instruments are known everywhere for their unusual tone quality and excellence of workmanship. They are used by the greatest professional musicians, bands and orchestras. Harry L. Jacobs of Sousa’s Band, Brooke’s Marine Band, and Chicago Grand Opera says: “I am proud to be the owner of one of your new cornets. It is positively superior to anything I have had in all my years of cornet playing.”

Easy to Buy

Thousands of amateur musicians are playing on Wurlitzer instruments. Many of them could not have bought except through the Wurlitzer selling plan. Wurlitzer is the world’s greatest music house, with stores and dealers in all parts of the country. But no matter where you live you will receive the same service by mail as though you lived next door to the factory. Send the coupon today.

Send for Free Catalog

The greatest musical catalog ever published. Over 3,000 articles—every known instrument described and illustrated—many of them shown in full color. Gives you all details of the Wurlitzer plan. Send coupon now.

Wins a Welcome

You are welcome everywhere with a sweet-toned Buescher Saxophone. It is the one instrument that everyone can play—and it wholly satisfies that craving everybody has to personally produce music. It is so perfected and simplified that it is the easiest of all musical instruments to master. With the aid of the first three lessons, which are sent free (upon request) with each new Saxophone, the scale can be mastered in an hour; in a few weeks you can be playing popular music. Practice is a pleasure because you learn so quickly. You can take your place in a band within 90 days, if you so desire. Saxophone players are always in demand for dance orchestras.

Nothing can take the place of the Saxophone for home entertainment, church, lodge, school. It increases the pleasure you get out of life, increases your popularity and your opportunities.

Free Trial—Easy Payments

You may have six days' free trial of any Buescher Grand Saxophone, Cornet, Trumpet, Trombone or other instrument. Easy terms of payment can be arranged. Mention the instrument interested in and a complete catalogue will be mailed to you free.

Free Saxophone Book

Every music lover should send for a copy of this interesting book on the history and development of the Saxophone. It tells which Saxophone takes violin, cello and bass parts, and many other things you would like to know. Also illustrates first lesson. Send coupon for your free copy.

SHOP WORK with a CARNE ARTIFICIAL ARM
FOR nearly ten years a Carnes Artificial Arm has kept Mr. Babie Yazzie of Lawrence, Kan., on the payroll as a draftsman and machinist at a good salary. Thousands of other mechanics, artisans, office workers, farmers and laborers owe their independence to this improved arm.

Life-Like in Action and Appearance
The Carnes Arm cannot be detected from the natural except by close inspection. Its user can dress himself, use knife, fork, pen, pencil and keys; pick up large or small objects, carry a pipe—indeed, do virtually everything that was possible before. He can bend the elbow of the Carnes Arm, bend and turn the wrist and open and close the fingers at will, even if the amputation is at the shoulder.

192-Page Book FREE. Illustrated with photographs showing what can be done with this remarkable invention, will be sent free to any person interested Send for it now.

ATKINS METAL CUTTING SAWS

Use Atkins
"Non-Breakable"
Hack Saw Blades

Cut Faster, Easier and Do Not Break

ATKINS AAA Non-Breakable Hack Saw Blades are made of selected steels, hardened and tempered by an exclusive gas and oil process which makes the cutting edge extremely hard and the back unusually tough and flexible.

This not only prevents practically all blade breakage, but makes them cut faster and easier.

You can reduce your metal cutting costs and avoid losses due to blade breakage by using Atkins Hack Saw Blades. Let us prove it. Tell us what metal you cut, enclose ten cents and we'll send you a sample blade that will give you remarkable cutting results.

Saws for Every Service

No matter what kind of wood or metal-cutting you do, there are Atkins Saws to save you time, labor and money. Ask for our free booklets on saws you're interested in.

Get This FREE Book on Saws

A 32-page book that's full of practical suggestions on metal-cutting, and general shop information. Every man who buys or uses saws will find it helpful. Just write your name and address on the margin of this page and mail it to us.

Different from all others—the NEW BENJAMIN AIR RIFLE

Made on a different principle from all other Air-Rifles.

The Benjamin is really a strong air-pump used to compress the air in the air chamber to any degree of power desired. From one to six strokes of the pump give all the force necessary. Each additional stroke increases the power. The Benjamin works on the same principle as all air-drills and air-hammers—with this difference:

You control the shooting force as you desire. Look at this block of hardwood. It shows how Benjamin power is regulated as you wish.

You can't have accidents with a Benjamin. It's safe, always. Because you control the power. The Benjamin never sees shooting forms, and has no springs to get out of order or shake your aim. Write to get interesting folder about this wonderful air-gun.

If your dealer does not handle, ask dealer to order—

NEW LAMP BURNS 94% AIR

Beats Electric or Gas

A new oil lamp that gives an amazingly brilliant, soft, white light, even better than gas or electricity, has been tested by the U. S. Government and 35 leading universities and found to be superior to 10 ordinary oil lamps. It burns without odor, smoke or noise—no pumping up, is simple, clean, safe. Burns 94% air and 6% common kerosene (coal oil).

The inventor, H. E. Johnson, 609 W. Lake St., Chicago, Illinois, is offering to send a lamp on 10 days' free trial, or even to give one free to the first user in each locality who will help him introduce it. Write him today for full particulars. Also ask him to explain how you can get the agency, and without experience or money make $250 to $500 per month.

WHICH ONE will help you win fame and fortune?

For half a century the world's great artists have used Conn instruments. The stars of today in concert bands, symphony, opera, and popular orchestras, have risen to fame playing Conn. They accord a generous measure of their success to these superb instruments.

You will profit by following their example. Win success, profit, pleasure with a Conn, "the instrument of the artists." Remember, with a Conn you get these definite points of superiority:

Easier Blowing: each tone responds to the slightest lip pressure.

Perfect Scale: accurate intonation in all registers.

Most Reliable Action: lightest, easiest and surest, whether slide, valve or key.

Beautiful Tone: our exclusive hydraulic expansion process insures accurate proportions and perfect carriage for sound waves.

All exclusive Conn features at no greater cost.

Highest honors at World Expositions.

FREE TRIAL; EASY PAYMENTS. Send postcard for details, mentioning instrument that interests you. Conn is the only maker of every instrument used in the band. We also make high grade violins and drums.

Dealers and agents everywhere. Factory branches:

HANES ATHLETIC UNDERWEAR is guaranteed absolutely — every thread, stitch and button. We guarantee to return your money or give you a new garment if any seam breaks.

The Keeley Institute, Dwight,

"Been on a vacation bill?"

"No, Jim — I've stopped smoking. Gained six pounds in a week. You know how I used to smoke—a package of cigarettes and a cigar or two a day. It sure had some hold on me. But I'm cured—tore a scientific home tobacco treatment—fixed me up in two weeks.

"Wasn't hard on me at all—noticed improvement the first day—I feel like a new man. It didn't interfere with my work—didn't leave any druggist aftereffects—the money I saved in the last two weeks has paid for the treatment alone.

"Why don't you take it? It has cured men like you and me for over forty years— it is a doctor's individual prescription that sure fixes you up. Just send the coupon for full information NOW. No obligation. All correspondence is strictly confidential."

Please send me, without any obligation on my part, your free booklet which will tell you how to rid myself of the tobacco habit.

**Agents—Free Proof You Can Make $60 a Day**

YOU know how Oil Burners—devices which make any stove a gas stove—have taken the country by storm. First the Navy used them. The gas they made was so superior to coal that they were then adapted to HOUSEHOLD use. One part of oil (kerosene), the cheapest fuel known, was mixed with twenty times its bulk in air. This made a hot, clean, intense gas, cheaper than city gas. Inserted in any stove in a minute, they did away with dirty coal and cut housework in half. The very first device sold like wildfire.

The **"Ford" Among Burners**

Then six months ago came the device known as NU-HEAT. It was based on much later discovery, which eliminated unnecessary parts and made a better burner at a CHEAPER price. One user says, "It is the "Ford" among gas making devices but it has Twin Six efficiency.

The sales records made by the earlier burners were eclipsed completely by the records established by NU-HEAT Agents. They could offer the best burner of all at a price so low that everybody could afford one.

No wonder our agents found NU-HEAT the biggest money maker they ever handled. Laurence Harcum of W. Va. made $240 in one week! Mrs. Laura M. Drabon of Tenn., now makes more than her husband and Harley Jackson of Maan, earns $15,000 a year! Many others make $150 and more a week.

**Full or Spare Time**

We can offer good agents in every section the biggest earnings of their lives. If you want a PERMANENT connection that should double or treble your present earnings write us today for the wonderful story of NU-HEAT profits. Mail coupon for free sample case offer and exclusive territory. No capital required.

TYPEWRITER SENSATION!

Free Trial—Use as You Pay

After trial send us only $4.80 a month until the total price of $46.80 is paid, and the machine is yours. This is absolutely the most generous typewriter offer we ever made. Do not rent a machine when you can pay $4.80 a month and own one. Think of it—Savings a $180.00 Machine for $46.80. Cash price $39.55, just a little less than half its original price.

REMITON

Monarch

Perfect machines. Correspondence size, Keyboard of Standard Universal arrangement, 42 Keys, writing 84 characters. The entire line of writing completely visible at all times, has the tabulator, the two-color ribbon, with automatic reversal, the backspace, variable space, self-starter, in fact, every late style feature and modern operating convenience. Comes to you with everything complete—tools, cover, operating book and instructions—nothing extra to buy. You cannot imagine the perfection of this beautiful reconstituted typewriter until you have seen it. We have sold to hundreds of these fine machines at this bargain price and every one of the thousands of satisfied customers has found this typewriter, strictly up-to-date machine on five days' free trial before deciding to buy it. We will send it to you F. O. B. Chicago for five days' free trial. It will not come, but if you are not satisfied in the five days, return the typewriter, and we will give you all your money back, so you get the typewriter you ever saw, you can return it at our expense. You won't want to return it after you try it, for we are sure you cannot equal this wonderful value anywhere.

Send No Money! $480

Put in Your Order Now

After Trial

When the typewriter arrives deposit with the express agent $4.80 and take the machine for five days' trial, to prove to you that it is the best typewriter you ever saw, tried, or heard of. If you don't want it, return it to the express agent, return your $4.80 and return the machine. We will pay the return express charges. This machine is guaranteed just as if you paid $100.00 for it. It is standard. Over half a million people own and use these typewriters and think them the best ever manufactured.

The supply at this price is limited, the price will probably be raised when next advertisement appears, so don't t'wait Fill in the coupon today—the typewriter will be shipped promptly.

There is no red tape. We employ no solicitors—no chained mortgages. It is simply understood that you return to the machine until full $46.80 is paid. You cannot lose. You will probably never have a greater typewriter opportunity. Do not send us any money. Get the typewriter in the mail today—send

Young Typewriter Co., 560 S. Randolph St., Chicago

Young Typewriter Co., 560 S. Randolph St., Chicago

Silk or the Remington Monarch Typewriter, F. O. B. Chicago as described in this advertisement. I will pay you $4.80 monthly as rent until the $40.00 balance of the SPECIAL $44.80 sole price is paid. The title to remain in you until fully paid. It is understood that I have five days in which to examine and try the typewriter. If I do not want to keep it I will return it to the express agent. It is understood that you give the standard guarantee.

6 MAIDEN LANE - NEW YORK
Beat 'em all with Auto-Wheel

You can beat 'em all, race or no race, if you are "driving" an Auto-Wheel—the speediest boys' coaster. Winning is dead easy. Only another Auto-Wheel can give you any competition.

It's the self-contained, friction-reducing roller bearings which make an Auto-Wheel Coaster go so easily that it seems to be running itself. But roller bearings are only one of the many superior features in the Auto-Wheel Coaster.

Some of the other features are: rubber-tired disc wheels (3 largest models have over-size tires); steel-tired disc or wood spoke wheels if desired; all wheels interchangeable; hound brace; hand brake; special hub cap and loc'ing pin; sides mortised as well as nailed. Every one is a reason why live boys prefer the

Auto-Wheel Coasters and Auto-Carts

Write for Catalog which shows all models of the Auto-Wheel and also all models of the Auto-Cart, the Auto-Wheel's junior companion for your little brother and sister. If you send the names and addresses of three local coaster wagon dealers, telling which ones sell the Auto-Wheel, we will give you a year's subscription FREE to the "Auto-Wheel Spokesman," a dandy little magazine for a boy like you.

BULLDOG Pipeless Furnace

Only

$10

Puts the BULLDOG Pipeless Furnace in Your Home!

Then Only $10 a Month!

If you are even thinking of a furnace, write for our free catalog. The Bulldog is one furnace you must investigate. Heats without pipes! Comes completely erected. An extraordinary development in heating, Factory connections in both East and West. We ship from nearest point. Write for catalog before you forget.

Two Hours to Install

You do it yourself with nothing but a hammer and a saw. Rectangular shape (one of the common sense principles) allows passing through any door. Don't consider buying any furnace until you learn about the Bulldog!

Fits Any Floor Height

No matter what the depth of your basement or cellar may be—The Bulldog fits it. The adjustable casing (another common sense feature) takes care of this. When you read our catalog you will agree that this alone should be sufficient to influence you to choose the Bulldog. Mail this coupon TODAY!

Babson Bros. 19th and California Sts., Dept. 137 Chicago

Without obligating me in any way, please send me your free catalog and $10 down offer on the Bulldog Pipeless Furnace.

Please Mention Popular Mechanics
Science conquers the cold of the Arctic circle! Donald MacMillan, the great explorer who went to the North Pole with Peary, has adopted OXO-GAS in preference to all other methods of heating submitted. Heat for two years stored in smaller space and at a cost far below that of any other fuel. OXO-GAS will keep explorers thoroughly comfortable, provide heat for cooking and reduce work to a minimum. OXO-GAS has reduced fuel space to such an extent as to make it possible to install a complete broadcast and receiving radio outfit, thus keeping the explorers in touch with the world.

Gloria Light Company
112-118 S. May St.
Chicago, Illinois

Attention of Mr. Robert L. Doran

Gentlemen:

I want to thank you for the complete outfit of burners sent to me for the soman in my forthcoming Arctic expedition.

It is true that after complete tests we decided upon your apparatus, but nevertheless I want to thank you for the extreme care exercised in sending up additional parts. I feel sure that great comfort will be experienced by us through the use of your burners and fuel oil rather than coal.

Sincerely yours,

[Signature]

Wiscasset, Maine.
June 21, 1923

MOST EFFICIENT FUEL KNOWN TO SCIENCE

OXO-GAS is made from Kerosene, Stanolin or Distillate.

THE VAPOR (4%) is mixed with air (96%).

THIS MIXTURE creates a non-carbon blue flame of high heating intensity.

WHICH HEATS indestructible perforated lava discs to incandescence, thus increasing the heat units of the fuel from 25 to 30% by refraction.

WILL OPERATE from eight to ten hours on one gallon of Kerosene, Stanolin or Distillate. Two gallons of kerosene (according to Government tests) will make heat units the equivalent of 1000 feet of city gas.

FIFTY GALLONS of kerosene equal to a ton of the best coal, a cord of wood or 25,000 feet of gas.

OXO-GAS is, in fact, the only logical substitute for the diminishing supply of coal with its consequent high price!

These two cuts show all there is to a complete outfit: The Heater, which is put in the stove, without making any alterations, and the tank to hold the oil. A small, flexible pipe conveys the oil to the Heater, where it is converted into OXO-GAS.

OXO-GAS is the only fuel delivered anywhere in any quantity. The oil man can serve ten customers cleanly and efficiently while the coal man serves one.

OVER A MILLION OXO-Gas plants are giving incomparable service to delighted users for cooking and heating.

OXO-GAS appliances are absolutely guaranteed by a responsible corporation. References: Dun and Bradstreet Mercantile Agencies or any bank in the United States.

OXO-GAS is equally efficient Summer or Winter. An abundance of heat in the Winter. Cooler than any other method of cooking in the Summer, because the heat can be shut off instantly when not in use.

SEND FOR CATALOG illustrating and descriptive of twenty different, distinctive designs of heaters for all purposes.

Agents Wanted Some choice territory for Oxo-Gas agencies and distributorships still open to thoroughly responsible parties. Your own locality may yet be unassigned. If you can qualify, we offer you a genuine opportunity to make $10,000 a year and more. Just write and ask us for our agent's proposition, and we will discuss the matter with you either by mail or in person.

Gloria Light Company
90-98 North May Street
Chicago, Illinois
When the ribs and fly-wheel of this big machine cracked across, the necessary repairs were made by electric welding in three hours actual time.

The needle that knits metals

There was a time when a broken wheel would tie up a big plant for days.

Now electric welding tools literally knit together the jagged edges of metals and insure uninterrupted production. That means steady wages, steady profits, and a lower price to the consumer.

GENERAL ELECTRIC
Boys!

These are perfect working models

THINK of the fun of operating a complete Railroad System, all your own! One that is an actual reproduction, down to the tiniest detail, of the most up-to-date railroads in the country.

Ives Railroads are perfect working models. There are powerful electric passenger engines, husky freight locomotives; parlor-cars, coaches and observation cars; mail and baggage cars; box-cars, tank-cars, cattle-cars, gravel-cars. You don't know what fun is, until you operate your own Ives Railroad.

If you're interested in ships, start an Ives Fleet. There are great liners, freighters, tug-boats, submarines, destroyers, pleasure crafts and racing yachts. All working models of the real thing.

Send for this book

SEND 10c in coin or stamps with your name and address and we'll mail you a beautifully illustrated book with 12 pages in full color that tells all about Ives Trains and Ives Boats.

Differences Between Safe and Unsafe Bonds

There are 8 requirements that every bond must have to insure the safety of the investor's funds. If a bond will pass every one of these 8 tests it may be identified as presenting the maximum of safety to the investor. If a bond will not pass one or more of these tests, it is lacking in the elements of safety that every conservative investor should insist upon.

These are the differences between safe and unsafe investments — the elements that characterize the difference between the successful and haphazard investing of funds.

Every Forman Bond has passed fully these 8 tests. Absolute proof of the safety of Forman Bonds is the successful handling of the funds of thousands of investors over a period of 38 years without the loss of one cent to any customer.

Out of this long and successful experience we have published an interesting booklet "How to Select Safe Bonds" which tells how to make the 8 tests that prove the safety of every investment. Every investor, large or small, should have a copy of this booklet. With it you will not only be able to test the safety of every investment scientifically, but you will be enabled to secure a larger income without any sacrifice of safety.

YOURS—FREE MAIL THIS COUPON

We have a limited edition of this booklet. It will be mailed only to those who ask for copies on the request blank below. Fill in, tear out and mail today.

Tobacco Is Hurting You

Look at the facts square in the face, Mr. Tobacco User. You may think tobacco is not hurting you.

That is because you haven’t as yet, perhaps, felt the effects of the nicotine poison in YOUR system. For you know that nicotine, as absorbed into the system through smoking and chewing tobacco, is a slow working poison. Slow, yes—but sure.

Tobacco is lowering your efficiency. It slows a man down. Makes it harder for you to concentrate your mind on your work. You haven’t near the amount of ‘pep’ and energy you would have if you stopped using it. There’s many a man twice as old as you in years who’s twice as young in energy, simply because he lets tobacco alone.

Some day you will realize to what an alarming extent tobacco has undermined your system.

Tobacco Habit Banished
Let Us Help You

It doesn’t make a particle of difference whether you’ve been a user of tobacco for a single month or 40 years, or how much you use, or in what form you use it—whether you smoke cigars, cigarettes, pipe, chew plug or use snuff—Tobacco Redeemer will positively remove all craving for tobacco in any form in a very few days. Not the slightest shock to the nervous system. Your tobacco craving will usually begin to decrease after the very first dose—there’s no waiting for results.

Tobacco Redeemer contains no habit-forming drugs of any kind and is marvelously quick, scientific and thoroughly reliable.

It is in no sense a substitute for tobacco. After finishing the treatment you have absolutely no desire to use tobacco again or to continue the use of the remedy. It helps to quiet the nerves and make you feel better in every way.

Results Guaranteed

A single trial will convince you. Our legal-binding, money-back guarantee goes with each full treatment. We will refund every cent you pay for the treatment if after taking it according to the easy-to-follow directions, it should fail to banish the tobacco habit completely.

SEND Coupon for Free Proof

Let us send you our free booklet on the deadly effects of tobacco, together with testimonial letters from men all over the country telling how they have been absolutely freed from the tobacco habit by this simple home treatment. You could not ask for stronger proof that Tobacco Redeemer will free you from the habit than the evidence we will gladly send on request. Just mail the coupon—or a postal will do.

Will a Ford Go 66 Miles on 1 Gallon Gas?

Or Other Make Do Equally Well?

A remarkable invention known as VIX Vapor HUMIDIFIER has been patented in this and foreign countries by Walter Critchlow, Suite 357, 716 Madison, Chicago, Ill. The success of this wonderful device is shown by several thousand reports received from users of the HUMIDIFIER, from which the following few were selected.

Geo. B. Cousins, of Ills. “Last Sunday with the VIX on, we drove from Chicago to the lake, 66 miles, with a stop of 10 minutes. The car was recharged, and the car operated as usual. The car is now back in the garage, and the VIX is ready for another day’s run.”

D. D. Workman, of Kansas, with CUDAHY PACKING CO.: “I have been using the VIX for 2 weeks, and as far as I can determine, the car has run as smoothly as usual, and the engine has run as it should. The VIX is the only way to go.”

B. P. Porter, of St. Louis, Mo., President Porter Adjust- ment Co. “On Sunday drove to Terre Haute, Ind., and return, 372 miles, used 15 2/3 gallons of gas, average 32 2 10 miles per gallon, which I consider wonderful.”

Charles McClain, of Iowa, Truck: “My truck used 35 to 40 gallons of gas a week last week on the same run with the VIX on, and used 20 gallons. Going to put them on my other trucks.”

Mr. Wheeler, Calif.: “I get from 35 to 38 miles to the gallon with my 1920 Ford and the VIX Vapor HUMIDIFIER I got of you two years ago.”

Mr. Critchlow has well over 2,000 similar letters touching every phase of car operation from proud users of all makes of cars. He states that the HUMIDIFIER will do these things: 1—Eliminate the carbon from your motor, and then keep it free from carbon, and all carbon trouble in the motor; do away with frequent spark plug cleaning, and valve grinding from carbon pitting. 2—Cool the motor better, by relieving the vapor pressure in the radiator, and by cleaning the motor and giving a perfect clean running engine. 3—Use less oil; authentic tests show 10% to 33 1/4% saving in used. 4—Use less gas; authentic tests show saving of 3/4 to 3/2 gas required to go certain distances; many users report even greater savings.

Mr. Critchlow gives one HUMIDIFIER free to help introduce it. Every Car Owner should write for one. Give make of car. Address Walter Critchlow, Suite 357, 716 Madison, Chicago, Ill.

9 cords in 10 hours by one man. It's King of the woods. Catalog X115 free. First order gets agency. Established 1890.
Every Man Likes To See—Every Man Wants
A KRIS KROSS STROPPER
UNDER OUR
NEW SALES PLAN

Selling is 100% easier and you may
MAKE $2 to $500 or More
From One Small Sale, Without Any Further Effort on Your Part

HERE AT LAST IS A REAL SHAVING COMFORT
Just show a Kris Kross Stropper to any man. He will instantly
reach for it. He can’t help wanting to operate it. The way the
blade automatically rises and reverses itself—brings the other
side to the leather, appeals to the mechanical instinct of all men
and causes them to ‘sit up and take notice.’ Everyone wants
the Kris Kross on sight because he instantly knows it is the first
stuffer ever made that has the right principle in stropping—the
barber’s diagonal stroke and adjustable pressure for dull or sharp
blades. Our men have already established records of five sales
in four minutes on one canvas, to 33 sales in one day. As this
Adv. was being written we received a letter from an auditor who
contracted to put in part time. He wrote: “Enclosed you will find
eight orders taken today, my first trial, in less than 15 minutes.”

RHODES MFG. CO. 4230 Cozzens Avenue ST. LOUIS, MO.

Make Big Profits
Small cash payment brings you HB 8 hour charging outfit. Easy terms of
only $30 monthly; let your profits pay
balance with nice surplus besides. Thirty day free trial on money back
guarantee lets you try HB outfit at your
risk. HB patented voltage-regulating winding absolutely prevents revers-
ing. Saves current. Start now to
make big profits with HB 8 hour bat-
ttery charger. Write today for information.

It Bridges the Vastness of Space

Since Marconi first successfully spanned the Atlantic Ocean, with the wireless telegraph, radio has ever been outstanding as an invention of unlimited importance to humanity.

In 1900 the broadcasting of that now famous distress call, CQD, from the sinking passenger liner, S. S. Republic, established in the eyes of the entire world the tremendous importance of radio on the high seas.

In 1912, when that gigantic liner, the S. S. Titanic, struck an iceberg far from shore, in the north Atlantic, with thousands of passengers aboard, it was the SOS call of her wireless that brought rescue ships from all parts of the ocean. Here again radio demonstrated to the world its great service in the saving of human life.

During the war communication controlled the destinies of armies. Here radio played an exclusive part in the establishing of communication between ships at sea, from ship to shore, and from aeroplane to ground, where the use of wires was impossible.

In recent years the development of the vacuum tube has not only improved radio for the purpose of marine, commercial and military communications, but through radio telephony and public broadcasting, has established a new and even greater service to humanity.

Cunningham Vacuum Tubes are the product of years of research and experimental work by the Engineers of that great scientific organization, the Research Laboratory of the General Electric Company.

Cunningham Tubes are standard for all makes of radio and receiving sets. Each of the numerous types have been designed to operate with maximum efficiency in one or more of the various applications of vacuum tubes to the radio art.

GET ACQUAINTED WITH

LEFAX The Modern Method of Making Your Own Handbook

There is just one way to get a handbook that fits your needs exactly, and doesn't contain anything but what you really have use for—and that is, to make that handbook yourself. Lefax Data Sheets contain the best technical information, tables, etc., to be found anywhere, and you can take out or rearrange any sheets whatever, in any way you wish, or insert any other kind of sheet: blueprints, photographs, or your own notes or diagrams, made on the blank sheets which can be obtained in over 100 different styles. All these are 3 1/2 by 6 1/4 in. in size and fit any of the binders. Lefax is simply the principle of "Interchangeable parts" applied to the collection of the FACTS which are the tools that the technical or business man works with. Facts on leaves—LEFAX. Drop us a line today requesting complete information and price list.

Day-dreaming led many a man to make plans that brought him big success. Don't be ashamed when your thoughts are wandering away, when you dream that you are a leader of men—a doer of big things in the business world—builder of lasting structures. Your day-dreams are an indication of your ambition and of your desire to accomplish things. The man who never dreams has no imagination, he will not get very far. But you can make your dreams real—You can materialize your ambition.

Just dreaming alone won't do. Hitch your dreams up to facts and you will go far. You will get the facts through special training along the line of work which you want to succeed. And the place to get just that training is the American School. This is proven by the quarter of a century of successful experience we have in helping thousands of men and women gain an enviable place in the business and social life.

Another reason why the American School is the place to get your training—it is not a business corporation but a chartered Educational Institution, incorporated not for profit.

Space here is too limited to tell you of all the advantages you will gain by getting your training from the American School, but the coupon will bring you full information and a descriptive book, without cost or obligation to you. Fill out and mail the coupon NOW, while you are thinking about it. No agents will bother you.

AMERICAN PRODUCTS CO., Dept. 8892, Cincinnati, Ohio.
Amazing New Lamp Burns 95% Air

Cheaper Than Gas or Electricity

Announcement was recently made by Theodore Nagel, well-known inventor of gasoline and kerosene lamps and lanterns, of the discovery of “Thena” metal, a secret process metal which dwarfs all other improvements ever made in artificial lighting. “Thena” metal makes possible an automatic cleaning device in kerosene lamps and lanterns so sensitive and yet so durable that ordinary coal oil can be used to make a light as white, soft and brilliant as city gas or electricity.

For five years Mr. Nagel tried every metal known to science to perfect a cleaning device which would forever end the inconvenience and expense of replacing generators and make possible the use of kerosene fuel where electric lights are either not to be had or too costly for ordinary use. The result is “Thena” metal which insures watch-making accuracy in Wizard lamps and lanterns. The surprising part is that these wonderful lights cost no more than ordinary ones and yet are guaranteed for years of service.

The wonderful story of his discovery, the tale of sleepless nights, countless laboratory tests, and finally the manufacture of Wizard Lamps and Lanterns, the only product of the kind in which such marvelous results are possible, will be sent to any one who will inquire of The Nagel-Chase Mfg. Co., 242 E. Erie Street, Chicago. An invitation is extended to visit the factory and witness a practical demonstration of the lamp itself. Agents, dealers, farmers, home owners everywhere pronounce this the greatest contribution in recent years to home comfort.

FORD

“OILDUCT”

makes the filling of your Ford Car with oil easy and very simple. It prevents oil from being wasted. Keep your oil on all the time. The oil is easily removed. Keeps oil off the engine and radiator. The oil is used up quickly. The oil is clean and does not get on your hands.

Simply remove your oil filler cap and in two seconds the “Oilduct” is permanently attached and securely in place, ready whenever you put more oil in your car.

Saves its cost in oil every month. Send $1.00 bill and the “Oilduct” will be sent you postpaid. Dealers write for discounts.

Don't Fuss With the Musc of Old Kerosene Lamps and Lanterns

New Bright White Light For Every Home

Wonderful Invention

I have made it easy for every home to have bright, cherry, healthful light—in cities, villages and on farms—anywhere—at a price all can afford. No more need you put up with the dingy, smoky, foul-smelling oil lamps and lanterns. No more do you need you put up with the drudgery of cleaning and trimming greasy, dirty wicks and chimneys. For less cost than you would pay for a good oil lamp you can have an abundance of brilliant, white light—20 times brighter—for every room in the home or for outdoor chores.

300 Candle Power

—is better than electricity or gas for economy, brightness and quality of light. Burns 96% Air—Only 4% cheap gasoline or kerosene (coal-oil). Produces a light bright as daylight. Soft, mellow, easy on the eyes. Lights with match as quickly and easily as old-style lamp. Simple to operate and positively safe.

Greatest advantage in home and farm lighting in a century.

30 Days Trial

I want to put at least one of these Lamps or Lanterns in every home. I am making a sensational introductory offer to do it. I back it with my 30-day trial guarantee. You try it without a penny of risk. I take all the responsibility. The coupon, a letter or post card brings this offer and the attractive, descriptive catalog FREE, from which you can select any one of the many handsome designs. Be first in your locality to write and get this liberal money-saving introductory offer. Send your name and address today.

Run 22,000 miles on tires that leak no air

A new Airthight, Puncture-Proof Inner Tube which in actual test ran 22,000 miles without the loss of air, although punctured many times, is the proud achievement of P. M. Hughes, of the Airlox Rubber Co., 2053 Jackson Blvd., Chicago. It is inflated with air and has a leak-proof valve-cap. Both puncture troubles and valve leaks are banished enabling one to keep tires up on proper air pressure, and hence double casing mileage. Yet, Airlox Tubes cost no more than ordinary tubes. If you want to try these wonderful tubes write P. M. Hughes today as he wants them introduced everywhere. Liberal offer to Agents. Write at once.

Sells for $1.25 AGENT'S SAMPLE 65c.

**We Want Agents at $50 to $90 a Week**

New Invention—Just out. Needed in every home every day. Patented. Nothing else like it. Low priced—**Sells on sight**. Sharpens any kitchen knife, paring knife, carving knife, bread knife, or shears and scissors in **ten seconds**. Mechanical masterpiece. A child can use it. Just put knife in slot—turn crank—sharpens both sides at once automatically. We want representatives at once—men and women hustlers. Get this position where you profit from first day.

**No Experience Necessary—200% Profit**

Make as much money next week as these men are making now. J. C. Lewis, of Kansas, says: "I have sold one hundred sharpeners in four days." Herbert Kinn, of Mt., writes: "The women can hardly wait till they get them." Herbert Cash, of Ky., sold nine after supper. At the end of the first day, J. W. Gorton, of Pa., writes: "I sold twenty and I sold out in an hour. I saw," Wm. G. Hall, of N. J., says: "I think it is great. I sold six in about one-half hour. This machine is a mighty fine proposition, I am a mechanic and I tell you about it." You can make this money. WRITE TODAY. TERRITORY FREE. Get busy at once,

**QUICKEDGE SHARPENER CO.**, 110 Sharpener Bldg., 159 West Pearl St., Jackson, Mich.
Great Fun for Boys—From Four to Forty!

You will keep young in joining your boy in operating his new Lionel Electric Train—will get as much fun out of it as he does.

And the youngster will simply glory in it—his playmates will beg for a chance to "get in" on the game—you'll be down there on the floor yourself. It's the most fascinating Toy ever invented, and the most instructive one.

You can buy a Lionel Electric Train for as low as $5.75, or, you can give your boy a larger locomotive and track and add to it as you wish.

The best Toy, Hardware, Sporting Goods, Electrical and Department Stores carry Lionel Electric trains and accessories. Send for handsome, new Lionel catalog, printed in colors, full of up-to-date miniature electrical equipment. It's free.

Genuine "RADIOLA"
Made by Westinghouse for the Radio Corporation of America

OUTFIT COMPLETE:
$5.00 DOWN
Puts it in Your Home

Balance in Easy Monthly Payments
Regenerative Receiver and 2-Step Amplifier

Now everyone can have the finest radio receiver and amplifier that is made. No need to put up with inferior equipment. For here we are offering you the set designed by the great Radio Corporation, the highest authorities in the industry—and built by the Westinghouse Electric Company. It comes to you complete with all the accessories you need, for just a five-dollar payment. Take advantage of this new way of selling radio. Get an outfit that will give you permanent satisfaction. Send the coupon below for our Great Special Offer, made for a limited time only.

The Perfected Radio At Last!
So simple to tune that it is just the thing for the beginner. Yet so perfect that it will delight the most hardened "radio fan" who has long been searching for the ideal circuit. Its long range will bring in stations never heard before, so loud and clear that a loud speaker will delight the whole family. Wonderfully selective. With it interference, internal noises and annoying body capacity are forgotten.

Send Coupon for Special Offer Circular
Just mail the coupon. Get all the details without any obligation. Don't think of buying an ordinary set without finding all about this new and better way. Very easy terms. Free Trial. The highest quality of radio equipment possible to have.

Babson Bros., Dept. 13-57
19th St. and Marshall Blvd., Chicago, Ill.

No Accessories to Buy
The radio outfits we sell are absolutely complete. Most others make an offer on the bare set and leave you to buy all the extras like tubes, phones, etc. in addition. The outfit we offer you now includes the Regenerative Receiver and 2 step Amplifier all enclosed in a solid mahogany case. Also the batteries, head-phones, tubes, aerial, lightning arrester, and full wiring installation equipment. You start operating without investing another single penny. Your $5 payment brings it all.

WD 12 Tubes and Dry Cells Reduce Upkeep to Almost Nothing
Equipped with 3 of the latest type of dry battery tubes, WD 12 tubes use only ½ ampere. Most perfect tube both for detecting and amplifying. Battery expense reduced to the absolute minimum.
Agents—District Managers—Distributors to Make $2,500—$3,000—$15,000 and More Selling SECURITY Check Protecting Fountain Pens

Never before in the history of direct selling field has such a wonderful opportunity been offered to Specialty Salesmen to engage in a business so splendid and unlimited possibilities.

JUST THINK OF IT! One out of every seven persons in the United States purchased fountain pens last year—16,000,000 in all. More will be sold this year and many more next year. WHY?—Because, while years ago a fountain pen was considered an article of luxury it has now become an absolute necessity, indispensable to every one who writes.

When you hear this in mind, you will readily appreciate the wonderful possibilities of the SECURITY as compared to the ordinary fountain pen on the market. It is based on the merit of its novel and patented features which give it a smooth and excellent writing qualities, but also on account of its unique, peerless Check Protective Features. Have you ever considered the cost of security for many times the price of the pen, adding tremendously to its advertising value and overcoming all possibilities of sales resistance.

Manufactured in our complete and daylight factory under the same roof by a group of competent, dedicated, highly paid, contented and profit-sharing employees with a long experience in the fountain pen industry, the SECURITY offers a product of a quality never known, a class all by itself.

No wonder it is becoming more and more popular every day and we have enjoyed such a meteoric success in a short period of ten months, ever since we inaugurated our new merchandising plan of selling through the salesmen direct to the public.

Having the distinction of possessing entirely new and superior features protected by six patents the SECURITY is placed in the non-competitive field, and although normally priced at $10.00 and upwards, the SECURITY costs no more than ordinary fountain pens on the market with an insignificant difference in their qualities.

AGENTS—DISTRICT MANAGERS—AND DISTRIBUTORS

Think of the wonderful opportunity that this Pen offers as a money making selling proposition!

Think of the millions of men and women throughout the Country who have individual checking accounts and who have no means of protecting their checks in spite of the fact that $3,500,000 was lost last year in raised checks—forgetting all about alterations of negotiable securities due to this negligence. NOW YOU CAN PROTECT YOUR CHECKS WITH A SECURITY NO MATTER WHERE YOU MAY HAPPEN TO BE. Think of the millions of men and women students who write! Each and every one is a splendid prospect for the SECURITY.

Think of the small business man, the store keeper, the lawyer, preacher, doctor, Real Estate man and farmer—he all have checking accounts and all are good prospects for the SECURITY.

Even the big business men, Bankers and executives are excellent prospects for the SECURITY for they have their personal checks and in their own words, they say, "We want SECURITY for our personal checks which they write away from their business places, at home, cash, or when travelling."

This is the best time of the year to get into the fountain pen business. More pens will be sold during the next four months than has ever been sold in any time of the year, and quite a large percentage of these will be SECURITIES.

Now is the time to help me place a SECURITY in the hands of every business and professional man and woman in the United States and eventually in the hands of every one who writes.

Can this be done? Yes it can and will be done.

This is not the moment to be looking for business, but must be hard working, ambitious, enthusiastic and perseverence. Of course I don't promise to make you rich within six months or a year or two, but I promise to show you how to make a clean up over night, because our proposition is not of that nature. But if you possess the above qualifications and are willing to devote your time and energy for the sake of development and growth of the SECURITY business and also for your own a steady and comfortable income that would grow tremendously each year as the SECURITY becomes more known, it is my aim and purpose to establish it as a successful and permanent business, all of your own, in your protected territory without any of ours.

If you are not satisfied in just making a fair living and wish to have an incentive and are anxious to better your condition, if you are not afraid of hard work and persistent effort, then you are the man I am looking for and any proposition will interest you, because the SECURITY is destined to be the leader in the field.

Of course we can't accomplish this in six months or a year, but when I get the right kind of men behind this movement and all of us working closely together, we can accomplish it to the fullest extent, we are bound to put the SECURITY over in a big way and our efforts will be highly rewarded.

CASH REQUIREMENTS

In order to avoid any possible misunderstandings and assuring that I am not at all anxious to take up your time or mine by corresponding and for the purpose of keeping away the curiosity seekers I will endeavor to make our proposition very clear in every way.

If you wish to become an Agent and wish to devote part or all of your time to the SECURITY you must have a capital of at least $17.15 to enable you to start off on a proper footing which will start you on the road to success.

As soon as you have proven to us your ability to successfully distribute our product I will make you a proposition offering you exclusive territory of from 10,000 to 50,000 people.

If you wish to act as a District Manager and be placed in a territory where there is an available sales force and can finance yourself to the extent of from $150.00 to $500.00 we will allow you the exclusive sales rights for the SECURITY in within a territory ranging approximately 10,000 people. If you wish to act as our Distributor, have had experience in organizing and maintaining an efficient sales organization and are in a position to finance yourself to the extent of from $1,000.00 to $3,000.00 we will grant you the exclusive sales rights within a territory ranging from having a population of from 1,000,000 to 5,000,000.

Attention: We do not recognize any territorial rights. Your capital is to be always under your control and to be used strictly for the purchase of pens and furnishing suitable office quarters.

I have endeavored to make our proposition very clear and now that you have the facts before you if you think you are the man that can represent us in either the capacity of an Agent, District Manager or Distributor and are willing to put your card on the table, then I am sure we can come together and will be glad to show you how you can make some real money and consider it a pleasure to be associated with our progressive organization.

When writing please don't say I wish to act as Agent, District Manager and Distributor, but merely state your position. I will make you an offer only if you can furnish yourself to the extent of from $150.00 to $500.00.

If you wish to act as a Distributor I will make you an offer only if you can furnish yourself to the extent of from $1,000.00 to $3,000.00. If you are not afraid of hard work and persistent effort, then you are the man I am looking for and any proposition will interest you, because the SECURITY is destined to be the leader in the field.

NOTE—Please do not ask for Credit, Free Samples or Samples at wholesale prices. We do a strict cash business.

If you desire to see the SECURITY before taking further action, send with your letter check or money order for style wanted and a complete demonstrating outfit will be forwarded to you free of charge to be returned with sample pen.

After you receive the pen, examine all the parts, noted the simplicity and strength of construction and followed carefully the directions relative to filling and the relative to the filling, and then go through trial we are confident you will agree with us that the SECURITY is all we claim it to be. Then go out and show the pen to your friends and acquaintances, also to your banker, get their opinion and let them be the judges. In the event however you are not completely sold on its merits and are not thoroughly pleased with the pen, return it to us at our expense and the entire purchase price will be refunded you without any ifs or ands.

JOHN H. KRITTIKSON, President.

TWICE THE HEAT AT HALF THE COST

Heat the New Way—On or Off With the Turn of a Valve

Think of having instantly all the heat you want IN ANY STOVE without building fires, without kindling, ashes, dirt, or ashes. Think of having—at the touch of a finger—a fire that is three times hotter than coal—or just enough to simmer a kettle. A fire that stays where you want it—high or low.

THREE TIMES HOTTER THAN COAL

Think of the wonder of it, the comfort, and the beauty. Men do work with such a fire, think of the better health and comfort the family will enjoy when you can keep every room in your house warm, when you want warm and cozy, day and night, in any weather. These are but a few of the advantages enjoyed by users of a remarkable invention—INSTANT-GAS—CHEAPER THAN COAL

A scientific combination of 90% superheated air and 4% Kerosene (common coal oil)—the cheapest and safest fuel known. It is produced by an amazing invention which, in one minute, can be blown into the fire-box of any coal or wood stove. All the convenience of gas at half the cost.

Start with the Turn of the Valve

Turn high or low to suit, heat your home, do your cooking and baking, and then stop with another turn of the valve. A child can operate it. Instant-Gas gives a clean, steady, dependable fire. No ups and downs to give the family influenza and pneumonia, no running out into the cold to fetch coal or wood, no fallen cakes or sodden biscuit from an uneven stove. Saves cleaning bills, doctor bills, and paper and curtains.

Works in Any Stove—Old or New

No holes to drill, no injury to stove, installed in a few minutes, makes old stove work like new, and makes a new stove twice as long. Lasts a lifetime. For many years the markets have been flooded with oil burning devices—but a scientific improvement in the application of oil burning principles makes the Instant-Gas Oil Burner the one great, outstanding success of its kind. Yes it costs no more than inferior cut-of-date makes. Money-back guarantee gives you absolute protection.

TRY IT IN YOUR HOME FOR 30 DAYS FREE

Test the Instant-Gas for yourself, try it in your own stove at our risk for 30 days, see for yourself how much superior Instant-Gas is to any other fuel, how much money it saves, how easy it is to turn on and off, how much cleaning and scrubbing it saves, how much warmer you can keep your home, and how much better cooking and baking you can do. Join the hundreds of thousands of Instant-Gas users who have gained health and strength by cutting their work in half and doing away with the heavy, dirty, back-breaking coal and wood. Mail coupon today for 30 day trial offer and amazing new book "Scientific Oil Burning." No obligation. Special introductory price to those who mail coupon at once. Mail yours today.

Three Tubes Is All You Need

With Erla Synchronizing Transformers

Transcontinental reception, through a loud speaker, is assured when you tune in with the new Erla Triplex circuit, using three vacuum tubes and Erla synchronizing radio and audio transformers.

Results obtained surpass conventional six and seven-tube circuits in range and volume. Moreover, tone quality is remarkably improved, with complete absence of parasitic noises.

For all except the most distant stations, outdoor antenna can be dispensed with, an inside aerial serving equally well. Wet batteries, likewise, are no longer essential, low current consumption enabling satisfactory use of dry cells.

Accounting in large measure for the amazing efficiency of this circuit, and guaranteeing its success, are Erla synchronizing transformers. For the first time, perfect time relationship and co-ordination between transformers has been secured in reflex work, producing unequalled amplification without distortion.

A further notable improvement is embodied in the new Erla fixed crystal detector. Providing maximum sensitiveness and purity of reception, with complete immunity to jolt and jar, it anticipates the costly vacuum tube for detector purposes.

Detailed working diagrams and descriptions of the Erla Triplex and other advanced Erla reflex circuits are included in Erla Bulletin No. 14, obtainable gratis from leading radio dealers. Or write us direct, giving your dealer's name.

“Mary, I Owe It All to You”

MR. WILLIAMS called me into his office to-day and told me he was going to raise my salary $50 a month.

"I am glad to give you this opportunity," he said, "for the best reason in the world. You deserve it.

"You may not know it, but I've been watching your work ever since the International Correspondence Schools wrote me that you had enrolled for a course of home study. Keep it up, young man, and you'll go far. I wish we had more men like you.

"And to think, Mary, I owe it all to you! I might still be drudging along in the same old job at the same old salary if you hadn't urged me to send in that I. C. S. coupon!"

How about you? Are you always going to work for a small salary? Are you going to waste your natural ability all your life? Or are you going to get ahead in a big way? It all depends on what you do with your spare time.

More than 100,000 men are getting ready for promotion right now in the I. C. S. way. Let us tell you what we are doing for them and what we can do for you.

Accurate, Clean Cut Graduations
The second point of superiority of Brown & Sharpe Micrometers

In the accurate, clean cut graduations lies the second point of superiority of Brown & Sharpe Micrometers. The first dividing engine to be used in America, for accurately graduating measuring tools, was built by Brown & Sharpe in 1850. 70 years of experience in accurately graduating tools together with the accurate machines which we have developed for this work give every Brown & Sharpe Micrometer graduations of superior accuracy.

Examine one of these tools at your dealers. Take particular notice of the graduation lines; they are clean cut, clear and straight and help produce the accurate measurements which mechanics look for and depend on in Brown & Sharpe Micrometer Calipers.

Write today for a copy of our No. 28 Small Tool Catalog. It lists over 400 styles of Brown & Sharpe Micrometers.

Central Auto Supply Co. Dept. 120, Louisville, Ky.
WITH the Amplion Loud Speaker the infinite clearness and softness of tone achieves an unsurpassed reproduction welcomed and admired everywhere. The human voice or musical sounds come to you in their true richness, without the slightest distortion, unalloyed—just as they are rendered.

It is hard to believe you are listening to reproduction. Originality is so unmistakably registered in every tone.

The Amplion is made by the world's oldest manufacturer of loud speaking instruments. It is not a head set receiver used as a loud speaker, but a development for radio purposes of a loud speaking device, used exclusively on every ship of the British and other leading navies.

The Amplion requires no battery. You simply attach it in place of head phones. The Amplion is being extensively used in every country mentioned in the border of this announcement.

That it has been adopted as standard by the leading countries of the world is the tribute it has achieved through its brilliant performance.

All models on view at the New York Radio Exposition, Booth 5, at the New York Show—Oct. 6th to 13th.

Many of our men who have been with us six months or more are averaging over $100.00 a week selling Simpson’s

All Wool Tailored To Order $31 50
Suits--Overcoats

We furnish 6x9 swatches of cloth—a real selling outfit, compact, easy to carry, easy to show and easy to sell. You’ll find heavy weight blue, gray and brown serges, and Frenchback worsteds, winter weight suitings, in all colors and patterns, mostly worsteds, but with a good showing of cassimeres, tweeds and checkiots. You’ll find a dozen topcoatings, and a wonderful assortment of overcoatings, including Meltons, standard kerseys, rug backs, through and through weaves, etc. Our fabric assortment is very fine. Remember, they are all one price, $31.50 suit or overcoat, all wool, tailored to order, any style, at no extra charge, and satisfaction guaranteed always. We ship by express, subject to examination, if so instructed.

Commissions Paid Daily
You Collect Deposit

We ship C. O. D. for the balance. Tailoring men write. We give protected territory. No deposit required on samples. We will train inexperienced men, with satisfactory references. You can do well right from the start, and when experienced, average $100.00 a week and up. Write us fully, in strict confidence. No references investigated without your permission.

It pays to sell a quality product with which you can build up a steady, permanent business. Actual figures based on experience of our men show that after six months’ work, from 35 to 65% of your business will be from previous customers or on leads furnished by them. Sales to old customers or to people recommended by your customers, are easy to make. If the line you now handle doesn’t bring you a heavy percentage of repeat orders, drop it and tie up with a line that will.

We believe ours is the easiest selling tailoring line in the United States. The fabrics are unusually attractive and the quality very fine. Every suit is pure virgin wool. The linings and workmanship are very fine. The fit is seldom equalled and never excelled even at much higher prices. Our fall line is better than any other line in our history—in spite of the fact that prices on wool have gone skyrocketing.

Salesmanager J. B. SIMPSON, Inc.
Dept. 657 831-843 W. Adams St. CHICAGO, ILL.
Eager get-away—the rushing acceleration of a zooming airplane—that's the 1924 Harley-Davidson, with its new aluminum-alloy pistons.

Lightning pick-up and sustained high speed, without overheating, are not the only features of the "1924". It's easier to care for (Alemite lubrication—first on any motorcycle). It's better looking than ever (olive green, maroon striped). And comfortable! Just wait till the new side car glides you over roads that look rough. Full-floating, semi-elliptic, 49-inch springs do that.

Yes, there's a real thrill waiting for you in these wonderful new Harley-Davidsons—a thrill that will make you want a "1924" more than anything else in the world. Take a free demonstration ride with your dealer and see.

Ask him about his Pay-as You-Ride Plan—most dealers offer one. Mail the coupon (below) for new catalog showing 1924 Harley-Davidsons in full color.

YOU NEEDN'T BE "AN INVENTOR"

in the technical or professional sense, in order to "cash in" on ideas of practical use.

One of America's great Industries is interested in your IDEAS—and will pay you for them.

You have heard of "Pressed Metal." It refers to any useful article that can be made by stamping from sheets of steel, brass, aluminum, copper or any practical metal, instead of by castings or other methods.

Pressed Metal is one of the greatest blessings that American mechanical genius has given the world. Its range of USEFULNESS, ECONOMY and CONVENIENCE to everybody is so great that, with a present volume of about $20,000,000.00 a year, it has barely begun to meet its possibilities.

The Pressed Metal industry includes many of the largest high-class manufacturing concerns in the United States, and through the Pressed Metal T. E. C., welcomes the co-operation of every bright mechanical mind in the country, on a cash basis.

"JUST A THOUGHT"—NOT A PATENT

Sell us a practical idea of some new and useful WAY to utilize Pressed Metal in place of other materials. The undersigned will promptly pay cash for every acceptable suggestion approved by our Engineering Advisory Board. FREE BOOK gives you the facts.

DO NOT SEND US PATENTS OR MODELS. JUST

Write for the Free Pressed Metal Booklet

It tells all the conditions and the amounts to be paid for the successful ideas, and also how to protect yourself against misappropriation of your creative thoughts by others. WRITE TODAY. (A postcard will do, but please make it easily legible so it can be properly filed and acknowledged.) Address

New Invention Sweeping Country Like Wildfire!

No wonder this amazing new invention is bringing fortunes to agents. All over the whole country this new device is doing away with old-fashioned methods of heating with coal stoves, ranges and furnaces. Already over $1,000,000 worth have been sold. You can readily understand why this new invention—the Oliver Oil-Gas Burner—is sweeping over the country like wildfire. It does away with all the expense of coal—making every stove and every furnace a modern oil-gas burner. Saves money, time and drudgery. Three times the heat of any other method. No wonder agents are riding in on the tide of big Oliver profits!

It Sells Itself

Agents find it no work at all to sell this amazing invention—the Oliver new improved Oil-Gas Burner. They just show it—taking only one minute to connect it—then light it. And the sale is made! This new invention is its own salesman. It sells itself! The Oliver Oil-Gas Burner is the most timely thing that could be put out. It dispenses entirely with coal and wood when both are now high-priced. It burns the cheapest fuel—oil. It saves a woman work now in times when she is looking for just such things. Just as much or as little heat as wanted, off and on instantly by simply turning a valve.

The Secret of Big Money

Of course, now that you know the facts you yourself can understand why this new invention is going over like wildfire! And you can understand why F.W. Bentley made $215 in one day. Why J. Carney made $1,000 in one month and why hundreds of other agents are cleaning up big too.

These men know the secret of big money. They know a good thing when they see it and they know that the time is ripe for this new Oliver improved Oil-Gas Burner. They know that this age of high-priced coal and wood makes it necessary for some substitute. They see ships and locomotives being run by oil and big buildings being heated by it. And they know that this is an invention that makes uses of every drop of oil as a fuel for every home—and yet does it so as to give more heat than coal or wood—is the thing they want to tie up to.

Big Profits Quickly Made

You too can use this secret of big money. You do not need to be a high-powered salesman. The Oliver's amazing features sell it for you. When people see it they know at once that it is the thing they want. You will realize that this is a proposition that will pay you as big money as it does others. We have a definite number of open territories which we are ready to dispose of to those who act quickly. Every territory allotted is filled with big-money opportunities. And this big money comes easily. Because not only does this invention practically sell itself on sight but when you have sold one this will sell several others as soon as your customer's friends and neighbors see it. And thru our special plan you get credit and commissions for every sale in your territory.

You can now make big money just by using your spare time. Note how N. B. CheIman made $43 in one evening.

Coupon Brings Full Offer

If you want to make at least $5,000 a year easily, mail this coupon now for our offer. We are not making any extravagant claims about this. We do not have to. We believe that your common sense will indicate a good proposition to you when you know about it. We want to give you the facts. Won't you write us? And by doing so quickly you will be allotted an exclusive territory with private selling rights.

The coupon will bring you the facts and will save you writing a letter. But mail the coupon at once.

Electricity Needs You
I WILL TRAIN YOU AT HOME

Stop right here. This is YOUR opportunity! Electricity is calling you, and the Electrical Business is in for a tremendous increase. But it needs more trained men—at big pay. By my Home Study Course in Practical Electricity I can train you for these positions.

FREE!
BIG ELECTRICAL OUTFIT
A fine outfit of Electrical Tools, Instruments, Materials, etc., absolutely FREE to every student. I will also send you FREE and fully prepaid—Proof Lessons to show you how easily you can learn Electricity and enter this splendid profession by my new, revised and original system of Training by Mail.

RADIO COURSE FREE
Special newly-written wireless course worth $45.00 given away free. Full particulars when you mail coupon below.

Earn Money While Learning
I give you something you can use now. Early in my Home Study Course I show you how to begin making money in Electricity, and help you get started. No need to wait until the whole course is completed. Hundreds of students have made several times the cost of their course in spare time work while learning.

Earn $70 to $200 a Week
You've always had a liking for Electricity and a hankering to do electrical jobs. Now is the time to develop that talent; there's big money in it. Even if you don't know anything at all about Electricity you can quickly grasp it by my up-to-date, practical method of teaching. You will find it intensely interesting and highly profitable. I've trained and started hundreds of men in the Electrical Business, men who have made big successes. YOU CAN ALSO

Be a Big Paid ELECTRICAL EXPERT
What are you doing to prepare yourself for a real success? At the rate you are going where will you be in ten years from now? Have you the specialized training that will put you on the road to success? Have you ambition enough to prepare for success, and get it? You have the ambition and I will give you the training, so get busy. I am offering you success and all that goes with it. Will you take it? I'll make you an ELECTRICAL EXPERT. I will train you as you should be trained. I will give you the benefit of my advice and 20 years of engineering experience and help you in every way to the biggest, possible success.

Valuable Book Free
My book, "How to Become an Electrical Expert," has started many a man on the way to fortune. I will send a copy, free and prepaid, to every person answering this advertisement.

Act Now! Good intentions never get you anywhere. It is action, alone, that counts. NOW IS THE TIME TO ACT.

This book explains how inexpensive soft woods may be finished so they are as beautiful and artistic as hard wood. Tells what materials to use and how to use them. Includes color charts—gives covering capacities, etc. It is the work of experts beautifully illustrated in color. Fill out and mail this coupon.

Tells How to Brighten Up Your Home

WELL finished furniture, woodwork and floors add materially to the beauty and attractiveness of your home. You, yourself, can easily refinish dingy, shabby, scratched wood. Our method involves practically no expense. All you need is a little time, a brush and

JOHNSON'S WOOD DYE

Johnson's Wood Dye is very easy to apply—it goes on easily and quickly, without a lap or a streak. It penetrates deeply, bringing out the beauty of the grain without raising it—dries in 4 hours and does not rub off or smudge.

Johnson's Wood Dye is made in fourteen beautiful shades, all of which may be easily lightened or darkened—full directions on every label.
Are you making $50 a week? Are you going to be making $75 a week a year from now? If you aren’t, or if you are not sure of your future, every word of this advertisement is meant for you. It points the way for you to realize your ambition. It shows the way to prosperity, to happiness and to independence. How? It shows you how you can get into the automobile business after 8 weeks of training and how you can become an expert with an expert’s salary.

Learn the Automobile Trade

The automobile business is an open, a big paying and an interesting field. Men of experience are constantly needed and right now thousands of jobs paying upward of $300 a month or more are going begging while the ideal men to fill them fool around with $25 and $30 a week jobs that offer a limited future! Those men are poorly paid, not because they have not the brains but simply because they lack the energy to ACT. The automobile repair man or electrician is sure of his job. He does not have to wait for promotion and advancement at the boss’s whim—because the boss needs him, more than he needs the boss.

How You Can Do It

There was a time when a man had to serve years as an apprentice in order to learn a business. He usually started by “sweeping out.” But those days are gone. Now, all the information the apprentice got in years you can get in a few weeks, right here in New York. For 14 years Stewart instructions have been making automobile men. For 14 years the Stewart School has been recognized as the leading school by automobile companies all over the East.

Personal Instruction

At the Stewart School men are not pushed thru and turned out as so many factory products. Each man is taught in the way he learns the quickest—and the best. YOU STAY WITHOUT EXTRA COST UNTIL YOU SATISFY YOURSELF YOU HAVE LEARNED EVERY DETAIL. Eight weeks is the minimum time required. SEND FOR OUR FREE BOOK AND LEARN ABOUT OUR GUARANTY.

Pay As You Learn!

You can finish your course in about 8 weeks of fascinating work. That means eight weeks of practical work with tools spent among the pleasant and inspiring surroundings in New York. Find out about our easy payment plan. If you want to earn living expenses while learning our Employment Department will take care of you.

Decide Now

Make up your mind now to investigate the opportunities in the automobile business. Send the blank below and get our big FREE BOOK. You will be under no obligations. The book gives just the facts and figures you need. It shows just what chance you have in the automobile business and just how you can get in after 8 weeks in New York.

Send for Free Book Now

Where will you be eight weeks from today? In the same old rut? Or will you be on your way toward a big job—a happy job and $250 or more a month? Every day of delay is a day lost. With a newer, bigger future before you your time is precious—send the coupon in now.

STEWART AUTOMOBILE SCHOOL
225 W. 57th St., Dept. 1777, New York, N. Y.

Please send me your free book that describes your school and the opportunities in the Automobile Business. I am under no obligation.
